I am accidentally picking up phone calls in the lower 1 GHz area, yet I know standard cellular freqs are down in the 800 MHz range. Are some cell services transmitting up this high now, or is this a skip or something?

hijax

The R-10 uses 4.8 to 16V. It comes with a 12V wall wart that
is clearly marked with ICOM. I don't know about the filter.

Source record: 64726

One thing to check first is whether the center pin of your antenna is snapped off and is missing, or sitting detached in the scanner's female BNC connector. If so, carefully take a needlenose pliers and extract the pin from the scanner. You'll have to scrap the antenna and get a new one. Don't know any way to fix an antenna with a broken center pin. Hope that's the problem, rather than anything more serious

Looking for opinions on the Icom IC-R3...is it a must-have or should this one be passed by (or at least wait until the price drops considerably)?

I did read the StrongSignals review; links to other reviews would be welcome as well.

Thanks,
Doug

Unless you can grab one for under $300 I would avoid it. it is a decent scanner and you can watch TV on it. The batteries die quickly with the video screen on. Plus like the R2 and VR120 it does not have a numeric key pad and that makes it a pain to program unless you pay the extra $ for software and cable. The strong signals pretty much says it all. The R3 is not a serious scanner but rather an expensive toy.

13. Atlanta Radio Clubs' Hamfest June 2nd

Newsgroup: rec.radio.scanner
Date: 2001-06-01 04:00:44 UTC
From: rychard@mindspring.com
Message-ID: <3b171328.5365906@news.mindspring.com>
Source record: 64730

Hey all,
The Atlanta Radio Club's annual Hamfest is Saturday June 2nd. 9:00 Am
to 3 PM.
It will be at the Jim R. MiIller Park in Marietta Ga. Talk-in 146.82
Admission is $5 , under 16 free.
No matter if you're looking for a new rig ,a used rig,want to swap
rigs.Maybe your looking for antenna supplies: wire,insulators,mast,
towers,etc. It's there.
Maybe your looking to unload all those extra radios in your
shack,this is you chance. Ham gear,Shortwave radios,scanners,
books,its all there.
Don't forget the computers,monitors,software,components.
Don't forget to dig through the Boneyard/Tailgate/Flea Market Areas.
If you live anywhere near Atlanta ,and love the radio hobbies,you
will not want to miss this.

Sponsored by: The Atlanta Radio Club
Gwinnett Amateur Radio Society
Paulding Amateur Radio Club
and the ARRL.

More info at http://www.saf.com/arc/atlfest.htm

Simple Directions: Take I-75 north of Atlanta to Windy Hill.

Go west on Windy Hill to Austell Rd.

Go to your left on Austell Rd a short distance,look
for Callaway Rd on you right.

Turn right on Callaway Rd. and travel about 1 mile

Jim Miller Park will be on your right.

See You there.

14. PRO-51 Updated Cell Mod?

Newsgroup: rec.radio.scanner
Date: 2001-06-01 04:01:42 UTC
From: mark12085@aol.comSPAMMO
Message-ID: <20010601000142.18192.00001768@ng-cc1.aol.com>
Source record: 64731

There is a mod floating around out there for Pro-51 and similar Uniden scanners that sticks a blocked 800 mHz channel into channel 23; however it seems as if that does not work on my newer model (1A6). Is there another mod that will?
THanks.

Yeah, and WHY even make ANY scanner nowadays without trunking capabilities?? Boy, would I EVER fork out the cashola for a multitrunk-tracking version of a 1000 channel, unblocked, slightly bigger version of an 'R3. Oops, sorry; just a perfect world fantasy of mine.

Ok. This is about two page long if printed from Wordpad.

ANDREW CHEATLE'S CAL EXPO FREQUENCY LIST
Note: These may not necessarily be in use. There may be some innacuracies. Mea Cupla.

Police
453.150 & 474.840 Seem to be the same. These are the most active, on during
major events and sometimes at other times. Most active during the State
Fair, every year since at least 1998.

Maybe these will come up ... only seem to be used near or during the state
fair or other major events:
453.350
453.800
479.850
482.500 (I have only observed this on July 4th, 2000)
471 (or is that 491?).537 I have only observed this at the Sacramento County
Fair, which used police in the uniform of one of the school districts.
172.500 heard in 2000 Fair, a vendor was attacked- is a police freq, or
vendor support?
also check nearby police frequencies, such as 468.350, which I presume is
for the city police stationed in the Arden Fair Mall

Vendor Mic Frequencies: (only heard on grounds of Cal Expo)
Sac County Fair 2001
169.445 kitchenware vendor
171.845 another vendor
CA State Fair 2000
169.440 cookware vendor (maybe two vendors on this freq?), sells the Ginzu
knife
171.940,171.870, &171.905 Ladder Salesman
167.925 "Sweepa" booth
172.990 Another vendor
498.425 ?
171.500 Belender Machine Salesman
494.200 "Wing" ladder sales booth

Vendor Support (not mic frequencies)
486.287 Food Sales support? (1st heard in 2000)
486.325 (1999 at least) Drink Sales support?

Carny mics (Unless noted, only heard in 2000, at the fair itself)
472.350 & 450.650 (only heard in 1998, with excellent range, over twenty miles away!) NBA Basketball basketball dunk game
170.245 Water ballon gun game?
169.505 Another carnie
171.845 Ball tossing game
151.740? Another ball tossing game?

Performers/Non-selling Exhibitors mics (only heard at Calexpo)
CA State Fair 2000
493.750 Sky Shivers, of the Sky Shiver's Goat Show at Goat Mountain (now gone) mic
494.512 "The Iron Horse" show, Clown's mic
494.112 Pontiac/GM exhibit of their vehicles, between Main Gate and WaterWorld main gate- a GM/Pontiac represenative woman's mic
Sacramento County Fair 2001
171.840 "Cook's Racing Pigs" show/exhibit announcer mic, Cook presumably (not the Poker Pavillion show of the CA State Fair that existed before 2000; this is privately funded and organized)

Performer Support
453.750 CA State Fair 1999 at least (or related personnel)
475.500 CA State Fair 1999 at least (various sorts of maintenence, including gates?)

Video Audio?
458.512 This was heard briefly during CA State Fair 1999, sounded like what might accompany one of the video presentations for one of the exhibits.

Paging
482.? (Heard during 1999 CA State Fair)

Amatueur Radio heard at the CA State Fair 2000
467.637 A girl talking to her mom

Probally Amatuer Radio
467.587
467.312
467.712
467.587
475.425 "No one came to get our beatles"- contest or exhibit participant?
484.362

Live TV/Radio remotes (also used for other events)
450.750 KRXQ "98 Rock" live remote at 2000 CA State Fair
455.700 "Cool 101.1" & "Arrow" combined live remote (1999 CA State Fair)

TV/Radio frequencies not used so far at Cal Expo-
171.775 Radio Disney Sacramento events (not on air- a mic for event only, used at least once in 2001)
455.750 "KNCI" 105.1 FM live remote

Also check news crew frequencies for occassional coverage (such as 450.100 KCRA news technical crew), 485.425 KCRA News, 450.850 (KFBK traffic ground

crew), 450.225 ("Commander Bill" KFBK), also 450.612, etc.

WaterWorld USA Sacramento
472.087 Lifeguards? (only heard in 2000 at Cal Expo)

"The Point" amusement center
567.562 Employee (only heard at Cal Expo in 2000) Very interesting talk.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
http://www.grove-ent.com but views expressed in this
article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire

engines, ambulances, airplanes, armored cars, trains, taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a

personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. http://www.grove-ent.com

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2042 and PRO-2006 base/mobiles, the Uniden/Bearcat BC780XLT, BC895XLT, BC245XLT, SC200, and Radio Shack PRO-92 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for

extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published on the CARMA email list, carma@qth.net. You can obtain a free electronic subscription to the CARMA email list. For more info, see:

http://www.qth.net

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Most meetings are be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises http://www.grove-ent.com for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's

book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

You can query FCC databases directly from this web page: http://www.fcc.gov/searchtools.html

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://w5gb.nmsu.edu/kc5kto/,
http://www.fordyce.org/scanning/, and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'.

(See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of

information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army

Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each

equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals

weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises
http://www.grove-ent.com but views expressed in this article
are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase

most of my receivers at hamfests or horsetrade with other radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine, published by Grove Enterprises, http://www.grove-ent.com

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't

interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large

Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered at your local Radio Shack store. Each Radio Shack store has a book containing frequencies and stock numbers. The crystals are mailed to your home within 10 days.

You can also order scanner crystals from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 941-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in
a separate article, entitled "Scanner Radio Review Briefs."
You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises
http://www.grove-ent.com but views expressed in this
article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated

circuits. The radio must have been made after the most recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Multec Communications repairs several model Uniden scanners, but not Electra models. (http://www.rfwiz.com or email multeccomm@rfwiz.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature

(logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two

BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, http://www.grove-ent.com but views expressed in this article are his own.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)

25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by Reach Electronics. Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by
Federal Signal and sold by Brinkley Electronics:

Brinkley Electronics
P.O. Box 502
Wallburg, NC 27373
(336)769-2902
FAX: (336)769-4029
email: sales@brinkleyelectronics.com
web page: http://www.brinkleyelectronics.com

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 2001 - ILLINOIS
last updated April 4, 2001

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Ralph Zancha, and ARRL for providing some of the information.

JUNE 2001

Jun 3 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Jun 3 (Sun): Princeton - IL Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $7 (ouch!) at gate. Talk-in 146.955, -600, PL103.5 Hz. info: tel. 1-815-856-3773, (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 10 (Sun): Wheaton, IL - Six Meter Club of Chicago. DuPage County Fairgrounds. 2015 Manchester Rd (north of Roosevelt Rd, east of County Farm Rd). Gates open at 7 AM, buildings open to public at 8 AM. Admission $6. VE testing. Talk-in on 146.52 and 146.37/97 (107.2 Hz PL). Info: http://cyberconnect.com/orion/hamfest.htm or contact Joseph Gutwein, WA9RIJ, 7109 Blackburn Avenue, Downers Grove, IL 60516-3925. Tel: 708-442-4961 . Email: wa9rij@mc.net

JULY 2001

Jul 7 (Sat): Oak Creek, WI - South Milwaukee ARC. American Legion Post 434, 9327 South Shepard Ave. Admission $5. Starts at 6 AM. Talk-in 146.52 MHz (WA9TXE). Info, call (414)762-3235.

Jul 8 (Sun): Peotone, IL - Kankakee Area Radio Society, Will County Fairgrounds. I-57 to Peotone exist 327 (East). Free parking. Talk-in 146.94 MHz repeater. http://www.w9az.com. Admission $6. Info: Chip Moore, K9IOC, 289 S. Euclid Ave., Bradley, IL 60915. Email: karsfest@yahoo.com

Jul 15 (Sun): Washington, MO - Zero Beaters ARC Hamfest. Bernie E. Hillerman Park (Washington Fairgrounds) Free parking. Free admission. VE exams. Talk-in on 147.24 MHz

repeater. Info: Keith Wilson K0ZH (636)629-2264, fax (636)629-1196. Bob Goza W0BOB (573)484-3718, w0bob@arrl.net. http://www.yhti.net/~w0bob/zbarc

Jul 22 (Sun): Sugar Grove, IL - Fox River Radio League Hamfest. Waubonsee Community College. Rt 47 at Harter Rd. Admission $5. http://www.frrl.org/hamfest.html (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2001

Aug 5 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Aug 12 (Sun): Peotone, IL - 67th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $5.00 in advance with double stub, $6.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Robert Nelson, WB9FWR, 1720 Vollmer Rd., Flossmoor, IL 60422. (708)756-7984, email WB9FWR@aol.com. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 26 (Sun): Joliet, IL - Bolingbrook ARS Hamfest. Inwood Recreation Center, 3000 W. Jefferson St (Rt 52). Outdoor flea market setup at 6 AM. Admission $5. VE testing. Talk-in 147.33+ MHz and 224.54- MHz repeaters Info: Tom Ballard N9LJY, (630)739-3740. (Small to midsize hamfest with good restroom facilities - AJ9S)

SEPTEMBER 2001

Sep 2 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Sep 14 - 16: Peoria, IL - Peoria Superfest 2001, Peoria Area Amateur Radio Club. Exposition Gardens, Peoria, Illinois. Amateur Radio, Computer and Electronics Show. Friday Flea Market Preview--3 PM until dark; Live Music Saturday night in the South Garden Pavilion; FCC Testing Sunday 10 AM until 1 PM; Gates open 3 PM Friday and 6 AM Saturday and Sunday. Commercial buildings open Saturday 8AM until 4:30 PM and Sunday 8 AM until 3 PM. Advance tickets $5 with two stubs; $7 at gate with one stub--all tickets good for the weekend. Outdoor fleamarket space can be reserved in advance for $5 plus $5 for each admission ticket. Space and admission tickets are good for the entire weekend. Setup: Outdoor -- Friday 10 AM and 6 AM Saturday and Sunday. Indoor Commer-

cial Vendors -- on Friday 2PM until 9 PM (setup only), =
Saturday 6:30 AM and Sunday 7:30 AM. Talk-in: 147.075+.
For more info, see http://www.w9uvi.org ; e-mail for tickets
and space reservations to w9uvi@arrl.net ; USPS mail to
Peoria Superfest, PO Box 3508, Peoria, IL. 61612-3508.

Sep 22 & 23 (Sat & Sun): Grayslake, IL - Chicago FM Club
Radio Expo. Lake County Fairgrounds. Admission $8, good
both days. Ladies program - Arts and crafts. Grounds open
Thursday at noon. Flea Market open both days at 6 AM.
Exhibit buildings open Sat 8 AM - 4 PM and Sun 8 AM - 3 PM.
VEC testing. Free camping and parking. Talk-n on 146.16/76
MHz (107.2 Hz PL). Info: http://www.chicagofmclub.org.
Tel: 630-628-1501 (the biggest and best hamfest in northern
IL - AJ9S)

OCTOBER 2001

Oct 7 (Sun): Gurnee, IL - Computer Country Expo (see below).
Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

NOVEMBER 2001

Nov 4 (Sun): Davenport, IA - Davenport Radio Club. Iowa
National Guard Hanger, Mt. Joy Airport. No tailgating.
Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 4 (Sun): Gurnee, IL - Computer Country Expo (see below).
Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

DECEMBER 2001

Dec 2 (Sun): Gurnee, IL - Computer Country Expo (see below).
Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of
DuPage, Main Arena of the Physical Education Building Park
Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5
admission with card, normal admission $6.00. Opens 9:30 am
- 3:00 pm. See http://www.computercentralshows.com web
site.

Giant Computer shows are held by Micro Media, Inc. Shows
are usually held at the Tinley Park Civic Center, 185th St.
& Harlem Ave., Tinley Park, IL or at the DuPage County Fair-
grounds, County Farm & Manchester Rds., Wheaton, IL. Admis-
sion is $6. for adults and children under 12 get in free.
Show hours are 9:30 AM - 3 PM. To get on the mailing list
or get more information, call (708)974-3123. See
http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held monthly from 9:30 AM to 4:00 PM. Admission is $6 with free parking. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Held in the Ballroom of the Holiday Inn, 6161 W. Grand Avenue, Gurnee Illinois. For info, visit the web site at http://www.ccxpo.com.

last changed March 21, 2001

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 2001 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the
RCMA Newsletter, December 1988. It may not be reproduced
in whole or in part on CDROMS, in bulletin boards,
networks, or publications which charge for service without
permission of the author. It is posted twice monthly on
the USENET groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is
difficult to use because of too much hysteresis. The
American Heritage Dictionary of the English Language
defines hysteresis as the:

o "Failure of a property changed by an external agent
to return to its original value when the cause of the
change is removed."

It's like having play in a car's steering wheel, or
backlash in a gear set. Too much hysteresis in a squelch
circuit forces one to keep the squelch at a tighter
setting, missing weaker signals when scanning or searching.
The squelch hysteresis problem was first addressed in a
1984 article about the Radio Shack PRO-24 crystal
controlled scanner.

Why do engineers design these circuits with any hysteresis?
Basically, hysteresis prevents weak signals from "popping"
the squelch open and closed rapidly, which would be very
annoying to the listener. A squelch circuit with hysteresis
requires a stronger signal to open the squelch than it does
to keep it open.

Models cursed with too much hysteresis include the
Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003,
PRO-2004, and others. Don't despair, the fix is simple for
most radios. I've successfully reduced the squelch
hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K
_____	_____

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
http://www.grove-ent.com but views expressed in this
article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024. Grove Enterprises http://www.grove-ent.com occasionally sells manuals, too.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
http://www.grove-ent.com but views expressed in this article
are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements

receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.

Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900

memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100

channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10

priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1977 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather

alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There

three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility

not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image

rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The

Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per

channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date.

Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search.

No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including Delphion's server:

Look under Milcom>CONUS at http://www.ohioscan.com
I believe the owner used to live in Florida, and while the info might
be a little dated, it will be a good starting point.

>
>Anyone know the freq. for F-5 Stuart FL PD F-5.? Hear go to '5' all the time,
>apparently there car to car channel.
>Thanks.
>

These are the most current list of Stuart, Florida Frequencies I am aware of;
though I am not sure which one would be F-5:
154.2050
154.9800
155.0250
460.2750
460.3250
465.2750
465.3250

Also try the following Link:
http://www.cityfreq.com/fl/stuart/

Main Page of City Freq.:
http://www.cityfreq.com/

By adding these and other located Frequencies to the Scanner, you can possibly
figure out which one is F-5: by way of context of the Communications/Voices.

If you find further, please post for others to use.

Hope this helps,

Palm Beach Scanner

Hi all,
I just got a pro-2022 and it looks like someone had a party inside of it,
the antenna was gone and there were no screws for the case.
Well no big deal they can be replaced.
Now for the real problem the LCD display.
ALL of the display lites up so it's not readable the back light works and
the scanner works.
So I really could use some help!

Thanks
David

While you are certainly right, technically, many who read the scanner newsgroups don't read the rec.radio.swap newsgroup. Several of my radio purchases have been impulse buys after seeing the radio listed here. If the postings are properly labeled as FS, FA, FT, or FS/T, just who is being hurt here? If you don't want to read them, then ignore them. Is your life so fulfilling otherwise that this is the only thing left for you to worry about?

Let's give it a rest, people!

0.1 - 1856 (continuous) MHz receiver. AM, FM, WFM modes. 100 memories, 20 programmable scan edge channels, and 1 priority scan channel.

It is in very good condition and works perfectly. The only noticeable "use" is some case scuffing on the sides where it was in the mounting bracket.

Please let me know if you are interested. I would like $375 + shipping, and I accept PayPal, Billpoint, Paydirect, or money orders.

prXSPAMX1902c@yahoo.com (remove XSPAMX to reply). Thank you, Howard

Well... where should I start... I'll make this short and sweet.
He did actually specify that the gunlaws don't affect canadians uninterested in firearms. Not canadians period.
So before you start getting your wires crossed, try reading what people actually write instead of judging them by assuming they say something that's not been mentioned at all.
Or to use a phrase which applies to this; Objection Your Honor, assumes facts not in evidence, or redirect outside scope of direct.
I allready know I'm not a lawyer so I don't need you telling me I'm not... just trying to convey a point here.

What's the problem here?
Once your govmt. wants your car or your whatshammecallit they still know
where to get it.
That's not a gun issue at all, that's just a fact of life. It's called being
part of the society in general.

Historically, the US government has not been very jumpy and gone out to
interfere with people's possessions and lives, save a couple of isolated
incidents like the MacArthur era and Manzanaar and stuff like that. Those
were at least partly in response to public outcry though... so it's still a
matter of being part of the society in general. Living in a country half of
which was built by cowboy types must have screwed with your head. There are
cultural differences, and what's right where you live may not be right where
someone else lives, but that's no reason to argue about it.

I actually belive they are capable of basic math in Canada as well.
I'll just assume they know that $300CAN is slightly less than $210US.
Likewise, I'll just assume that the expensive argument is when they must pay
like $350CAN for something that's just $200US in USA.

The LCD is typically connected to the circuit board via a connector
strip, a thin piece of conductive foam with insulating breaks every 0.1".
Each segment of the strip connects a printed circuit pad on the board to
a corresponding conductive element on the LCD glass. When you put the EL
panel in the display sandwich, you may have mis-aligned the connector so
that some of the traces aren't making contact.

Yeah, but if the gun isn't registered in the first place, it's a lot harder for the government to track down. That's why many of us (and I don't own any guns anymore) are opposed to gun registration.

True, BUT, the actions taken by the U.S. government against U.S. citizens of Japanese ancestry after Pearl Harbor show that the potential is there. What was done to these people, many of whom were native-born children of naturalized citizens, violated about a half-dozen of the U.S. Bill of Rights. But it was done anyway. Given that our government has grossly violated the basic constitutional guarantees before, can you blame some people for believing that it is capable of doing so again in the future? As for the "response to public outcry" statement, aren't all government officials required to uphold the Constitution? I feel that should take priority over "public outcry". We are supposed to be a country ol laws, not emotions.

No. Sprint PCS is CDMA 1900. The other US systems, digital and analog,
are all in the 800 MHz range. Besides, all that stuff is digital; there's
no way he's picking them up on a scanner, "accidentally" or otherwise.
Must be images from AMPS analog cell.

Sounds like a cold solder joint. With the rig on take the eraser end of a pencil and press firmly on the solder joints. If the numbers come back that is the cold joint. Re-solder it and work your way across. I hope that helps.

Having has an R10 fior awhile, the R3 is a pain since there is no direct freq entry. One other thing that ICOM leaves out is that it has restricted 800 beyone the cellular band. Specifically, the unblocked version will not receive 866-869, at a minimum. This is not US cellular spectrum and is US Public safety radio spectrum. Someone needs to tell ICOM to fix their mistake.

Source record: 64680
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have the Yaesu VR-120 and love the power in such a little device, though it has its own quirks just like any other scanner.

In looking for product information and reviews on the web, you will find a 10-to-1 ratios of articles, with the Icom R2 leading hands down. Don't know if it's because of the length of time one product has been in the market over the other, or the assumption by many that Icom is somehow better.

Having never owned an R2, I cannot provide an experienced-based contrast/comparison. I can only report what the Yaesu appears to offer vs the Icom by both being an owner of the VR-120, and in reviewing the factory specifications of each:

1. They are almost identical in physical size and frequency coverage.
2. Yaesu as 640 channel memory, Icom has 400.
3. Yaesu has channel labelling to remind you what you're listening to, though it is only 6 characters (making for an abbreviation nightmare). Icom has no channel labelling at all.
4. Icom is PC programmable. Yaesu is not. 'Nuf said. :-(
5. With only 4 main function keys, you are required to make several karate-move-like combinations of button presses in order to do certain things on the Yaesu. Don't know what the interface is like on the Icom, though it only has 2 more buttons than Yaesu. Maybe it's just as difficult?
6. Yaesu offers a channel counter, which allows you to find strong signals in your area without knowing the exact frequency. This I use ALL THE TIME. Icom does not.
7. Most other capabilities very similar between the two: attenuation, selection of tuning steps, priority channels scan, sleep timer, earphone jack, BNC antenna, beep tones, weather resistance, belt clip.
8. No AC adapter capability on the Yaesu, therefore no recharging circuit. Icom allows for AC and recharging of Ni-Cad batteries from within the unit. But I bought a NIMH charger kit and 4 AA batteries for $15.00, so I end up with rechargability afterall, and longer battery life than Ni-Cad.
9. The audio on the Yaesu is not very loud at full setting, making it difficult to monitor in a noisy environment. I guess you could amplify the signal from the headphone jack and use and external speaker if you wanted to get right down to it.
10. CTCSS on the Icom. Not on the Yaesu.
11. Price is very similar. Both are in the $160.00 - $170.00 range.
12. Neither offer trunking, though there are currently NO trunking transmissions taking place in our community. So I'm not missing anything. You'd just have to see what you'll be missing in your neck of the woods if you purchased a scanner without it.

In conclusion, it would be difficult to decide which features are more important: channel counter vs PC interface, labelling vs no labelling, AC vs no AC, etc.

It is a tough call, but I'd say that Icom has made alot more noise in the industry than Yaesu in the micro communications receiver business.

Is there a reason? Someone in the group will speak out I'm sure. :-)

The Icom R2 is easy to program manually. It is also very fast to find any
frequency.
I really don't understand why anyone would complain about tuning the Icom
without a keypad. Having frequency files saved on computer might come in
very handy though.

67. My final opinion on this eBay FA question.....

Newsgroup: rec.radio.scanner
Date: 2001-06-02 18:57:04 UTC
From: dconti2@bellatlantic.net
Message-ID: <3b19338f.10785232@news5.bellatlantic.net>
Source record: 64683
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I am offering this final thread on the recent eBay FA postings controversy in an attempt to be a stand up fellow and admit where I was wrong.

After digesting all the information coming in from all sides, I have made the personal decision that those complaining to eBay about my FA postings were, IN PART, justified in their complaint.

It appears to me that posting the same FA thread in numerous groups at the same time IS tantamount to SPAM, and not fair, and basically quite redundant to the readers as well.

If I have upset anyone in the scanner groups as a result, I apologize.

In the future, the ONLY place I will post a FA listing for a radio related product will be in rec.radio.swap where I believe it belongs, and I am sure many others here will agree.

My listing will start with FA, and also include EBAY in the header. Those not wanting to see such postings will set their filters accordingly. This should appease those complaining to eBay as well as hopefully set a new "understand" among us in the radio groups as to where these things REALLY belong, and leave Alt. scanner and rec. scanner for scanner related topics.

Now, if we could only be as diligent in cleaning up the rest of the unnecessary SPAM on the groups, we would really have something.

I have a new Kodak DC215 Zoom megapixel digital camera for trade or sale.
Unit comes with all accessories, including serial cable, video cable, 8MB
CompactFlash card,, strap, 3 CD's with software, manual and PCMCIA
CompactFlash reader (NEW). I took out of the box to take a few photos only.
Unit sells for $299 with 4mb card only. This camera is Blue, unlike the
other gold or silver models.

Follow below link for full KODAK details
http://www.kodak.com/US/en/digital/genInfo/dc215.jhtml

I would like to trade for a Euro Version IC-R10, ALinco DJ-X10E, FT-50R..etc

Cash offer better than $225 accepted also. E-mail me for photos or other
info

Why would you want to listen to CB radio over the internet. Imagine
they hooked up the ch1 UHF repeater for Sydney to a web server.
I don't htink sitting and listening to a bunch of morons being just
that, morons would make it interesting listening myself.

Davo

I don't agree Dan. Many people that read rec/alt.radio.scanners don't
read rec.radio.swap. rec.radio.swap is a spam pit and very hard to wade
through at times.

A FA in the rec/alt.radio.scanner IS about and IS related to the scanning
hobby. It is not off topic.

Guess we don't agree. Oh well, the world continues to spin and filters still resolve the problem 95% pf the time. Life's a bitch ain't it? :-)

I got the ic-r3 for $550 with a li-ion battery. The 10 hour charge took forever, so I special ordered the 2.5 hour charger, which cost me an extra $90. Overall I must say it's a very nice scanner overall, triples as a tv and a shortwave, too. Have heard of the "strong signel" thing, but never seen(or heard) any part of that on mine. The tv screen is much sharper and much more pleasent to look at than one of the low-res "regular" postable tv's. Can even read fine print. 'cause the tv screen really eats batteries, it really pays to have the li-ion battery, can get up to 2 hours on a charge.

since it has no direct entry, I got used to it though, it goes like this:
say I want to tune the local poliece on 471.51250 .
1) I tune to the band I want by pressing <- or -> to the desired band.
2) I refine it buy holding down "func" and turning the dial to 471 mhz.
3) then I let go of "func" and continue to turn the dial to tune to 471.51250

then to program that frequency, I press and hold "V/M SKIP" for a few sec until it beeps, turn the dial to the desired channel, and press and hold "V/M SKIP" again until it beeps.

I want to explore ham bands and just old random freq's. The OPD
still runs at the old conventional 155.055 and isn't trunked. Don't
know what is, but not sure I would miss much? Let me know if I am
wrong. Looking for the "most" frequency to explore. Thought a
"wideband" receiver would be best. Don't know anything about trunk
scanning, been doin it the old way for 30 years, ma have to learn?

My mistake.

The R2 comes from the factory with Ni-Cads and a charger. You cannot charge batteries from with the R2 itself.

Also, there is no mention anywhere of PC control becoming available soon for the Yaesu VR-120. Where did you get your information? I think we would all be excited to hear.

Source record: 64608
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Ok, so I'm a little lazy in not thoroughly reading the manual before asking this, but being a guy I don't think we're allowed to really read manuals anyway! :-)

I'm used to the Radio Shack scanners, where you put in a bunch of frequencies, block out the ones you like but don't want to be a part of the active scan group, and then hit the "scan" button. Like spinning a roulette wheel, the thing takes off until it finds something and then stops so you can listen. Then when things are over, it starts up again.

As the Yaesu VR-120 is more of a communications receiver than a typical scanner, this method doesn't seem to be overly easy to do - especially with the blocks.

Can anyone simplify the process? Also, can you clarify the memory banks? Can you dump a variety of freqs you like into banks to sort of categorize your listening to certain groups of channels (like an all-police bank of freqs for example), or is this limited to certain freq ranges in a bank?

Hope that made sense. It's late!

Thanks!

Such a record is not needed. A person can keep track of the serial
number themselves - then report the firearm when it is stolen.

Registration is for only one purpose - so the government can find the
firearms whenever they wish.

Message-ID: <9fcm6p$1eq$1@bob.news.rcn.net>
Source record: 64612

There is some sort of radio system at my school. The antenna for it, supposedly a station master, is mounted on top of a light pole facing the football field. At the base of the pole are two locked cabinets with General Electric emblems on them. I suspected it was some sort of repeater but I stood by it with a freq. counter and never got a single hit. I might try a field strength meter next.

However, since it is on gov't property, is there any way I can find out what it is for? I thought about calling the building manager and saying I am a ham and that I would like to know what the device there because of interference, or something.
Would there be any record of what these device is anywhere? I would like to avoid contacting anyone about it at the school since they might give me crap about it. Does anyone have any suggestions as to what I can do? I am super curious of it since it just sits there without any markings on it. I thought it might have something to do with the buses but the antenna looks like something for VHF and the buses are on 800. Any suggestions are welcomed and BTW, I am in Virginia (fairfax county). Thanks!!

96. How Repeaters Work webpage

What is the best discone for this range? Do I need the low band extender to help performance? How does the Radio Shack version compare to others (Diamond, Icom)?

Frank

Dan,

I have been in the radio industry for better than 35 years. This is the first time I have ever heard anyone refer to a radio system using the terms HEMI and DEMI for simplex and duplex operation.

In looking these words up in the Webster's dictionary, I still think that your choice of words is rather in the wrong direction. If your going to try and help those that may have a fuzzy understanding of radio systems, you may be better off using the terms and words that the industry as a whole use.

Other than the choice of HEMI and DEMI, I think you have done a good job of putting your web page together. The art work is great.

Jim

Why don't you just go ask the maintenance department at the
school. I go and ask questions like that all the time. Just say
that you noticed the cabinets there. Your wondering what they
are used for.

If you look at the antenna, are there any metal radials at the
base? If so, the length of them will give an indication what
frequency it is for. If they are about 6 inches, it is UHF. If
they are about a foot long, it is VHF. If they are none, then
can't help you. Not all antennas use the external radials.

Hope this might help just a little. The radio there might be for
the school use, controlling a pumping system, used by the
maintenance people, or who knows what.

Jim

Well, as you can see if you go back and read what I typed, I CLEARLY stated that I had NEVER used it myself, and that it MAY be interesting.. In the context that I used the word, it could mean just about anything. Interesting as in really dumb, real cool, totally off the wall, anything... Everyone has a different opinion as to what is interesting... Is was a very vague and general comment...

I was giving the guy what he wanted, nothing more, nothing less... I never asked for your opinion of the subject.. If you were looking to make such a reply, it should have been to HIM, not me, as HE was the one asking about such a sight.

>easy.

First of all, all you gun-toting morons from both sides of the border, go to some other NG to hash out your paranoid, red-neck, pickemup truck views.

The only reason there seems to be more cell phone "freedom" up in Canada than here in the States is their legislative bodies haven't been bought out by the cell phone lobby. Our has.

Look at all the jamokes that bought the story that their conversations on these technological wonders would be private and inexpensive. We should know that neither story is true. People loved these things because they were a status symbol, nothing more, nothing less.

These yuppie-wannabes became suspicious of this sales pitch when people like us warned them NOT to disclose personal information on these phones, because they could be intercepted. The cell phone people said that was bull shit. No way that could happen.

But the CTIA became wary that maybe once them status-seeking jamokes found out that they may find it true, they statrted lobbying Congress with millions of dollars (US not Canadian) and literally bought the rights of the Public Airwaves and made it illegal for someone to buy a scanner able to intercept the cell calls of all the yuppies ordering pizzas.

Now digital phones are coming out. This is done to prevent us from intercepting calls. For now. We'll catch up. Bring on the cell jammers so the soccer Mom, yappin' on da phone with Buffy, while driving her SUV weaving on streets can be cut off from from this electronic umbilical cord.

But, if you notice......the FCC has made it illegal to own a jammer. Surprised? The CTIA just "donated" several million $$$US to the FCC favorite cause .. Congress. Japan allows them, most countries in Europe allow them, more countries do NOT disallow them. This is because their governments see the horrible misuse of these phone in public places, churches, restaurants, hospitals and movie houses by those who feel they are more important than others around them.

BTW, I do own a cell phone. I NEVER use it in public places or while driving, so tho those who think Im jealous or cant afford a phone....have no reason to think that.

It seems to me that the reason that Canada allows cell phyone monitoring is because the cell phone industry has not yet sensed it has got a whole lot to lose in Canada. Once they do, however, the money will flow to Ottawa as quckly as it did Washington, and there will be similar laws enacted faster than you can say "Canadian Bacon"

Just my 2 , er, gee, 6 cents.

john

Yes, it has short radials. I thought about asking the building manager or maintenance manager but I might get some crap from them for asking some kinds of questions. My school is way to paranoid about anything for obvious reasons. The antenna radials are short, maybe about a foot and I gave my description to someone on the ham bands and they told me it could be a VHF Phelps-Dodge Station Master Antenna.

There is a company in The Netherlands that is developing software for VR120.
They also wrote software for icom R2 and R3 and several AOR's.
Got the info from the designer himself who posted in the VR120 group at
yahoogroups.
Website is http://www.butel.nl

It is an excellent antenna IF you can find a pole that matches its homemade, 3'rd market base
and you don't tighten the disk too tight around the cone/disk assembly.
If you do, you will notice that you will get an instant short circuit in your antenna.

Sorry, forgot to explain why you get a short circuit on the super discone.
It's because when you tighten the disk too (spin it too tight) it pulls up the inner conductor of the PL-259
connector. Eventually the inner conductor pulls up so much that it meets with the base head of the cone/ground
and shorts out.

123. FS: BC9000-XLT Uniden Scanner

Newsgroup: rec.radio.scanner
Date: 2001-06-03 21:29:40 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <8%xS6.25037$DG1.4183141@news1.rdc1.mi.home.com>
Source record: 64640

FOR SALE:

Uniden Bearcat BC9000-XLT Scanner

Complete, with OPTIONAL CTCSS Tone Board, "Like-New" $250.00 shipped within U.S.

This models covers virtually every frequency from 25 MHz to 1300 MHz (less cellular). It receives military frequencies not found on most other scanners. You get 500 channels organized in 20 banks of 25 channels each. A VFO control (manual tuning knob) enables fast selection of memories or frequencies. TurboScan allows you to scan up to 100 channels per second and TurboSearch lets you select either 100 or 300 steps per second when searching VHF frequencies. The automatic store feature searches out active frequencies and automatically stores them for you in an available memory location.

Selectable mode allows you to change the default receiving mode (AM, FM-wide or FM-narrow) to hear all the action.

Advanced features include: Two Line Alpha LCD, Delay key (2 seconds), Channel Lockout, Data Skip (the scanner skips over non-voice channels), Backlight Dimmer, High Cut Audio Filter and tape recorder activation.

External jacks include: BNC antenna, external speaker, line out, aux jack and DC power.
The BC9000XLT comes with: AC adapter, telescopic antenna and Owner's Manual. Size: 10.5x3.5x7.375 inches. Frequencies covered: 25~550MHz, 760~824MHz, 849~869MHz, and 894~1300MHz!

New Orleans uses an Ericsson EDACS system for all public safety
communications.

For the latest information on state of Louisiana trunking systems, see:

http://www.trunkedradio.net/cgi-bin/display.pl?state=LA

JPSO recently went to an APCO-25 digital system which cannot be monitored,
but many of the local fire departments are still using the older JP analog
system which provides good monitoring.

The State Police use an analog Motorola Smartzone system, which covers the
entire state.

>
>

Another one of those $64,00 questios => "Is there anything better coming out?"...
I don't mean to be carcastic but => Of Course There Is... It's just a matter of time and waiting around for it to get here... In days, weeks, months or years to come, the 780-XLT will be "Old News" but for now it appears to be "All The Rage" in the scanner world...

I say this even though I don't own one but plan to buy one as soon as they are released here, in about 2 weeks - as Uniden are still conducting compatibility tests with our trunking system...
The buggers wont even sell me one regardless of whether or not the trunk tracking works. They say "It's not within their policy to do so". The sales guy sounded like a robotic politician when he answered with that line.

I have been reading every snippet of info I can on the 780-XLT scanner and am convinced that it may be "The Scanner of The Moment" to buy. Simplicity with sophistication is what Uniden appear to have built this scanner around.

I recently bought the new Yaesu VR-5000 and despite the useless manual that comes with it, I love this scanner. It is probably the most sophisticated (not necessarily the best though) scanner on the market at the monent => I say that because it has a manual that hardly even touches upon its capabilities. There is so much more that this scanner can do than what the manual tells. Why Yaesu did such a poor job with the maual, I will never know but they are reprinting a new manual now as too many people are complaining. Having said the above,, I must say that it can take a pilots license to fly it. Even though it is a beauty, it can drive you nuts with its long drawn out menu system. Its strength can also be its weakness.

Even though I absolutely rank the VR-5000 as the "best" I have ever owned,, and that's quite a few scanners, I cannot wait to get ahold of the 780-XLT. Everything I have read and seen on this baby is nothng but good, almost total satisfaction from their owners.

To be honest - I think the answer to all of your questions is => Yes...

Go get one - NOW!!!

> technological wonders would be private and inexpensive. We should know
that
> neither story is true. People loved these things because they were a
status
> symbol, nothing more, nothing less.

I guess you're right, mobile phones are strictly a status symbol. The
convienence, safety, and utility of owning a mobile phone is obviously
completely lost on you.

> These yuppie-wannabes became suspicious of this sales pitch when people
like us
> warned them NOT to disclose personal information on these phones, because
they
> could be intercepted. The cell phone people said that was bull shit. No
way

Your stereotype of cell phone users being yuppies weaving in their SUV or ordering pizza obviously comes from personal experience. Tell us, are you a cell phone using SUV driving pizza eating yuppie, or do you just listen to them on your scanner?

> Now digital phones are coming out. This is done to prevent us from intercepting
> calls. For now. We'll catch up.

And you were calling other people paranoid. Ironic.

> Bring on the cell jammers so the soccer Mom,
> yappin' on da phone with Buffy, while driving her SUV weaving on streets can be
> cut off from from this electronic umbilical cord.

You apparently have a lot of free time on your hands, why not invest a little of that time in actually educating yourself on the subject.

> But, if you notice......the FCC has made it illegal to own a jammer. Surprised?

No. Unconcerned would be the term I would use. I can't seem to come up with a use for a cell phone jammer off hand, so that probably won't present a problem for most of us.

> The CTIA just "donated" several million $$$US to the FCC favorite cause ..
> Congress. Japan allows them, most countries in Europe allow them, more
> countries do NOT disallow them. This is because their governments see the

> hospitals and movie houses by those who feel they are more important than
> others around them.

So you're saying that the Japanese and other European governments allow cell phone jammers for the express intent of citizens blocking cell phone calls in an attempt to lessen the "horrible misuse of these phone in public places, churches, restaurants, hospitals and movie houses by those who feel they are more important than others around them"? Are you OK? You sound like a jealous little boy who can't afford a cell phone.

> BTW, I do own a cell phone.

Trying to convince me of that helps you ego, huh?

> I NEVER use it in public places or while driving,

So you own a cell phone but never use it in public places? If you only use it at home why not just use the landline phone?

> so tho those who think Im jealous or cant afford a phone....have no reason to
> think that.

Actually, they would have quite a few reasons to believe that, all of those reasons provided by you.

> It seems to me that the reason that Canada allows cell phyone monitoring
is

>Interesting as in really dumb, real cool, totally off the wall, anything...

If any one thinks that something really dumb is interesting, specially
in reference to the morons on CB radio (not saying that that everyone
on CB is a moron) then some people have big problems, and should seek
help.

>Everyone has a different opinion as to what is interesting... Is was a very
>vague and general comment...

Yet, it was my opinion, and it was not directed at you PowerHouse, it
was directed at the formum in general, after all this is a public
forum, and all replies are directed at the header of the topic, unless
otherwise stated.
>
>I was giving the guy what he wanted, nothing more, nothing less... I never
>asked for your opinion of the subject..

I know you weren't asking, you don't have to, this is a public forum,
and everyone is entitled to their opinion, and it doesn't matter if
you agree with it or not, this goes under the topic of freedom of
speech. If you don't like this idea, go live in some surpressed middle
eastern country.

If you were looking to make such a
>reply, it should have been to HIM, not me, as HE was the one asking about
>such a sight.
Like I have already stated, it was directed to him as it is the topic
header, and I can't see where I put your name on the reply. Unlike
this one.

O_o Well here in Houston we have a similar thing. I hope...There are about 20 or thirty within a 7 mile radius. Well there is one about 300 yds from me. It is a little white box hung on to a street lamp. it has a sensor attatched to the light sensor(to draw power) and the box is about the size of a kids shoebox and it has an antenna (800 mhz whip) upside down sticking from the middle of it. I hear this is owned by METRICOM/Richochet internet, The device transmits about 1-6 watts on lisense free frequencies. (according to various people)

Does anyone know how to Modify the Radio Shack Pro-91 scanner to pick up those freq that give yu error messages. In particular the lower and the higher freq.

Thanks

>(Diamond, Icom)?
>

Most discone designs seem to work best near the low end of the frequencies
they are made to cover.
Therefore, I cut the elements of a RS discone for around 200 mhz and have had
very good results.
The vertical "low band extender" will probably make no difference in the
225-400 range as it's intended to enhance the antenna's abilities at 30-50 mhz.
Let us know what you settle on and how it works for you.

We have those around here as well... After asking some questions (and
I think a small check of my background.. Freaking paranoids around
here!) I got the answer that it is for the nuclear plant that is a few
towns over.. They use the radio for the warning horns.. that way if
comm lines are down the sirens will still sound.. They test it on
every first monday or tuesday (dont remember right now) of every
month...

Keep a close eye on it. I've bought 3 8500s... all have been within
10 Hz at 25 MHz... except for one, which failed with a PLL unable to
lock. I exchanged it under the vendors rules and got a new one, which
was within 10 Hz at 25 MHz. Yours (and mine, for that matter) may
be correctable, but if you look over the service manual for the thing
it is quite scary the number of ways you can break that rig trying to
fix it.

Eric

Let me elaborate on this a bit...

It failed, *eventually*. But for a while it was off about 25 Hz high,
consistently. Fortunately it failed within the return/exchange
period...

Need CTCSS to listen to some particular 2 metres HAMS. Another
thing is that the police in my country is using some kind of scramble
transmission. I can only hear the police handhelds but most of the
time, not the police base station. Usually when the base station is on
the air, it gave some kind of annoying white noise. Hate to listen to
the annoying white noise, I just wanna hear when they go unscrambled.

Coast Station.

That's about where acars is I think!
I live right outside DFW airport, our ACARS is active 24 hours a day.
Not many takeoffs after about 11am but many, many landings, esp intercontinental flights.

Sorry "Davo", but i'll have to disagree with this one. The person who you
are replying to is the person who your name is "under". What I mean is
(using this string as an example - as much as my PC still has stored on it)
Power House replied to Bob's comment, you then replied to Power House's
comment, The Packrat and Power House replied to your comment and you have
now replied to Power House's latest comment.

Hope this helps clear things up.

I'm using TrunkStar780 and, yes, I recommend it. Why? Because it updates the scanner on the fly, it's relatively easy to use and (perhaps best of all) it goes easy on computer resources. I have and have paid for quite a few programs for the 780, but I keep going back to TrunkStar780. It's an individual thing, but this one I can live with and I appreciate that it's frequently updated. You buy once, you get all updates online at no additional cost. Try the demo.

I sound like a shill, but I'm simply a happy user.

Source record: 64586

Hello,
I have a PRO39 not-modified scanner. I try to listen to the Aurora IL police on 866.0375 and I often hear one side of cell phone conversations. Is there anything, besides buying a new scanner, that I can do to prevent this? I assume I am picking up an image of part of a cell phone conversation.

Any help is appreciated!

Thanks
Scott

CTCSS (a.k.a. PL) is often used when stations using the same frequency are not quite far apart enough to avoid some interference, especially in varying band conditions. The CTCSS allows the receiver to "block" the unwanted station, and likewise, prevents intereference from transmissions using a different PL code. There is a situation like this in my area where the local police share the frequency with another police department in another area...if I use CTCSS decoding, the distant, noisy station never opens the squelch. In this case, simply cranking up the squelch isn't enough to block the distant station when the band conditions are better because their signal is relatively strong when compared to the local signal.

FRS radios and ham repeaters commonly use CTCSS as well, if you ever listen to those services. Also, if you have CTCSS decoding, the annoying constant tone is filtered out of the audio...this is especially helpful when monitoring long ham QSOs.

I agree the CTCSS is a must-have feature given the choice. I wish my Yaesu VR-500 had it, too.

Appology accepted Rashbrick.
It does depend on the news reader.

Not everybody uses Outlook express. Not everybody wants a microsoft
product that is great for sucking in virus's.

But thats each and everyones personal choice.

I have two scanners in excellent working and cosmetic condition, both come with operators manual power cords and antenna.

1. Bearcat-300, 50 channel programable scanner also with 11 preprogramed services- police, fire, marine, ham, telepone, government, industrial, transportation and air, then we havemore features, search, timer, delay, lockout, all the features a top of the line scanner has. This scanner covers the following frequencies: 32-50, 118-136,144-174, 421-512.0125 MHz. I had the receiver updated three years ago along with a new digital read out. $70.00

2. Regency MX-7000, 20 channel programable scanner that covers the following frequencies: 25 to 550, 800-1.2 GHz., in your choice of modes- AM, NFM, WFM. This unit covers cellular without any mods being done. It also has - scan, lockout, delay, speed, clock, priority, search your choice of search frequency steps. $85.00

190. Flagstaff, AZ Fire Dept channels

Newsgroup: rec.radio.scanner
Date: 2001-06-05 18:53:49 UTC
From: drrNoSpam@nym.alias.net
Message-ID: <3b1d29d3.5681847@west.usenetserver.com>
Source record: 64506

Does anyone have an up-to-date list of the Flagstaff Fire Dept.
channels and their corresponding frequencies? All of the lists I've
seen are out of date. I think I have all of the frequencies, but I
can't figure out which channel goes with which frequency. Every now
and then they switch to a different channel (for example from ch. 1 to
ch. 3) and I lose the traffic (I can't hear them on any other
frequency.)

Thanks,
Dennis

My DJ-X10T came from the factory with a number of frequencies already programmed in. This data was lost while debugging an interface cable. Possibly could someone post or email this data, either in text or the "Bruce Pope program" format? Much appreciated, and thanks in advance.

Looking for the frequency for Community Boating, Inc. in Boston, or CBI.
I've searched the newsgroup (ala google) and the web and can't find
anything... any suggestions?

Thanks,

-Hank

199. radar detector choice

Newsgroup: rec.radio.scanner
Date: 2001-06-05 20:52:54 UTC
From: rhiggen@clemson.edu
Message-ID: <d945fc25.0106051252.8235ff3@posting.google.com>
Source record: 64518

all right, yeah i know most of you love the valentine one and
everything. but i really don't have the money to buy that or one of
the high priced detectors. i still have to pay off my car so that's
where most of my money is going.
i hate going the speed limit but i usually don't go over 20 mph over
the speed limit so i'm not a huge speeder. but i'd like to get a radar
detector in order to play it safe.

i live in massachusetts but i do most of my driving in south carolina,
georgia, and tennessee (i go to school in south carolina. that info is
just in case anyone is familiar with popular radar/laser usage in
those states).

anyway, from what i've read i'd love to get the bel 980, but i really
can't afford that. bel has gotten quite a few good reviews though so
i'm looking at some of their cheaper models. most notedly the 890,
880, and 870. i've heard good things about all of them.

i don't have the money yet for any of these detectors so i'm not sure
exactly how much i will have to spend when i finally go for it. the
890 sounds pretty good though it's a bit steeper in higher in price
than the other two. i've almost decided on the 880, but that's why i'm
writing this topic in this forum.

i want to know if -
1 - the 880 is good enough. is it really worth it to spend the extra
money to get the 890 or is the 880 enough for my needs?
2 - the 870 is good enough to the point where i could actually buy
that one instead of the 880? i mean, for that price, it's
very tempting.
3 - i should just look at another brand completely?

well, those are my questions. i hope you can help me out. basically
i'm looking for the best radar detector without having to go spend a
whole lot of money that i just don't have. thanks in advance for your
help.

I bought my R-8500 about a year ago and, as with all my HF receivers, I
tested it for frequency readout accuracy...
My method is to put it on any "AM" frequency, in most cases I choose the
15.000 mHz time signal - Why??? because it is right in the middle of the HF
band and it is an absolutely rock steady transmission. Anyway, I then
listen to the time marker beeps/tones in the AM mode. I then switch it to
Lower Sideband then Upper Sideband. The tones and beeps should NOT change
in audible tone to your ear if the receivers PLL is correctly calibrated.
This same test can be done with any AM shortwave broadcast station. You can
soon enough tell just how far out of tune it is by finding that magic spot
where all 3 modes (AM, LSB & USB) will all sound exactly the same. There is
always a bit of drift as you tune up and down the HF band but it should be
minimal and I find it best to use 15 mHz as the marker frequency.

In my Kenwood TS-570 it is between 0 and 10 Hz above the desired frequency in winter and in the hottest months it is Spot On. In my R-8500 it was about 30 Hz over the desired frequency last winter when I bought it. To tune out this "excess" frequency, you press and hold the "SSB/CW" button for 1 second to bring up the BFO readout. From there, you simply tune up/down the amount you want, to tune it to centre frequency. Mine is set to -30 Hz to compensate the +30 above the desired frquency.
In other receivers you can usually find a trimmer or variable resisitor in the PLL circuit which allows a certain amount of tuning - Be Careful here though. My Kenwood R-5000 was like this. It was about 15 to 20 Hz over so one small twist on this variable resisitor brought it right on frequency and I never had any worries again.
It is amazing just how small-an-incriment your ears can hear - I am talking as little a a fragment of even 1 Hz.. Yes, 10ths or even 100ths of one single Hz,,, by having another receiver alongside the one being tuned. Simply leave this other receiver in the AM mode on the same frequency and tune the "out of tune" receiver on LSB/USB until you find the magic spot. Putting your ear up close and in between the two receivers will let you hear the "smallest" difference as you adjust that trimmer or variable resisitor. You will hear and feel the difference somewhere inside the ear as you tune. It is a waist of time to become too fussy though as next time you compare the two receivers, you will notice that there is, again, a small difference, though frequency drift. You will never stop this.

Of course, this is only my way of doing this test and it is also governed by temperature and the amount of time that the receiver has been turned on. It's better to wait for about half an hour or so to let it come to operating temperature. The difference between summer and winter is also noticeable by about 10 Hz in a good receiver.

100 Hz is way too much for my liking BUT it can still be tuned out by holding the SSB/CW button down for 1 second then tuning the available BFO.

That's a very broad question! Of course it depends on frequency coverage,
and desired features.

Of their current production, my favorites, both manufactured by GRE, for
Radio Shack; PRO-92[b] hand-held, and the PRO-2067 mobile/base.

Valentine One or Escort P8500 for portable units. K40 UN3000SWL or Escort SR1 for installed units. I have been the buyer for a chain of retail mobile electronics stores for 10 years and I have seen (and been given free units by the manufacturer's reps) every detector on the market - these are the best. Valentine One is only available direct but it's a nice unit. The Escort P8500 is getting great reviews right now. Bel falses in the city too much for my use and their customer service is terrible. Whistler, Uniden, etc...mostly just buy other manufacturer's low line stuff and repackage it.

209. WTB: TV-R7100 ICOM TV Receive Adapter

Newsgroup: rec.radio.scanner
Date: 2001-06-05 23:53:44 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <cieT6.34091$DG1.5828636@news1.rdc1.mi.home.com>
Source record: 64527

WANTED:

:
The ICOM TV-R7100 TV receive adapter quickly plugs into your R-8500 (or older R-7100). With the addition of a composite video monitor (or regular TV with audio and video input jacks), you can now enjoy video reception from your R-8500. This would include broadcast TV stations as well as any other TV signals that may be in your reception area including amateur fast-scan TV, video links, security and sports feeds, etc. There is also a true stereo headphone jack to receive FM stereo radio stations.

Please state condition, and asking price.

Thanks,

Bill Crocker

well i trust your judgement since it seems you have good experience.
and i've read great things about all of the units you mentioned, as
well. but there is no way that i can afford any of those since they
are much too expensive for me. that's why i'm looking for a cheaper
model (but still a good one). seems it's always so tough to find good
products cheap doesn't it? ahh well.

A cell phone for a penny? How can you pass that up? Lemme see, either you like their abuse or you don't explore other shopping alternatives:) But seriously folks, I was in RS the other day and a HOT looking,drop dead gorgeous female was buying batteries(get your minds out of the gutter, it probably was for her, ahem, 'radio') anyway during her purchase, the rat shack guy had the gall to ask her for her name and address, like they always do, as myself and one other guy was next in line within earshot of all this. Needless to say she wisely said she would rather not, as the question obviously put her ill at ease. Anyway the pro-92 is on sale all this month. 'Sounds like the handheld to get.

Here is an Amateur Radio website for hurricanes: http://www.hwn.org/
This is the Hurricane Watch Net website. They list operating frequencies of 14.325 MHz or 3.950 MHz for net operations (they aren't active right now), or, when the net is activated, you can listen to it using RealAudio. They say they activate for Atlantic and Eastern Pacific hurricanes, not sure what this means for Gulf of Mexico hurricanes.

No, it won't work.

I like your FM modulation, it's a bit like the TSB Bank, i.e. Frequency Modulation Modulation and the Trustee Savings Bank Bank.

Also AC current is another good one.

I just recently went witht he Radio Shack pro 2025 because of its inexpensive pricing, and found it to be very simple to learn and use trunking. I already have the 2026 and could never figure it out, the manual is much easier on it. I was trunk tracking that ssame day.

Unfortunaltey you cannot do trunk and regular service on it at the same time

Richard,

I was trying to monitor trunked systems on a PRO-51 for the last few years. I just recently upgraded to the Uniden BC245XLT with Trunk Tracker II, which you can get for around $200. It is a great scanner that can monitor trunked systems as well as conventional frequencies at the same time. You can purchase it from Grove (www.grove-ent.com) or other scanner dealers.

Read Rich Wells' review on the BC245XLT and decide if it's for you (http://www.strongsignals.net/htm/rev245.htm). It works great for me and I love it. The unit comes with a computer cord for easy programming and radio control.

Good luck.

-Brian

As you don't know enough, to the extent that you
placed the query, the answer is, "No!"

If you had known a little bit more,
(1) You wouldn't have asked the question
(2) You'd know enough to undertake the necessary mods!

Howdy group, would anyone have freq's for Mexico(well along the US border) I have been to Edinburg, Texas and heard spanish comms on 162.525! and on 462.975. Other than that they have Motorola Maxtrac in some shops, (yes i have seen them) and the cops use Motorola radios and so does everyone in mexico...LOL the motorola site list 403-480 and well it's a pain to keep skipping over annoying call. So would any one have definite freq's and associated users?

More secure than conventional 49 and 900 Mhz Cordless but not 100% safe from
Monitoring.

Nothing is readily available to the Average Bear to Scan these save for high
end gear and such.

A good into to SS Technology can be had via:
http://sss-mag.com/ss.html

Have a look and follow links there.

What price range?

What Services do you intend to Monitor?

Handheld, Desktop or Mobile?

If you reside in the USA, the Phone thing is out of the picture, under the ECPA
and State laws it is illegal to Monitor:
Encrypted, Cellular and Cordless Signals.

Ditto....

I agree with Bill... I had 3 Bells and bought a high end Uniden with the LED Indicator (ie: Ka, K,X, Laser printout on the screen) and have fell in love with it. However, one concern I have. You say it is to be used with Laser guns and that they love them in S. Carolina. By the time your detector chirps at a Laser gun, your had, bottom line. And they are not hitting the guy ahead of you or to the side of you, because of the very narrow beam of the gun, it only goes off when they have you and by then it's way to late.

Cheers!

Why is that so awful? Just by using a cellphone you've already broadcast your
call.
Also, just because the company you buy phone service from claims your comms
are "private", don't believe 'em. You, of all people, should know better.

You're talking about only the registered guns. In NY, no registration is
required for rifles or shotguns.
I think one of the original reasons for handgun registration here, was to
prevent people with criminal backgrounds from obtaining handguns.

Hi PB Scanner,

As you can see, I'm pretty new at this. I want a scanner that can
pick up frequencies of police, fire, etc. Basically the same thing
most of you guys can get. For the price range, I can spend about
50-100 bucks, is that too low of a price range? I'd like a handheld
scanner.

Thanks guys.

In a word John. No. FM (Frequency Modulation) has little to do with AM
(Amplitude Modulation). To each it's own.

>I cant find a
>suitable AM transmitter and already have an FM one.

Then you'll have to find a suitable FM receiver.

> Will this work and if so
>will there be any implications to its operation

No implications coz the two items simply won't communicate properly,
although they may interfere with one another and any OTHER receiver on
the same "channel" in the area.

This is the same model that was on clearance just a few months ago. Last price
I heard was $57, brand new in the box.

And Washington, DC.

I'm sure it's just a coincidence that violent crime involving handguns is these
three places is among the highest in the country.

That is *exactly* what I do!

For the higher frequencies it helps to have an HP signal
generator handy... but I trust it less than WWV because it

hasn't been calibrated for a while (although the last time
it was done by NIST in Boulder!)

The 8500 tests very well this way, as does the old FRG-100...

You are right about the ambient conditions being an issue, but the
TXCO in the 8500 helps there a bit... if you are really intent on
getting it right, get a crystal oven option, and if you are truly
anal, hotwire a rubidium standard to it!

(Probably can be done, but I just moved and I cannot find my
shop manual and other ICOM docs. Which is driving me nuts, because
I promised to make a copy of one of the ICOM freebies for someone
halfway 'round the world and haven't been able to do so yet...)

Pro 43 scanner works and looks absolutely perfect. Comes with box and manual. Very clean. Price is $160 shipped with Paypal,money order or checks (clear) accepted. Please email me at bruceinomaha@yahoo.com . I have a perfect 65 feedback on Ebay. I work nights but will email back as sooon as I can.

270. HELP: Problems with using UK scanner in the USA?

Newsgroup: rec.radio.scanner
Date: 2001-06-06 21:29:33 UTC
From: hijax <hijax@prodigy.net>
Message-ID: <9fm7br$9l5i$1@newssvr05-en0.news.prodigy.com>
Source record: 64487
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Aside from the cellular channels I will specifically avoid listening to due to the legal issues, what other problems might I have listening with a UK version of the Icom IC-R2 in the USA? I noticed in the Strong Signals review:

"Since my model was intended for use within Germany, the AM broadcast band is set to use 9 kHz spacing; which is semi-useless here in the US where we use 10 kHz channel spacing. I'm sure that other European units will exhibit the same phenomenon so be sure to consider this when purchasing. Keep in mind that, as mentioned above, while within the AM broadcast band, the step size can not be altered."

I will be purchasing the computer interface and BuTel ACR2 software to do most of my programming. And it appears I can assign a per/channel step designation with the program. So will the software help me to overcome these issues?

Anything else I should be aware of?

Thanks,

-hijax

I have an old Pro2004. IT is a great scanner. Been through Hell and back again. Back when I traveld it saw many a mile. And never, ever gave a moments trouble. I did modify the EL dimmer switch so that bright is off, and dim is really dim. Done the 400 cahnnel mod, and yea, I restored cell coverage.
I have added a 10.7MHz and 455KHz IF out so I can use a SW as a Q5er. Great for listening to SSB/CW on VHF and UHF freqs.
It is a great receiver.

Spend the money and get the Uniden Bearcat BC780XLT. You can conventional scan and trunk scan at the same time. Also, conventional scan and trunk search (for talk groups) at the same time. I have an EDACS, three Motorola systems, Air Band, and conventional channels all going at the same time, if I choose.
As it has been said, 'This radio is not for the VCR challenged'. Sort of like comparing a computer to a typewriter.......

I recently saw an antenna that someone built to receive aircraft communications. It was made of copper tubing and was mounted on top of a peice of PVC. The antenna itself wasn't really very big but the PVC made it stand 10 or 12 feet tall off the ground.

Does anyone know how I might build one of these? I'm not a whiz with this type of thing but it didn't look too dificult to build.

Thanks!!

No 'fraid not

>and if so
>> will there be any implications to its operation

Yup - it won't work
>>
To be a little more elucidatory - AM stands for amplitude modulation.
The frequency of the radio carrier signal remains constant but the
amplitude (size) changes. FM stands for frequency modulation. The
amplitude of the carrier remains constant but the frequency varies.

The latter system is more reliable and noise resistant but AM was easier
to implement and pre-dates FM. The circuits needed to generate and
receive the two systems are very different and incompatible.

You're all wrong!

Yes; it will probably work, although I doubt it will be as effective
as an FM receiver would be.

By slightly offsetting the receiver, you may well find that the AM
receiver can resolve the FM transmitter's modulation by means of slope
detection. It rather depends on the receiver having an IF filter which
corresponds to the modulation index of the transmitter.

Slope detection is a perfectly reasonable way of demodulating FM
providing the modulation index of the tx is 1 or less.

Thats a low budget but you can check Radio Shack for Closeouts and also eBay,
also rec.radio.swap

Average price is around $100+
for good coverage, modern scanners.

Someone paranoid? LOL

It is illegal to monitor phone calls (IE, wire-tapping in any form). I'm not sure if this applies to a persons own family, but I would assume so... In any case, it would still be illegal to do as you would also be listing to the party on the other end, as well, and that is illegal without the other persons consent to do so... Especially if taping is involved...

If you really want to monitor the calls anyway, go out and buy one of those cheapy "25-Channel" cordless phones for her to use while she talks... These can be easily monitored by ANY scanner out there on the market...

Use this info at your own digression as what you are requesting is illegal... But then again, it's only illegal if you get caught... Be smart, be safe.... Don't do it, or hide real well, while doing it... lol

What I REALLY like about your post Chris, is the use of words like
"probably" , "doubt", "may" "rather depends" etc in order to get your
point across.

Now can you state categorically that an FM transmitter WILL function
properly and effectively with NO problems when used in conjunction with
an AM receiver?

Beav (already knowing the answer)

You can E-Mail me at the usual place (Beavis at nachos dot demon dot co dot uk)

Or you can visit my website (Which has undergone recent surgery) Same address as before..

298. 245xlt Users - Help PLEASE!!!

Newsgroup: rec.radio.scanner
Date: 2001-06-07 22:55:31 UTC
From: - <psleprob@hotmail.com>
Message-ID: <3B200651.D46B3CE@hotmail.com>
Source record: 64415
Cross-posted to: rec.radio.scanner,alt.radio.scanner

We need your help to increase the usefulness of the "245xlt Resource Page" website! PLEASE send us your 245xlt scanner's data for your area so that we can make it available (for free) to anyone who is going to visit your area. THIS IS AN ALL-VOLUNTEER AND NON-PROFIT EFFORT. We are building a database of downloadable/uploadable scanning files for locations around the world.

THE DATABASE IS OPEN FOR JUST ABOUT EVERY LOCATION (INCLUDING INTERNATIONAL ONES!!) THAT SOMEONE HAS TAKEN TIME TO PROGRAM INTO THEIR SCANNER - ESPECIALLY VACATION DESTINATIONS!!

Links at this site connect you with FREE software which has been graciously made available by some talented software programmers. With this free software, you can totally (and accurately) reprogram your scanner in about a minute (yes, about a minute) when you plan to visit another city or special event (like an auto race). Equally as important, you can reprogram your scanner back to its current/"home" set of frequencies just quickly when you return home!!!

It will only take a small amount of your time to prepare your files to send to us. Please take the time to "give back" to your hobby.

HERE ARE SOME OF OUR HIGH PRIORITY NEEDS:

New York City
Houston
Boston
Los Angeles
Chicago (hey CARMA members -we know you are out there!)
New Orleans
Miami
Kansas City
St. Louis
Detroit
Toronto
Montreal
Vancouver

INSTRUCTIONS FOR SENDING ME YOUR DATA AND DOCUMENTATION FILES ARE FOUND AT THE BOTTOM OF ALMOST EVERY PAGE ON THE WEBSITE!

Thanks for your help and I hope you find the site useful.

Doug

A J pole antenna is made out of copper tubing, it could be cut for aircraft frequencies.
I have a program, I got off the net that tell you what lenghts are needed. It uses 1/2 & 3/4 copper tubing that you solder, very easy and not at all expensive. These antennas are used by hams, they might make good vertical receiving antennas.

You won't be able to scan the spread spectrum signals themselves - not
without a few thousand dollars worth of specialized equipment.

But you often can scan the intermediate frequencies used inside the
phones themselves, if you are close enough.

If you wanted to record a conversation you'll need...

- Radio Shack #43-235A or similar
- A voice activated cassette recorder
- A power adapter is handy for the recorder.

Plug in the recorder into a phone jack, plug the 1/4 plug in to mic jack of the recorder. Set the recorder to voice activated recording. If it isn't VOX (voice activated) the recorder will just tape nothing.

When the phone rings or when someone uses the phone it will send an audio feed to the cassette recorder. When the conversation is finished it will stop. Pretty simple.

If you have a cordless phone and scanner you could connect you audio out from your scanner to a tape recorder. Check out http://scannercentre.8m.com/cgi-bin/framed/2419/cord.html for the required frequencies. Be careful because you will pick up your neighbors!

Es

P.S. If my parents invaded my privacy the way you are going to with you daughter I wouldn't have much of a healthy relationship with them. You'd be better off TALKING to you kids rather than treating them like prisoners. But who am I to tell you how to raise your kids!

This is a common problem with hand held scanners. Check for broken
center pin. If it's not the the problem then you will have to open up
the BC 245 XLT and see if you can resoulder the
BNC center connector back together with the PC board. I have sent radios
back to the manufacturer to have this done ALSO to completely replace
the BNC antenna
jack because the franenstine neck pins on the BNC are worn down
so the antenna is loose, and I've tried it myself Good luck. Jim

What do you know?

If it was the other way round, ie) an AM transmitter and FM receiver,
I would not even suggest trying. But slope detection is a perfectly
valid way of demodulating FM under certain conditions.

We don't even know the application - if it is for model aircraft
control - forget it - but if it is for, say, garage door opening then
I would sure as hell give it a go before forking out on a new
receiver. Does your mind only operate in black and white - the answer
to this question is positively "grey". Perhaps you are an academic???
;-)

73 and thnx for your very helpful contribution.

Chris

Normal commercial standard is +/- 20Hz. My new FT817 was about +80Hz. I retuned the tcxo by ear whilst listening to a station playing music. Music really sounds bad off frequency and I used the AFN 13MHz signal from Guam as a source. Now everything sounds perfect.

Funny that I should do this despite owning a whole avionics workshop calibrated to NIST!
Brad.

I was wondering if you could recieve and decode the data packets that are transmitted to the police in the field over the airwaves.

It is probably like recieveing weather satelites...correct?

Anyone know anything about this?

Thanks,

Bow

316. FS: BNC F to SMA M Antenna Adapters $5.25

Newsgroup: rec.radio.scanner
Date: 2001-06-08 13:41:56 UTC

I happened upon a source for quality BNC F to SMA M antenna adapters, commonly used with ICOM receivers plus others.

They are $5.25 cost + shipping if I order in quantities. If you want one, email me at hijax@usa.net. I will be posting a simple auction on Ebay in the next few days and need to know how many to list.

Regards,

-hijax

That's a question if ever there was. What do I know about what? Radios?
Models? Wimmin? The list is positively ENDLESS.
>
>If it was the other way round, ie) an AM transmitter and FM receiver,
>I would not even suggest trying. But slope detection is a perfectly
>valid way of demodulating FM under certain conditions.

Conditions suitable for flying RC models under? Remember he did post to
a few RC groups.

And would you think our intrepid 27 meg AM-er knows what slope detection
is, know if his Tx does, know if his Rx does?
>
>We don't even know the application - if it is for model aircraft
>control - forget it -

Which is basically what everyone but you has already said, but you're
going to show us all just how wrong we are aren't you? And I suggest we
DO know what application he's looking at. RC control of a model. I'd
even go so far as to say it's for a radio controlled car, but I'm like
that. I read the headers.

> but if it is for, say, garage door opening then
>I would sure as hell give it a go before forking out on a new
>receiver.

If it was a garage door opener he wanted, I wonder why he didn't cross
post to alt.garage.door.openers.

> Does your mind only operate in black and white -

When it comes to models, you bet your arse it does.

>the answer
>to this question is positively "grey".

Well if you're happy then we're ALL happy, but I certainly don't want a model being used around ME "controlled" by a radio that sits positively in the grey area.

>Perhaps you are an academic???
> ;-)

Oh I'm that, and more.

I never said the law worked, or was good or effective. I agree the law doesn't do as it was intended. My point was merely the original intent, and I would like to think that, to some degree, it initially did what it was supposed to.

Not necessarily.

I'm
>not sure if this applies to a persons own family, but I would assume so..

If you're recording your own phone it's legal. If it wasn't how could
retailers sell the recording devices?
.
>In any case, it would still be illegal to do as you would also be listing to
>the party on the other end, as well, and that is illegal without the other
>persons consent to do so...

Negative. If you are a party to the call and you consent, you need neither
inform the other party nor obtain their permission. Taping calls that you're
not party to gets into another legal realm altogether.

<<< Especially if taping is involved...

Taping the call makes no difference. Tapping is tapping whether you record or
just listen.

As of today, 08 June 2001:

Expage Support wrote me to say they removed them because it appeared I was
using SPAM to promote these pages. On this matter I do not agree.

Although they were entirely noncommercial and only served to help others with
what most regular users would agree were the most often requested Links for:
Frequencies, Sites, Reviews, Manuals and so forth,
it appears that someone objected to my occasional Posting of Links to these
Pages; as I felt was permissible as is the semimonthly Posting of similar
content by other well meaning Posters.

I went into a bit more length on this subject on alt.radio.scanner, thus I will
save Bandwidth and reference that posting under the same Topic.

My true regrets for offending anyone.

Best regards,

PB Scanner

Easily, because it's NOT illegal if you have the consent of ALL parties
involved it the conversation....

> >In any case, it would still be illegal to do as you would also be listing
to
> >the party on the other end, as well, and that is illegal without the
other
> >persons consent to do so...
>
> Negative. If you are a party to the call and you consent, you need
neither
> inform the other party nor obtain their permission. Taping calls that
you're
> not party to gets into another legal realm altogether.
>
Negative on your part... ALL parties have to consent to the recording...
If they don't then it is illegal.. Quote from the FCC website:

The FCC protects the privacy of telephone conversations by requiring
notification before a recording device is used to record interstate or
foreign telephone conversations. These types of conversations may not be
recorded unless the use of a recording device is:

1) preceded by verbal or written consent of all parties to the telephone
conversation; or

2) preceded by verbal notification which is recorded at the beginning, and
as part of the call, by the recording party; or

3) accompanied by an automatic tone warning device, sometimes called a beep
tone, which automatically produces a distinct signal that is repeated at
regular intervals during the course of the telephone conversation when the
recording device is in use.

So, where does it say that only one person has to consent, and the other
does not need to know about it?

> <<< Especially if taping is involved...
>
> Taping the call makes no difference. Tapping is tapping whether you
record or
> just listen.

Already proved my point above... Your wrong.. period!

Here is the link if you must see it... Check it out for yourself...

> Negative. If you are a party to the call and you consent, you need neither
> inform the other party nor obtain their permission. Taping calls that you're
> not party to gets into another legal realm altogether.

Not quite simple. It depends on state law. Some states (cf MD - State v. Tripp) require both parties' consent others only one. the federal law, IIRC requires only one, but it can still be a violation of state "privacy" laws if you do so. The distinction between taping a call without the other party's permission and not revealing it is an artificial one, however. One can't be charged if no one knows you did it. All of which is by way of saying that no matter where you are, if you don't reveal to anyone that you did the taping then you aren't going to be an any difficulty. But then if you don't disclose or use the tape, then why do it in the first place? The practical consequence of this two party consent legislation nonsense is that it is impossible in these states to introduce a tape to impeach a perjurer on the stand.

Today News (Toronto,Ontario's Community Newspaper).....

An Ottawa-based Web site is streaming live cellphone
audio onto the Net from a radio that scans cellphone
frequencies in the city.
It seems to be perfectly legal, but it has come as a
shock to cellphone users who hadn't realized how easy it is to eavesdrop on
older cellphones.
"I know all kinds of people who scan cell conversations just for kicks,"
said John Aiken owner of Modern Security. Scanners easily monitor analog
phone calls, but not the newer and more sophisticated
digital mode. However, when a cellphone user leaves
a digital area and the phones silently switches to analog mode the call is
susceptible to scanner monitoring. The cellphone scanner Web site is
registered to a person at a fictitious address. Efforts to
reach the owner were unsuccessful.....The site posts a
disclaimer on privacy issue:
"Under Canadian Law it is not illegal to listen to cellular broadcasts,
it is however illegal to use any of
the information you hear on the radio frequencies for your own personal
gain, or for malicious purposes."

Friday June 8, 2001

Thought this may be of interest to all us Scanner users.

From The Canadian Press......

Thank-You

The legality depends on two things. First, what state do you live in? Some states require the consent of both parties to the call, some only require the consent of one party. Second, does your daughter consent? If not, then you're violating the Federal wire tapping statute, and it doesn't matter in which US state you live. The fact that she's your daughter, she's a minor, that she lives in your house, you pay the phone bill, etc. have no legal significance regarding conviction, but they might help you at the sentencing hearing.

I usually recommend people contact an attorney in their own state when they have a legal question; but in your case I recommend a family counselor.

Realistic Pro-2006 - $300 plus S&H
400 Channel Programmable Scanner
- Fast Mod
- Cell Mod
- Backlight Switch (backlight works perfectly)
- Includes Original Box, Manual and Antenna

This unit was refurbished by Radio Shack in 1995. I bought it 1996 and have used it for maybe 30 hours total. It is in PRISTINE condition. I even have the original Styrofoam inserts for the box!

Money Order or Cashier's check shipped immediately. Personal checks must clear.
Snail mail address for sending payment is my law firm, which has a web site with my name, picture, direct line phone number, and the like, so you don't have to worry about sending your check into the void. Email for details - dionin@btlex.com

What are you using as an antenna? At those frequencies, the signals is very much, line-of site. Also, if you're attempting to use an outside antenna, there is too much loss in most any coax that the typical home installation would have.

Hello driver.. Name is Jason here I used to drive for like 6 months for U.S. xpress. I used a radar detector when I drove and found mostly that all the states really are just using normal radar and not Laser. My dad is also a police officer and laser is really only used in heavy traffic and during the day. If you are like me and you are in v.a. at night going 90 down the hill You need a detector. I don't know what detector to recomend but was going to give you some info on radar. Radar picks up the biggest strongest signal and guess who that would be in the line of traffic. YOU! Laser detectors are usless. I had a detector that was suppose to pick up laser and it did within just 100 feet and I was already caught. There are some websites that will tell you about the detectors and which ones are the best. If I find that site I will send you the info. Watch out for the bears!

Which is an obvious example as to why gun laws
don't work .. Crime in NYC, and
Washington D.C. are still committed with handguns,

But then the Liberals like Schumer are too dumb to realize
that concealed carry for the law-abiding would be the better
solution..

Criminals would rather know that their victims will not
be armed since the victim will also likely to obey the
laws ..

That's right: mono from both earpieces.

I own two scanners: a PRO-64 and a PRO-92. Both are made by GRE for
Radio Shack.

The 64 just feeds one side of a pair of stereo phones. The 92 feeds
both sides. Good deal for the 92, since I didn't have to buy an
adapter for it.

So much for this detail being a universal trait. :-)

Hi all.
I have just uploaded a small utility to automatically set any RS232 capable receiver for reception of weather satellites.

The program will also automatically record the APT audio signal from each satellite pass.

If any of you are willing to provide some feedback of what works as planned and what not, it would be of great help (and your operating system).

You will also need David Taylor's Satelite tracking program (if you haven't got it you're missing a lot) from www.satsignal.net

You need to set up an "ini" file with commands and optionally responses to your receiver. If you want, please send me this file along with your receiver make and model (and your name !!), so I can distribute it with the program.

Download the program (WX Receiver) from www.nhreas.com. Go to "Satelite" page. It's at the very top.

Thank you all in advance and I hope you like it

George Ioannu

Hey all,
Just got mine.Did have to wait two weeks
for it to come in at the local Ham Radio shop.
At first I thought, oh no, brain overload, it certainly
is a sophisticated scanner.I'd never programmed
a trunking type sanner before.But I noticed it could
program itself, using SmartScan Mode.Well off to
local R.S. store for a RS232C cable.Since they didn't
have the (male/female)cable,I got a (female/female) cable
and a (male to male)adapter for one end. I downloaded
SmartSanner.zip from http://www.uniden.com/om_5scan.html
the evening before. I connected the cable, and followed the
instructions in the manual. It all went right the first time,no busy
signals,no errors,no sweat.
I am very impressed with this product.
Now if I can only figure out all of these features on this great
machine,and I will really be a happy camper.
Thanks Uniden.

Easy to set up as a Public Service Trunking Scanner

=>ALL RADIOS GUARANTEED TO BE FULLY OPERATIONAL<=

Motorola ENHANCED STX 821 TYPE l, ll, lli

H35WPA5170DN , Serial Series 678ARGXXXX
GPS 1.0 Firmware
Comes With Factory External Spk/Mic
1999 Date Code Battery
Motorola Factory 1 Hr. Charger
Will program if you send a code plug
Has the A through P Select switch
Small Antenna Included

$335.00ea + 8.00 for Shipping and Handling

Photo can be seen @

http://www2.4dcomm.com/metrotech/stx_821.jpg

Website Comming Soon

Unlike Older STX's which are Type l only, These are the ENHANCED VERSIONS which will do Type l, Type ll, and Type lli. These are a super Brezze to program. Does not require "System Keys", or special Software. Easy to Clone from one radio to another. I have several of these, and they will all talk to each other in the Conventional "talkaround" mode. Makes a NEAT SCANNER for Public Saftey. Only a few left !!. All WELL MAINTAINED BY THE FACTORY SERVICE SHOP.

If you have any questions, please feel free to call me @ 858.268.1788 or Email MSisco9939@aol.com

Terms:

PayPal Now Accepted !!

Acceptable PrePayment in the form of a Postal Money Order,Certified Bank Draft, PayPal, (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time.

Real quiet in the Caymans, local marine stuff etc. Cable TV on the
island
along with US dish TV. USD = .83 Cayman. If you have a ham license you
need
a recip before importing stuff into the caymans. Don't know about
scanners
or other stuff.

Source record: 64297

The PRO-92 A and B use the control channel for trunk scanning original
PRO-92 with Vs. 1.00
software uses the subaudable tone control "hand shake" between radios to
do the trunking,
which is a bit slower and is not as reliable as control channel trunking
on Motorola systems.
The PRO-94 DOSE NOT DO conventional and trunking at the same time! THE
UPGRADED PRO-94A will
do both at the same time The PRO -92s and PRO-94 and PRO94As use regular
AA batteries
where the BC 245 XLT has a propriety battery pack. This battery pack is
the same as the
BC 235 XLT PRO-90 and Uniden Sport Cat SP 200.
The BC 245 XLT and PRO-92 have computer access where the PRO-94 and
PRO-94A do not.
The PRo-92 A and B will also do Tone Squelch, CTCSS/DCS. Check out the
reviews
at <http://www.strongsignals.net> and <http://www.PRO-92.COM>
When shopping for PRO-92A or B or the PRO-94A look for the catalog
number on the
bottom of the scanner. The nomenclature up on top just says PRO-92 or
PRO-94 and the Clerks may not know the difference and check the
manufacturing date look for 0500A or later! Jim

Sell it and buy another radio.

In my experience even the IC-R2 is totally useless compared to all other
radios I have used. When the squelch opens the signal drowns in noise
even if you are within visual range of the transmitter. I returned mine
to the dealer and they found nothing wrong with it. :-I

We've created a new online ACARS club for all those interested in the subject. By joining the group, you can...

* Chat to others with the same interestes (via the Message Board or real time chat)
* Post ACARS/Aviation related events on the group Calendar
* Post your favourite pictures
* Add links to your own web sites

This is not intended to try and replace the excellent ACARS Mailing List. It's been created to give people a more "interactive" on-line experience.

The group is located at http://uk.clubs.yahoo.com/clubs/acarsonline

Cheers,

Mark

PH,
Great link, but you should have read it more carefully. The parts you quote come under the header "Recording Interstate or Foreign Telephone Conversations" which is where Federal rules and regulations preempt state laws. In all likelihood, the original question will pertain to local calls. Under the header "Recording Intrastate Conversations", you will find the following statement: "Questions or complaints about recording intrastate conversations (calls placed within the same state) should be addressed to the state public utility commission for that state. You can contact your local or state consumer office to obtain the telephone number and address for your state public utility commission. This information also may be listed in the government section of your telephone directory." Some states allow the taping of personal calls by one of the parties making the call, other states require both (or all) parties to agree to the taping. So the person making the tape needs to find out the laws in his or her state. However, (and I'm no lawyer), I believe that just about all states would prohibit phonecalls being taped by a third party, even if the calls are being taped by the parent or legal guardian of a minor child.
Having said that, I believe the questioner needs to seek professional counseling. Either he or his daughter have a problem that needs to be handled promptly by a qualified professional.

Thanks Knut .
I Have Had MANY Of The Receivers From Kenwood, Tentec Hallicrafters,
Grundig, Icom, Collins And On & On.
I Rate The Sony As One Of The Best.

As A Portable It Can't Be Beat With Anything I Have Seen.
As A Table Top It's In The Top Performers.

Good DX

399. Re: 1240-1300 Mhz Ham band

Newsgroup: rec.radio.scanner
Date: 2001-06-10 21:43:50 UTC
From: "M. Schneider" <markinokla@juno.com>
Message-ID: <DNRU6.664$I24.3555@newsfeed.slurp.net>
Source record: 64314

Frank,

According to my brand new ARRL Repeater Directory, there is one amateur repeater in this band in the Cleveland area on 1291 MHz, sponsored by N8OND. Any portion of the band MAY be used for FM voice, subject to approval of the coordinating committee if intended for repeater use. The ARRL bandplan, which is a guideline only, shows the following allocations.

1270-1276 Repeater inputs - FM, paired with 1282-1288
1282-1288 Repeater outputs
1294-1295 Narrowband FM simplex, 25 KHz spacing
1294.50 National FM Simplex calling

Notice that the above repeater does not fall within the ARRL-suggested bandplan. in fact, of the seven 1.2 gig. repeaters listed in Ohio, only one meets the bandplan, and it is apparently a simplex repeater on 1285, as no input frequency is listed. the other six are in the 1290-1292.2 range, with inputs in the 1270-1272.2 range.

It's an excellent hand-held communications receiver, but not the best scanner. The scan rate is very slow, compared to most scanners. It also eats batteries fast!

Yes, the police and fire people do. Quite aside from the possibility that you will be getting in the way and hindering the public safety people in the performance of the duties (which could net you a ticket and/or an arrest), there is the very real possibility that you could become another victim do to your presence. You could become involved in an accident while gawking at an accident or fire, or you could be struck by a "stray" round during a confrontation between police and an armed suspect. It is even possible that your presence could trigger a suspect to open fire if he/she is already agitated. To repeat a comment made by a man with a gun recently while he was holding police at bay: "What are those people staring at!! Tell them to get out of here or I'll shoot!!"

In short, stay at home, listen to your scanner, and read about it or watch it on the news.

Seems to me that if you tell you daughter/son/whoever that this phone
is tapped(since I pay the bill,and its in my name), and it contains a
beep tone/message informing the other party of the same.That it would
not matter if your daughter/son/whoever consented or not.
Many phones, are automatically recorded,such as 911,banks,tip
lines.They don't ask for consent.
I thought in many states,there is a thing called "Expectation of
Privacy".Where you can record oneone without their knowledge
if it is in a public place,where they should not expect privacy
anyway.But that you can not record them in say the bedroom with the
door shut,since they except what they say is in private.
BigBrother has been tapping restaurant tables for years listening to

WiseGuys and such.
Its a Brave New World.I never dreamed I'd be a movie star,but everywhere I look I see cameras,in stores,on the highways,on the downtown street corners.There's even a sign near the public library in the downtown area that reads "Video Recorded Zone". I don't expect privacy anywhere anymore.
I second the other guy,don't record your daughter,talk to her,or get a fanily counselor. Life's a game where if you make a bad decision and you follow it through,you don't get to undo it.
Dean

Unfortunately, I don't believe it's this simple. The liberals know exactly what they're doing. Their ultimate goal is not gun control, but gun confiscation. The national firearms registration program, which they hope to enact into law, will easily allow them to accomplish this goal.

Careful. Most 860s cannot be modified for full 800Mhz coverage. Only a few of the very early models can do this.

Instead, try to find an 855XLT. This was the predecessor to the 860. All 855s can be easily modified. Channel expansion, from 50 > 100 channels, is also an easy modification.

In today's junk society, this could work to your financial advantage. Find a
lawyer and sue, sue, sue the city for negligence. Some brain-dead jury will
feel sorry for you and award you a few million for your trouble. After all,
it's only tax dollars.

Now they do, and the news media is all over this story.

Next step: restrictive legislation, similar to what we have in the U.S. If you want a cellular-capable scanner in The Great White North, you'd better buy it soon.

I love the Sony 2010. I don't own one any longer though. Reason is, the 2010 does not have fine tuning for SSB. REAL BUMMER!!!!! The 2001 had fine tuning, but the 2010 does not. The 7600G has fine tuning. Does this make any sense? What a great radio the 2010 could have been.
DeWayne

I've compared my IC-R10 to my dad's VR-500 and they're very comprable.
Just a different interface. I don't think you'd find any benefit to
having both.

Hi folks,
Has anybody out there done any modifications to the I.F.
filter section of the receiver. The AM bandwidth has pretty poor skirt
selectivity. I was thinking of throwing either a mechanical filter or a
ceramic filter with more elements, such as a Murata CFS or CFJ series
filter.

Pete Gianakopoulos
Chicago, Il.

The 2010 is a great unit. It has nice audio and a good sync detector. It's a good gateway between simple portable and serious comms receiver.

It's true that it can only tune in 100 Hz steps in SSB (50 or 25 Hz would have been nicer), so if you are listening to RTTY or code signals, it's not exactly great, but it still gets the vast majority of ham broadcasts nicely. Most SSB broadcasts sound fine and AM broadcasts are bellissimo !!

I've heard of a mod for this, and another to improve the wide bandwidth filter. I don't know which company/individual performs this mod. Kiwa offer a filter mod. My unit is unmodded and I love it nevertheless !!

At least 3 from where I sit.

The guy who sold it to them.

The guy who bought it from him.

The person who will buy it from the store.

422. BC350A prgmg info pls

Newsgroup: rec.radio.scanner
Date: 2001-06-11 04:55:25 UTC
From: billgnospam@cwnet.com
Message-ID: <9g1ivt$2gp$1@news.netmar.com>
Source record: 64337

I just picked up a nice BC350A at a flea market. $5 bucks, guaranteed not to work. Found a shorted reverse current diode, replaced it, and she came to life! However, I can't figure out how to program the thing! It'll do all the preset functions, Police, Fire/emerg, etc. But cant figure out how to program my selected frequencies into memory. I'm guessing that the "private" button has something to do with it. Also, it indicates "memo loss" on the LCD,
and nothing I do makes that go away. Guess I need a manual, but I bet somebody out there can tell me what to do in a short email. If you're the one, email me direct, remove "nospam" from addr.

Thanks, Bill

Thanks for the correction... I guess I didn't read far enough... I made the assumption that it would apply to all states, as federal law supercedes state law... I suppose had I read a little further I would have noticed the section about individual states.. I would also have to agree with your comment about the third party recording... I can't see that being legal in any state..

PH

I have been trying to update the scanner news section of my site more often.
http://www.webdeals.net/news.htm
The site has been moved to a new server and seems much faster. Same address,
different server.
The site got so much traffic that my old hosting company decided that they
wanted to raise my fees
250% so I moved the site and transferred the domain name to a new hosting
company.
I will be adding about 30 more scanner pictures that have been emailed to
me. I have been
busy with the move and haven't updated the scanner picture page in about 30
days. Thanks for all of
you who have sent pictures in. The older ones are the best!

I wouldn't send it in the mail at all - I'd use PayPal (www.paypal.com).

It is instantaneous, reliable (8 million people use it), traceable,
international, and more.

I use it all the time. Check out the review at:

Hi
I'm thinking of getting the Yupi 7100.
what is this scanner like on HF on its stock antenna (telescopic whip).
I know its quite good on VHF/UHF using this whip, but have not had the
opportunity to try one on HF, some have told me it is not very good at all.
I expect it is excellent on a home base antenna, but its the telescopic whip
I am interested in
thanks

Hi

Does anyone have the latest update for ScanMaster 895? I have the prog
but they don't have the updates on their FTP site anymore, and I'd like
to re-install to get the trunking feature. If someone could e-mail me
the update, I'd appreciate it.

ve3tyg@home.com

Thanks,
Jason VE3TYG

The BC350a is the same scanner as the Radio Shack Pro-2056. The following
link will take you to the user manual.

http://support.tandy.com/support_electronics/39986.htm

memo loss just means it got unplugged long enough to lose the memories someone had programmed into it, no problem, it will disappear when you reprogram it. It is very easy to use, most stuff is already in there in the preprogrammed bands for police, air, marine, you just hit the button and get it all, lockout the ones you don't want with the L\O lockout button!

That scanner is worth about $65 in good shape, it is very sensitive and will pickup lots of stuff in the low numbers better than the scanners costing 3 times as much!

The manual is one of the FEW, very few, that uniden actually gives you for free at their website! in pdf format, if you know what that is, probably do if you are in here!

http://www.uniden.com/om_5scan_2bm.html

I have For Sale a NEW Radio Shack PRO-2067 Multi-Trunking scanner, AC Adapter, Programming Cable AND Programming Software. I was given this as a gift by my wife 2 months ago, and it has been sitting on my desk ever since. Our County has a digital System, so I can't scan them with this radio, and I am past the 30 day return from Radio Shack :-(I am asking $275 INCLUDING Priority shipping. Thanks for looking!

LARRY :-)

Why?

These are GREAT radios for $200.

What else would you suggest in that price range that's better?

Barry

Does anyone know how to get an R2 apart so I can replace a broken display? The local shop wants 15 for the part, 150 for the labour. I think I could replace it myself, if only I could figure out how to get the thing apart. I've got the back off, taken out all visible screws, unscrewed the washers holding on the dial and the antenna connector, but the PCB's still won't budge. I don't want to force anything. Any suggestions?

Can't say that I agree with your evaluations.

I can/have compare(d) the PRO-92B with several older Bearcat and RS scanners. There is no comparison!! The PRO-92 outperforms them all in the 30MHz to 500MHz frequency ranges. That includes sensitivity and features (PL and DPL, etc.). When you add in the 800MHz and trunking, which I have found to be problem free, there is, as I said, no comparison.

Now, if you want to compare the PRO-92 with the Bearcat 780XL, that may be a different story.

Here in NY a teacher was accused of having sex with a minor (15 or 16 if I recall correctly). The kids' parents thought something was up and taped the calls. The judge threw the tapes out at the trial saying they were obtained illegally...that the parent did not have the legal right to tape their son's conversations.

Bruce,

The nice thing about using a postal money order and mailing via USPS is, if the person receiving the money order cashes it and doesn't deliver the goods, it becomes mail fraud (a felony) and a U.S. Postal Inspector, who has roughly the same authority as a U.S. Marshall, will be knocking on the seller's door. I had occasion to deal with a Postal Inspector some years back when somebody I was acquainted with at the time mailed a bomb to his family (no, it didn't go off). Let me tell you, I was glad I was on the good guy's side, I wouldn't want to tangle with these guys.

I compared it to my grundig yb400 one night and the they were very
close, with maby a slight edge to the yupi. It was only a short test
on a few frequencies.

I am well aware of that. My wife works for Paypal! However, some people
actually want payment in the mail. Then my question goes back to what is
the most secure method of payment in the mail other than cod? It appears
postal m/o.

.I have had a 7100 for 5 years.

I now have a second one to go with my 9000M3.5.

Yes well , you need the discone or a long wire aerial strung to
a tree in the garden. Treat the telescopic as a walking aerial.

The telescopic antenna is ok down to 30 mhz cellphones, but
nothing lower than this.

Even in the car you should have a mobile scanner aerial
made for this purpose.It is so much better than laying it
on the top of the dashboard.

The discone does pick up 4,8.11, 13 and 17 meg reception
if the squelch is reduced to just above speaker noise level.
The bar graph can be at 1/3 full scale.

But on a long wire, the bar graph value goes up to 2/3 scale on
anything below 30 mhz. but note 75 mhz is attenuated by the
long wire. So the crossover is somewhere in between 30-75 mhz.

Your local electronics store will have a BNC to RCA plug cord.

Wire the long wire to the RCA inline socket.

The old amateur adage of right aerial for the job, does still need
to be heeded.

But after all this, the yupiteru 7100 is a powerful listener on all
bands with the telescopic, discone and long wire as appropriate.

Here in the states 141.100 is most likely a military frequency.. perhaps the original person who posted the message lives close to a military base and he got their police frequency (DoD Police, MP's, Air Force or Navy Security Forces, etc...).

Like so many Ramsey kits, this one isn't worth building unless you're
seeking an education on why some circuits don't work.

The problem is that he uses a 40 MHz crystal and one Class C amplifier
to generate a tenth harmonic. Then, after the mess has been made, he
attempts to filter this tenth harmonic and stuff it in an MAR1 hoping
to drive it in to nonlinearity.

Not only is this circuit doomed to work poorly (if at all), but it
will also be unstable. There is practically no decoupling at the 12
volt input (if you think a 10 uH inductor will look like that across
the entire VHF and UHF spectrum, think again).

To do this right, one should use several multiplier stages to get the
400 MHz input and then drive something like a doubly balanced mixer.

You'll need the MAR-1 in the front end to keep some semblance of a
reasonable noise figure.

Bottom line: You will be very disappointed if you duplicate this kit.
Don't waste your time.

Did anyone catch the recent US Supreme Court ruling that authorities conducted an unreasonable search when they cruised a neighborhood with an IR camera looking for heat from lots of grow-lamps.

Authorities went for a search warrant based on this casual IR camera search, and with this information they caught a guy growing marijuana in his basement. The defendant argued unreasonable search all the way to the Supreme Court --and here's what sucks: HE WON!

Stop me if I misinterpret what the court has done, but if we take this any further, we'll have to ban the use of binoculars by police or individuals on the assumption that people associate distance with privacy. And if we take this yet another step further, it bans the use of the electromagnetic spectrum for anything but licensed reception.

I'm concerned. How about you?

Actually, according to an analysis piece I read on the TIME
web site (admittedly not the be-all/end-all of legal info)
this has already been ruled upon. If the window is open and the
plant is visible with the naked eye, they can go in without a
warrant but with binoculars they cannot.

> I'm concerned. How about you?

Sorry, Jake, I totally disagree with you here. At the risk of
starting (another) flame war -- I've already used my quota of
one per year...

I respect you and have had some private email discussions with
you on various political issues related to scanning and scannists,
but in this case I believe you are wrong and the Supreme Court
got it right.

The Fourth Amendment states: "The right of the people to be secure
in their persons, houses, papers, and effects, against unreasonable
searches and seizures, shall not be violated. No warrants shall
issue, but upon probable cause... and particularly describing the
place to be searched and the persons or things to be seized." (It
used to be said, colloquilly, that a man's home was his castle.)

The problem is they did the "search" -- the IR scan -- without
a warrant.

The Fourth is one of my sore spots right now because of the
seizure laws and their abuses in the "drug war." Now I'm not

happy that the guy "got away with it," but if that's what it takes to get the police to follow the rules, so be it.

This case is pretty minor compared to Miranda, ("You have the right to remain silent...") which was a rape case overturned because he didn't know he had a right to an attorney before he was interrogated. He, too, was clearly guilty, but the police broke the rules.

If it makes you feel any better, in most cases getting the warrant is a formality (another sore spot for me!) and this particular individual is gonna be watched like a hawk and will get nailed if he touches pot again.

According to the TIME article, the Court ruling overturned the
conviction. He can't be tried for it again, because that's "Double
Jeopardy." He got away with it. But again, if that's what it
takes to get the police to follow the rules, so be it.

This really isn't scanner related, but I'll throw in my $.02 worth. Using a device such as that, you can "see" into people's homes.. using binoculars will only allow you to see in areas where people would not normally have a reasonable expectation of privacy (unless they keep their shades wide open, but that's a whole 'nother can of worms. If you're saying that you think that scanners will be outlawed next because people will expect to have privacy on the air, that has been decided long ago - there's no expectation of privacy with RF devices such as cell phones, cordless phones or FRS radios...

If that's the case, I am sure the plants were already confiscated (and maybe destroyed) and if the system had any effect (probably didn't), he got scared and he'll stay away from the stuff.. so in the long run, MAYBE even the incorrect methods were effective in eliminating 1 more druggie.. now the cops will have to play by the rules with those things... who knows?

Also remember, just because the supreme court says something, it doesn't always mean that everyone will follow it... Other departments might do something like this and get away with it because the suspect doesn't have the money or the inclination to fight it. He/she might not even know about this ruling..

That, to me, is a *bad* thing, not a *good* thing.

Ever dealt with a corrupt cop or police force? 'taint fun. Pray you never get targeted by a no-knock raid because someone screwed up on the paperwork or just plain didn't follow the rules. A couple of years ago here a guy was shot to death in a no-knock raid on the wrong house. The officer who blew it, who has a history of violence in the department, got off with a warning. His widow was given some paltry sum like $2000. (I don't know that the figure is right.)

(I am *NOT* painting all cops with the same brush -- I'm an ARES volunteer with the local force for communications emergencies and have had civil dealings with officers who were doing their job properly (and writing a ticket for me) but I've had the other kind, too.)

Hey,
If the circuit is one of those that take 900/800 MHz signals and converts them down 400 Mhz into the 500/400 Mhz scanner range, you might what to look for a GRE SUPER CONVERTER 9001.Don't know if they make them anymore,doubtful.But I've heard GRE makes good products.

I disagree completely. They have always clearly upheld what was visible in plain sight, the use of binoculars would most likely be OK. What this ruling does for us, I think, is outlaw the use of a "scanner detector" to see who is "illegally" using a scanner.
This is a GREAT decision, a man's home is his castle, and the Government may NOT use electronic devices to spy on you!

>That, to me, is a *bad* thing, not a *good* thing.
>

You're right, but it works both ways. For example, the Supreme Court recently rulled that you can be arrested on any traffic stop, no matter how minor. This doesn't mean that every police department will start arresting everyone doing a "California stop" at a stop sign. Believe me, they don't want to do the paperwork. They'd rather write the ticket and be done with it. It mearly gives the state has the option to pass the law that allows this, and if they don't, but still arrest someone for a traffic offense that does not normally warrent an arrest, the Supreme Court will back them.

In the case of this IR thing, if the Jersey City police storm a house next week after using one of these things without a warrent, it won't neccessarily be thrown out unless this recent rulling is cited in court. I am sure that departments that have the money to have these devices will know about the recent rulling very soon and hopefully the officers will be briefed on new procedures that these departments will hopefully draw up for their use.

THE WORLD'S MOST ADVANCED MULTIMODE SCANNING RECEIVER
I have for sale a brand new handheld DJ-X2000T. 0.1-2150MHz. I bought
two and my friend backed out.
Check out these features
2000 Channels
Alpha numeric Display
Field Strength Meter
S-meter
PC programmable
Easy to read DOT Matrix Display
24 Hour Timer
Spectrum Scope to find signals easier
Fast Scan Rate
Help Navigation
Instant Search
Frequency Counter with built in digital TCXO. very accurate 1ppm
Two tone Bug Detector, finds hidden transmitters
Digital Recording 160 Seconds
FM Stereo
Attenuator, 10 and 20dB
CTCSS Decoder and Tone Scan built in
WFM, NFM, AM, USB, LSB, CW Modes
Ni-Cd Battery and Drop in Quick charger.
Antenna, Manual, Drop-in charger and battery, are included. Everything
is brand new in the box.
This radio has outstanding in performance and would please the most
advanced listener.$500 shipped.
73 Chris VE3NGW/W4 Florida

So, if it's illegal for the police to do it, is it legal for you to play with an IR sensitive CCD toy? How about taking pictures of your neighborhood with a plain old SLR camera and IR sensitive film?

It's not even legal for the police to receive your cordless telephone calls without a search warrant. Scanning enthusiasts are prohibited from doing so as well, yet that capability is readily available too.

No property lines were violated. No medical records were searched. Nobody's personal behavior was publicized in a trial. I fail to see why the use of these tools is not in the public's interest. Is it any different than the police using aircraft to find marijuana in the middle of a farmer's corn field?

It's a very scary case of the emperor's new clothes. These devices are readily available. This is stuff any high school kid could do. The Supreme Court treated it as if it were something highly sophisticated.

We are being asked to balance the rights of those who use the electromagnetic spectrum against those who hide inside it. I think this is a farce.

Note that this is substantially different from devices that probe a person's house, such as a laser interferometry on someone's window, or an X-ray inspection.

>The Fourth is one of my sore spots right now because of the
>seizure laws and their abuses in the "drug war." Now I'm not
>happy that the guy "got away with it," but if that's what it
>takes to get the police to follow the rules, so be it.

It's worth noting that in the 18th century, illegal activity was not nearly as sophisticated as it is today. Shouldn't the tools for

catching criminals match the sophisticated tools they use?

I too am concerned about police misbehavior. But let's not confuse police misbehavior with denying them the tools to do their jobs.

I don't think this search was unwarranted or unreasonable. And the court's unusual split on this issue makes me think that we have a majority of luddites up there.

>I'm concerned. How about you?
You shouldn't be. There is no expectation of privacy if you are in
front of a window. There is if you are behind a wall. The 4th
amendment is all about the expectation of privacy.

The ruling was very narrowly defined, and the court has simply ruled
that they will not allow technology to permit activities that would be
clearly illegal without the technology.

Okay, try this: think in terms of the unadulterated communications act of
1934, when reception of anything was allowed if never repeated or used for
personal gain. The police were doing official business, not "playing
with an IR sensitive CCD toy." They were also using something a little
more sophisicated than what is available to the average consumer.

> No property lines were violated. No medical records were searched.
> Nobody's personal behavior was publicized in a trial. I fail to see
> why the use of these tools is not in the public's interest. Is it any

Yes, because they were peering at a home, not a corn field.

> It's a very scary case of the emperor's new clothes. These devices

I will grant you that, on some level, this can be treated in some
way similarly to the those who believe that their cordless phone

conversations stop at the walls of their houses, but I feel very
strongly that to be used by law enforcement a warrant is needed
FIRST. LE is an organized entity, and without that requirement
systematic, blanket IR monitoring would be perfectly legal. [1]

We know that if a group of private individuals monitor the RF spectrum
and distribute their "take" to each other (as in web pages that
tune to scanning of, say, business band traffic) that they are doing
something illegal. Probably the IR spectrum should be treated the
same way. (You can't pass on what you find or profit from it in any
way, but you are allowed to see what you can, as a *private individual*.)

> Note that this is substantially different from devices that probe a
> person's house, such as a laser interferometry on someone's window, or
> an X-ray inspection.

I fully understand that this is a passive method of retrieving info.
So are parabolic mics. Are they legal to use by LE to find out what
is happening in your home?

> It's worth noting that in the 18th century, illegal activity was not
> nearly as sophisticated as it is today. Shouldn't the tools for
> catching criminals match the sophisticated tools they use?

Yes, but... an individual is innocent until proven guilty. *IF* LE
has a reason to suspect something, let them present their suspicions
to a judge, to issue a warrant. But, they have to have a bona fide
suspect, *first*.

> I don't think this search was unwarranted or unreasonable. And the
> court's unusual split on this issue makes me think that we have a
> majority of luddites up there.

I think that's a strong statement that requires a little more support...
If you find a URL for the ruling itself, pass it on. I haven't yet,
and usually the rulings are pretty easy reading for the legal layman.

Eric

[1] It's interesting to note that the NYC republican candidate is
suggesting canvassing "bad" neighborhoods with optical surveillance,
i.e. video cameras. If LE were allowed to do the same with IR, wouldn't
that bother you just a little bit?

The "War on Drugs" is lost and can never be won using current tactics! All they are doing is using this fictitious war to further erode our civil rights. The police and government rarely follow the rules anyway, if you keep allowing them to view everyone as guilty until proven innocent I am afraid we are heading for a very bleak future.

>

The reason it's readily available is because other communications besides cordless phones operate in the same frequency ranges as cordless phones (ie: Baby monitors, those little walkie-talkies from Radio Shack, etc..).

>No property lines were violated.

Sure they were. They looked into a closed private home. That's like smashing a person's living room window, looking in and catching someone doing something illegal, without actually causing physical damage.

> I fail to see
>why the use of these tools is not in the public's interest.

Perhaps you want it to be okay for the police to drive up and down your street, watching people with IR devices to see if they are doing anything illegal? Maybe they'll find you sitting in your living room listening to your scanner and they should bust in JUST IN CASE you are listening to your neighbor on his cordless phone?

>Is it any
>different than the police using aircraft to find marijuana in the
>middle of a farmer's corn field?

Yes. That is in plain view. From what I understand, the device was used to look into someone's home. That is not covered in Plain View doctrine.

Following up to my own post...

Further info is at
http://www.cnn.com/2001/LAW/06/11/scotus.heatdetector.ap/index.html

The ruling itself is at
http://news.findlaw.com/cnn/docs/kyllo/kyllo99-8508.pdf

Eric F. Richards <efricha@flatland.dimensional.com> wrote:
>> So, if it's illegal for the police to do it, is it legal for you to
>> play with an IR sensitive CCD toy? How about taking pictures of your
>> neighborhood with a plain old SLR camera and IR sensitive film?

The device used was an Agema Thermovision 210 thermal imager, and at
the end of the opinion are the images they took. This was no toy!

>> It's not even legal for the police to receive your cordless telephone
>> calls without a search warrant. Scanning enthusiasts are prohibited
>> from doing so as well, yet that capability is readily available too.

> Okay, try this: think in terms of the unadulterated communications act of

> personal gain. The police were doing official business, not "playing
> with an IR sensitive CCD toy." They were also using something a little
> more sophisicated than what is available to the average consumer.

Try this, too. I have a choice about what RF emits from my home,
generally speaking. I don't have to use a cordless phone. But I
don't have any control over the IR my body radiates, and, Art Bell
notwithstanding, there, no known decipherable EM radiating from my
brain.

>> No property lines were violated.

The opinion states that "'at the very core' of the Fourth Amendment
'stands the right of a man to retreat into his own home and there
be free from governmental intrusion.'"

Also stated is something to the effect that heat radiating from within
the house by definition reveals intimate details of the interior, and
knowledge of the intimate details is by definition a search. (Long footnote
in opinion contains dictionary definition of a search, from 19th cent.
to today, and sure enough, it fits.)

>> Note that this is substantially different from devices that probe a
>> person's house, such as a laser interferometry on someone's window, or
>> an X-ray inspection.

> I fully understand that this is a passive method of retrieving info.
> So are parabolic mics. Are they legal to use by LE to find out what
> is happening in your home?

Both active and passive measures above were discussed in the opinion,
and as precedent, a case involvin a mic similar (but not quite the
same) as above was used as a supporting argument.

>> I don't think this search was unwarranted or unreasonable. And the
>> court's unusual split on this issue makes me think that we have a
>> majority of luddites up there.

Their comment on the thermal imaging system was that it wasn't generally
available, and certainly imaging of the quality shown is better than I
could do without blowing several grand in very unusual places. Maybe
something based on an astronomical CCD could be rigged up...

> [1] It's interesting to note that the NYC republican candidate is
republican MAYORAL candidate, Michael Bloomberg. Sorry.

Try contacting your ICOM dealer to find out what ICOM might charge for the same fix. $150 + $15 and you've probably exceeded the cost of a new R2. I paid less than that at www.kjielectronics.com and I highly recommend this dealer.

Paul, KC2FNC

I was watching a PBS Frontline show recently about the
use of this technology in " The War On Drugs". And with some of the IR
systems the operator of the equipment could watch people move around
in the house.Probably some jealous Officer has buzzed over his own
home, to see if his wife was in bed alone.If not certainly soon this
technology will be for hire.
Brave New World. Am I worried? No. I shall never think,or do anything
I wouldn't do in front of my mother, ever again.Glad I'm old,and
through with all the sillyness and stupidity of youth.

Hi!
Thanks to thoes who answer me on my last question....
I would need help again now... But this time it's about moving from Sweden to the states...
I got some radios here and i don't know if i can take them over the Atlantic Sea...
I've heard about thoes restrications on 790 MHz or something...
What is this? Not such over here...
Got a IC-R2, IC-R3, IC-T7H, a swedish police scanner, Realistic Pro-70.
All the ICOM radios is of course european versions, and the T7H is opened with TX abillity
on your police frequencys... I don't want to get cought in the customs (of course)...
Anyone who can inform me on this things maybe? It's going to take some years before I move over
but it would be nice to know before I'm starting to plan too much!
And what about my callsign... Is it just to send in a formular to FCC or ARRL?
Anyone might have experience of this, who could give me tips... I would really appreciate an answer (as usually..)

Best 73's from SM4XFJ... Who know what it will be in the future...

Johan Nilsson, Karlstad (V�rmland), Sweden...
P.S Many imigrants from this part of Sweden, one day i'll join them!!!! D.S

Not correct. It was remanded back to the lower Court for further
proceedings. If the warrant was obtained based on other sufficient
evidence, the case can go forward to trial
BTW, he pled guilty, so there is no double jeopardy

The real problem with the War on drugs is there are so many sound
economic reasons for it to be lost. If the war was won, think how
many law enforcement people would be jobless, think how much money
they couldn't get to fight the war, think how much property they
couldn't seize. Think how many prison guards we wouldn't need, think
how many lawyers we wouldn't need. We have in fact created a vast
industry around the war on drugs!

Frankly, law enforcement has good sound reasons to make sure that we
continue losing the war on drugs. I think it is high time we
recognized it was lost, there is NO incentive to win it, in fact quite
the contrary, there are big incentives to keep losing. As long as they
keep losing, they get more and more money and people, and the process
becomes more and more corrupt.

It is time we called it all off.

Or get a 31 inch antenna from some local commercial radio shop, the one where the cop cars are always parked, getting their radios fixed! It will make a world of difference.

You can also get the extendable antenna at Radio shack for $10 that will work when extended.

They don't have $600 in it. Most pawn shops pay about $20 each for everything in the store. Try to sell them something worth $500 someday and see if it is not true! $20. They prey on crack head thieves and general public's ignorance. They lie and say well I have $xxx in it, that is just general operating BS.

Message-ID: <FSzV6.12280$036.2780031@news1.elcjn1.sdca.home.com>
Source record: 64278

Hi folks,

I am interested in some frequencies for a trip I will be taking next week from San Diego, north on the I-15 out through Las Vegas. I am specifically interested in any additional California & Nevada highway patrol frequencies. I am taking my BC780, and have gotten all the Riverside and San Bernadino trunking systems in as well as the following CHP freqs.

barstow area: white -- base: 42.560 and mobile: 42.740
san bernadino: copper1 -- 39.260
riverside: turquoise1 -- 39.680
rancho cucamonga: beige1 -- 39.880
el cajon: gold1 -- 39.600
san diego: orange -- 39.400
temecula: tan1 -- 39.800

Anyone who's travelled this route and may have additional frequencies to contribute I would be greatly interested. Any more CHP freqs that I might be missing, especially through the Mojave desert as its a long and hot drive. The scanner will hopefully make it more interesting, and safe. I woudl also interested in the Nevada Highway patrol frequencies as well. Every website I check seems to have different data, so if someone could confirm these for me I would greatly appreciate it :)

Thanks,
Brandon

.>I can't figure out how to program the thing! It'll do all
>the preset functions, Police, Fire/emerg, etc. But cant figure out how to
>program my selected frequencies

Here's how:
1. While the scanner is SEARCHing in any selected band, hit the hold button, then use the arrow keys to go to the freq you want to program.
2. Select the bank you want to program the frequency into (i.e., Private, Police, or Fire.
3. Use the arrow keys again; this time to go to the channel you want to place the frequency in.
4. Press PROG, and the frequency you had selected is programmed into the channel of the bank you selected.

>You can also get the extendable antenna at Radio shack for $10 that will work when extended.<

Yes! The one with the center loading coil does a pretty fair job with my Pro 91 on low freq's and still does a good job on the high ones when fully colapsed.

A US Postal Money Order can be traced if it never shows up at the destination.
If you conduct a purchase via the mail (send someone a US Postal Money Order
for an item) and the person doesn't send the item, the person can be charged
with mail fraud. Not sure of the exact process, but you are better off using a
US Postal Money Order to send money to someone you don't know.

No. We here in Australia use the digital mobile phone network and there is no way that the 'people' can listen in on their scanners. Even the Federal Govt. have problems with this technology...phone taps and the like.

Hope this helps...a little

Howdy,
Its not realistic to expect any reciever to pick up a frequency without the proper antenna. The supplied telescopic whip fully extended is about 20 inches, just about right for a 2 meter quarter wave. For frequencies below this you need a longer antenna. My 7100 works well on hf with my 134 ft dipole, not as good as an hf radio but very well for a wide band reciever.
Good luck with your scanning

Whether such devices were commonly available or not has little
bearing. After all, scanners are commonly available, yet the police
need a search warrant to monitor your cordless telephone calls.

Time out: You DO have control of what IR radiates from your home.
It's called insulation. People do it all the time.

Point granted. However, to use your argument above, it's more
difficult to control the propagation of sound waves from your house
than IR. One could insulate a room for sound, but that's not nearly
as common as insulating for thermal efficiency.

>>> I don't think this search was unwarranted or unreasonable. And the
>>> court's unusual split on this issue makes me think that we have a
>>> majority of luddites up there.
>
>Their comment on the thermal imaging system was that it wasn't generally
>available, and certainly imaging of the quality shown is better than I
>could do without blowing several grand in very unusual places. Maybe
>something based on an astronomical CCD could be rigged up...

Scanners ARE commonly available, yet Law Enforcement Officers need
warrants to use them too. I fail to understand what availability has
to do with this issue.

>>If LE were allowed to do the same with IR, wouldn't
>> that bother you just a little bit?

Yeah, it bothers me. I worry about potential abuse. But I worry
about all sorts of abuses by anyone who carries the power of
enforcement.

I have to weigh that potential for abuse against the crimes it would
help prevent. In other words, what privacy would I lose from the use
of such technology versus what functionality would they gain for
catching criminal behavior? If I lived in an area plagued by drug
activity I probably wouldn't give such measures a second thought. If
I were that much of a privacy nut, I would head for the hills.

As it happens, the police where I live are equipped with some high
tech helicopters (they're actually a dark olive brown, not black :-)
which include IR cameras, active FLIR, and video. The MD state police
could image my house, barn, and field any time they felt like it. I
really see no point telling the police in my state they need a search
warrant to turn on their camera.

Certainly not the Average Joe, as you put it, but the equipment
definitely does exist to monitor digital cellular calls.

Government agencies have it and certain well-to-do private agencies
have it too.

Your average private investigator can't afford it.

Bottom line is that your digital cellular calls are still a lot harder
for the average person to monitor than analogue cellular, simple
cordless phones, analogue two-way radios and landline telephones.

The only criminals you will catch are the potheads or actually the people that supply the potheads. Not crack heads, IV drug users, meth freaks or prescription junkies. Read any of the reports on studies done by the US government on pot and potheads starting with Richard Nixon and you will find the pot is the very least of our worries and that is what this whole IR ruling is about. It isn't used for anything else. Hey, I am all for lining the masses up for one giant urine test and shoot all those that test positive for drugs. Keep in mind though, a large sector of our government will be gone (a good thing), the NBA will cease to exist, lawyers and doctors will be in high demand as will many other professional positions.

> If I lived in an area plagued by drug
> activity I probably wouldn't give such measures a second thought. If
> I were that much of a privacy nut, I would head for the hills.

I am in the process of setting up an indoor hydroponics garden which will include a HID light similar to the ones pot growers use. Many people use them for legal purposes. Is the local LE group going to fly by my house tonight and kick in my door tomorrow because they saw a hot spot in my house? Shouldn't happen unless they have all sorts of other evidence pointing to me growing illegal stuff. If I am a pot grower it shouldn't be that hard for a professional LE group to gather

LE should not be allowed to use and sort of device that invades one home in any shape or form without sound reason and a court order.

So you have no problem with Officer Billy-Joe Bob flying silent over your house each evening the same time your young daughter (or son) and wife shower and get ready for bed. They have the new GE-Rayethon 3600-3D computerized 3D imaging system. Billy-Joe can tell your daughters hair length but not color, but he can see that scar on her thigh left from a toddler trike accident. Thermal emissions from the skin change due to skin texture and thickness, scar tissue, hair, calloused, and such. The technology just gets better. Who needs a warrant or cause, right? This will be OKAY in your book?

Glenn

Amen to that, caveat emptor. Too bad manufacturers take advantage of this confusion. The thing that I find most often is that no matter how much I rail against analog cordless phones for friends in the market for such, the almost universal response is that "I have nothing to hide".

Hi all, I'm new to the amateur radio scene and am looking into buying my first unit. I keep reading about laws passed in 1994 that caused radio manufacturers to remove or restrict certain frequency ranges. So if I buy one now, say from 30-1200MHz which ranges won't I receive? I know about scanner mods but I'm just wondering what I'll get right out of the box.

Thanks,
Frank

Normally a money order is fine. However, I just paid a guy on Ebay for a scanner by a Money Order. I verified the MO was received and cashed but the guy won't answer any emails and scanner hasn't arrived. Its like he disapperared. I think he basically cashed the MO with no intention of sending the scanner.

Ebay (ab)user id = JWGJWG (beware!)

The only thing you can do at this point is file a mail fraud complaint against the person since the US mail was used to fraud someone. The Post Office has a form to fill out. You probably won't get your money back though.

I think "mail-fraud" would be hard to prove though. He can always say he shipped it and it got lost or something or reverse things and say you did recieve it and you're the one who is the fraud.

Buying items from individuals thru the mail is always risky.

if someone calls to an analog system *loud and clear*
Or, I do know that a lot of data signels can be decoded with a computer, all
it takes is for someone to come up with the proper decoding software.

Greetings all,

I have a BC205xlt that was stored for about a year without the nicad attatched and now it refuses to wake up. A while back I heard of a keyboard sequence or something to get it going but I've forgotten what it is. The nicad holds a good charge and works fine on my BC100xlt.

Thanx in advance for any help.

You are correct. One of the precedents used in this case involved
a microphone attached to the outside of a glass telephone booth. The
ruling was that it constituted an illegal search as well.

> Time out: You DO have control of what IR radiates from your home.
> It's called insulation. People do it all the time.

I wonder how effective a superinsulated house would be against this
device? (In this case, its sophistication DOES matter.) I have no
way of testing, and I suspect that the manufacturer wouldn't tell me
how an R-45 roof would do...

> Point granted. However, to use your argument above, it's more
> difficult to control the propagation of sound waves from your house
> than IR. One could insulate a room for sound, but that's not nearly
> as common as insulating for thermal efficiency.

Hmm, windows make a great sounding board, which is why laser
interferometry (as you mentioned) is a great "active measure."

I've never built a parabolic mic, but that seems easy enough to
test (along with a peak limiter for safety!)...

> Scanners ARE commonly available, yet Law Enforcement Officers need
> warrants to use them too. I fail to understand what availability has
> to do with this issue.

See above. I probably shouldn't have stressed availability so much
but you did mention that your concern was that the S. C. was treating
this as something unavailable to the common person. In fact, their
concern was where this could eventually lead in the *future.*

I personally think that it is a Good Thing that LEO's need warrants
for scanners, mics, and now thermal imaging. When they start
listening to my monitor or scanner local oscillator emissions we'll
have to go through this again, but I'm sure it's coming.

> >>If LE were allowed to do the same with IR, wouldn't

> activity I probably wouldn't give such measures a second thought. If
> I were that much of a privacy nut, I would head for the hills.

And that is the crux of the problem with the "war on drugs." Privacy
is being eroded constantly, in the name of better security, but the
gains just aren't there. Just less privacy.

I don't think objecting to this issue makes me a "nut." The "war on
drugs" has been lost with this approach. How about we try another,
fresher approach? How could we possibly do worse?

> As it happens, the police where I live are equipped with some high
> tech helicopters (they're actually a dark olive brown, not black :-)

> could image my house, barn, and field any time they felt like it. I
> really see no point telling the police in my state they need a search
> warrant to turn on their camera.

I don't think a FLIR would be as useful as this imager was, but if I'm
wrong on that, I suspect that a typical approach would be to use this
"accidental observation" as a basis to collect other evidence legally
(such as going through your garbage, which doesn't require a warrant).
That legally gathered evidence would be used to make a case.

Whether the above sequence is legal or not, who knows? IANAL.

> admissable?

Well, the reason most people think it has limited capabilities
is because of the shimmering of the atmosphere. Now, the "faster"
the CCD (or whatever they use) becomes, that will be less of an
issue, but it is cheaper to fly a plane over your house than task
a satellite to do it.

As to the question of what would be admissible from a "fill in the
blank" platform, the ruling (and cited precedents) talked about
the fact that using your eyes didn't constitute a search and you
couldn't exactly blindfold an LEO while driving his patrol route.

So if your "ex and the neighbor's dog" (Yeech!!) are in the front
yard, than your ex is SOL. But if they're in the house, there's
an issue. I *think* -- I don't know -- if they are in the back
yard and seen from above, they are also SOL.

Nobody said that the issue was simple or easy...

An article from The New York Times that may be of interest to you guys.

04/14/98
Title: Researchers Crack Code In Cell Phones
Source: New York Times (D1,D5)
Author: John Markoff
Issue: Encryption
Description: A group of Univ. of California computer researchers announced Monday that they had successfully cracked the world's most widely used encryption code that is designed to prevent the cloning of digital cellular phones. The researchers believe that the system, known as Group Speciale Mobile standard, or GSM, was deliberately weakened to permit government surveillance. GSM is used in about 80 million cellular phones around the world and in about 2 million phones in the U.S. The researchers broke the code by "using a computer to determine a secret identity number stored in the Subscriber Identity Module, or SIM, a credit cardlike device inside the phone." But what was even more interesting than the security threat, was that "the cracking code yielded a tantalizing hint that a digital key used by GSM may have been intentionally weakened during the design process to permit government agencies to eavesdrop on cellular telephone conversations." Both the researchers and officials from cellular phone companies said yesterday that the threat of cloning was "extremely remote" in comparison to the vulnerability of analog cellular phones.

Nothing is impossible!!

The next thing to happen is that Social Services will come knocking at your
door, wanting to examine your daughter for signs of "child abuse." If any
bruises are found, the government will then confiscate your child and you get
to spend a lot of time and money, trying to get her back.

You know, if the Supreme Court had said what you just did, one could
make a very good case that the mere existence of HID lights doesn't
imply a damned thing. As a matter of fact, I agree with you on that
issue. But they didn't go there. They said the IR imaging was
intrusive.

That's where we disagree.

>will be OKAY in your book?

First, these helicopters need IR imaging so that they can safely
conduct themselves on MEDEVAC operations in marginal weather. I don't
begrudge them such tools. However, if in the course of landing or

learning to use with the IR camera system they should happen to see something unusual, I see no reason why the police shouldn't be able to use that information to get a search warrant.

Second, the Supreme Court didn't say IR imaging was ok for use in obtaining search warrants within certain limits of sensitivity or image resolution. It said IR imaging was an unreasonable violation of privacy, period. I find that to be as questionable as banning the use of ordinary scanners for monitoring cordless phone calls.

We can argue over the details of what is privacy and what isn't; but the bottom line is that such things are legitimate political considerations where the rights of two competing groups stand opposed to each other.

You know where I stand. I was wondering what people in this newsgroup (which has argued similar issues in the past) thought of such things.

I've seen those IR videos too. They're quite impressive. However I
seriously doubt they'd be all that effective against an R-30 wall or
an R-45 roof.

>> Scanners ARE commonly available, yet Law Enforcement Officers need

And that's why I found their approach to be rather frightening. They
didn't limit the resolution of an IR camera or the sensitivity of an
IR camera for casual police work, the BANNED it outright for use in
obtaining a search warrant on someone's house. That's what I call a
luddite approach.

As I've pointed out to Glenn Hansen, I find that the existence of grow
lamps themselves to be a poor basis for a search warrant. And had
that been the argument, I'd agree. Likewise, detecting LO emissions
doesn't prove much if you don't know the model of radio emitting them.
Yes, you might be able to tell it's a scanner, but you'd have no idea
what it's scanning.

I find it interesting that everyone brought up the war on drugs. Yes, this was a "war on drugs" case. But it seems to me the ruling goes much further than that.

I also find it interesting that in both the a cordless phone intercept case and now in the IR imaging case, the court didn't just limit the police's use of such technology, it banned such technology without a search warrant.

>> As it happens, the police where I live are equipped with some high

>That legally gathered evidence would be used to make a case.
>
>Whether the above sequence is legal or not, who knows? IANAL.

Well, most of us have seen video of what those IR cameras can do. I hardly consider that much of a threat.

My beef with the S. C. ruling is that it didn't just limit the resolution or sensitivity of such cameras, it banned the use of such all such cameras to look at a person's house without a search warrant.

We can argue over what is and isn't privacy versus what is and isn't legitimate use of resources by Law Enforcement in the Public's Interest. That's what politics is all about. Frankly, I don't like where the Supreme Court drew their line.

I'm rather new to scanning myself, but from the limited knowledge I do
have at this point, I'd say it sounds like you're talking about the USA
laws forbidding people to listen to cellular phone calls with a scanner.
New scanners made for/in(?) the US must block out this region in the
800 MHz range, but scanners made before the laws passed can have that
range in it and don't have to have it removed.

>So if I buy one now, say from 30-1200MHz which ranges won't I receive?

Well, I purchased the Sony ICF-SC1 and I believe that the small excluded
ranges are 823.98-849.02 MHZ and 868.98-894.02 MHz. I would imagine that
other scanners will leave out essentially the same ranges so you're only
going to be missing a very portion of the full range on the scanner.

>I know about scanner mods but I'm just wondering what I'll get right out
>of the box.

True, there are plenty of modifications available out there should you
want to do them. Once you pick a radio, look around and you should be
able to find mods for it. I hope this helps.

Source record: 64181

For those of you that are interested I finally received my BC780xlt and programmed the 900mhz trunked system that is used on Disney property. I am happy to say that the 780 does a fine job on this system. If any of you had monitored this system with a 245xlt you know that it is almost impossible with all of the intermod and adjacent freq. interference. The 780 performed flawlessly in all but a few areas of the property. Did not seem to fair well in the Downtown Disney Westside area.

Happy Scanning,
Kevin

It can't be that difficult to do it. After all a simple??? $50 cell phone can, if the call is intended for you. All??? we need are the encryption method details. Not that I have any interest, have you listened on the analogue bands (legal here)? Totally boring after the first couple of hours.You can bet many people are trying, just look what they do with software cracking.

The Thunderbirds are in town the weekend.
I'd like to monitor them during their show.

I've searched and found lists of freqs, (many)!!
Lists and lists.

My question. Anyone monitored them lately?
What freqs are they currently using?
AM or FM mode?

MANY thanks, in advance!!!

Please feel free to reply here or directly.
Just remove the nospam.

Yup, it seems to be one of those things that people do, when told that something is impossible, or "because it's there", they do it. Cracking digitally encrypted cell / cordless phones was due to happen sooner or later, but in the end what do you hear? I'd bet the same boring crap you can hear now on the analog phones. Still, nice to know that someone decided that digital encryption isn't the end all/be all of voice communication security.

Ralph

Thunderbirds 1, 2, 3 and 4 take-off at the same time in formation. A majority of their maneuvers are as a formation. The team leader, in Thunderbird 1, talks to these aircraft on 322.950 MHz in AM mode.

Thunderbirds 5 & 6 take off seperately after Thunderbirds 1, 2, 3 and 4. These Solo Thunderbirds communicate on 141.850 MHz in AM mode.

Ground crews can be heard talking to each other and to pilots on 413.025 MHz in FM mode.

You will need a scanner that can receive the military airband. I used an Alinco DJ-X2. Your scanner will also need to have selectable mode so that you can change 141.850 MHz to the AM mode instead of the FM mode which your scanner is likely to use by default.

I monitored these frequencies at an airshow at Cannon AFB in New Mexico on June 10th. 2001. Chances are good that they will remain the same at the next airshow.

As far as modifying a recent vintage scanner to receive the cell phone
frequencies - forget it. The manufacturers are required, in order to
get a scanner certified, to build a scanner which cannot be modified
without destroying it. Period. Can some genius find a way to do it?
Probably. Is is a practical thing for the average person to do? No.

However, that does not stop you from building your own scanner from
scratch which can receive those frequencies.

PRO-92 advantages:

* computer programmable - a BIG, BIG plus
* can decode CTCSS/DSC - a BIG plus
* receives LTR trunked systems in addition to MOT and EDACS

PRO-94 advantages:

* More channels (minor, you will rarely, if ever, be able to use 500,
let alone 1000 channels)
* receives some extended freq bands

Walt

If you are willing to invest in an extensive coverage receiver (yes, yes, other posters, I know that there are pros and cons) check out

http://www.yaesu.com/amateur/vr5000.html

Frequency Range : 0.1 ~ 2599.99998 MHz (Cellular Blocked)
Receiving Mode : CW/LSB/USB/AM/AM-N/WAM/FM-N/WFM

In otherwords, this receiver's range is from 100 KHz to 2600 MHz (2.6 GHz) with various modes (FM-Wide FM-Narrow, AM-Narrow, AM-Wide, Upper Side Band, Lower Side Band, and Continuous Wave).

"The incredible 2000-channel memory capacity of the VR-5000 allows an astounding array of operating possibilities! The memories may be arranged in up to 100 Memory Groups, and you can attach an alpha-numeric label to both Memory Channels and Memory Groups to aid in channel identification. The memories store operating frequency, noise blanker status, and DSP information separately, so each channel is optimized for best reception. And the VR-5000 provides a number of other special memory features:"

"To aid in finding band activity, the VR-5000's Real-Time Band Scope, used while operating in the "VFO" mode, will sweep the band in search of activity, displaying the received signals graphically according to frequency and signal strength. The sweep width may be set to 100/200/250/300/500 kHz and up to 1/2/2.5/5/10 MHz, and you can also adjust the sweep steps for best resolution in the frequency range being observed!"

Anyway the unit is $900, at least at the dealer that I use.

I do not have the unit, it's on my christmas list. Reviews by individuals are availabe in the scanner groups and the shortwave groups.

I don't believe that this is a trunk tracker, so for some people this may be a detriment. But the frequency coverage and modes are awesome. I have the following shortwave receivers, Yaesu FRG-100, Radio Shack DX-394, and a Drake PRN-1000. The Yaesu was about $600. You can tell the difference in performance (comparing shortwave receivers).

I also have the following tabletops, Uniden BCT-7, Uniden 210XL (a classic), Realistic 2039, and the portable Yaesu VR-500 all band scanner. Once again the full coverage and changeable modes of the Yaesu make it a real performer, and it (not the antenna) is small enough to fit into a shirt pocket with much to spare. (1000 channels, but no trunk tracking)

http://www.yaesu.com/amateur/vr500.html

Just my thoughts on equipment, others will also have much to say about theirs.

Visit http://n7olq.home.att.net/Radio/Galleryframe.htm for an awesome
compilation of scanner pictures.

Thanks James and Walt. So the cell phone frequencies are
the only range that must be legally blocked? How about
43-49MHz? Some advertisements mention this range is
not available and others don't mention it at all.

The FCC, in their infinite wisdom, did not require cordless phone
frequencies to be blocked. They just made it illegal for you to
listen to any conversations on those frequencies.

That is a great first scanner with the following exceptions....

1. You do not have any trunked systems in your area (Usually found on FIRE, POLICE, and some SCHOOLS)

2. You WANT to modify the hell out of a scanner! (This is one of the best (2006) for modifications out there)

and finally...

3. If you can find one with either the OPTO board or any other brand of computer controlled board installed for around $250 or less SNATCH IT UP!

Hope this help you out......that was one of my first scanners, and I hated to part with it!

578. Were You Recording on November 22, 1963

Newsgroup: rec.radio.scanner
Date: 2001-06-15 01:14:48 UTC
From: rfeinman@my-deja.com
Message-ID: <13fccd0.0106141714.35742a06@posting.google.com>
Source record: 64194

Were you a radio operator on November 22, 1963? If not, maybe you know someone who was -- e.g., a family member, friend, or fellow club member. If so, please pay attention to this, because it's very important.

The Coalition on Political Assassinations (COPA) is a Washington, D.C.-based not-for-profit group of medical, legal and forensic professionals, also interested citizen researchers who have been concerned with the major political assassinations of the Sixties for many years. COPA was instrumental in gaining passage of the JFK Assassination Masterials Disclosure Act, which created the presidentially-appointed Assassination Records Review Board. We also monitored the performance of the Board and agencies of the Executive Branch in disclosing government records pertaining to the assassination of President Kennedy, until the life of the Board expired two years ago. Although the Board no longer exists, the disclosure obligation of the agencies continues.

Now, COPA is lobbying the Congress to do what it neglected to do two years ago: a final oversight hearing into the outcome of the Review Board process and the performance of the agencies. We are collecting information about materials from that era that remain classified or withheld.

One item is the broadcast transmissions of the presidential jet, Air Force One, as it returned from Dallas to Andrews Air Force Base outside of Washington, D.C. on the afternoon of the assassination, carrying President Johnson, other dignitaries, and the body of the late President Kennedy.

We know that such a recording must exist, because we have a partial, heavily-edited transcript from the Lyndon Johnson Library in Austin, Texas. Nevertheless, all relevant government agencies have denied the existence of the actual recording.

We suspect that some ham, short wave or scanner operators may have succeeded in monitoring and perhaps tape recording the transmissions to/from Air Force One on November 22, 1963, and we would like to be able to verify the bona fides of the purported transcript, as well as help convince the Congress that there has been wrongful withholding.

If you, or someone you know, succeeded in recording Air Force One on November 22, 1963, and you have the tape, please contact one of the undersigned by e-mail.

Roger Feinman
rfeinman@my-deja.com

John Judge, Executive Director of the Coalition on Political Assassinations
copa@tidalwave.net

Thanks very much.

Some links for your perusal.
http://www.groveenterprises.com/wwwboard/wwwboard.html
http://www.afn.org/~afn09444/scanlaws/

http://www.durhamradio.com/bearcat-bc780.htm

I've always wanted to own one of the models that you listed. I don't know if these are the radios that had display problems or not. Well, not so much a problem with the display itself, but the backlighting used to illuminate it. It's an Electroluminescent Panel, which goes bad over the years. The display itself should still work, but would need to be illuminated by room light to see it. See the following link.

http://207.211.212.50/scan/Backlight.html

It appears that the PRO-2006 is the same as the Commtel 205 (?), see http://www.javiation.co.uk/pro2006.html The Commtel specs follow. I'm impressed, I wish I had the money years ago. I like the frequency range and the mode selections.

Have fun.

Main Features Specifications
Frequency Coverage: 25-520MHz and 760-1300MHz
Modes: AM, NFM and WFM
Increment steps: 5KHz, 12.5KHz and 50KHz
(30KHz steps available on US cellular)
Memory Channels 400 (10 banks of 40)
Monitor Channels: 10 (for storing frequencies found when searching)
Search Banks: 10

Sensitivity (from the manual)
AM (20dB S/N with 60% modulation): 25-1000MHz 2uV, 1000-1300MHz 5uV
NFM (20dB at 3KHz deviation): 25-1000MHz 0.5uV, 1000-1300MHz 3uV
WFM (30dB S/N at 22.5KHz deviation): 25-1000MHz 3uV, 1000-1300MHz 10uV

Selectivity (from the manual)
AM/NFM: +/- 9KHz = -6dB, +/- 15KHz = -50dB
WFM: +/- 150KHz = -6dB, +/- 300KHz = -50dB

Scanning Speed: Slow = 13 channels per second, Fast (Hyperscan) = 26 channels per seconds

Audio Output: 1.3 watts

Size:76mm (h) x 220mm (w) x 205mm (d)
Weight: 2.2 Kg

Supplied Accessories
Telescopic Antenna

Where in the USA are you based?

I am visiting dallas/ fort worth in texas on business for 1 month in mid July and there is the possibility for me to bring an unblocked scanner over for you if I like you (tee hee). You will probably find the prices very similar NZ$ versus US$.

I think I am allowed to bring it in because it will not be a 'commercial transaction'

Sorry its only texas this time.

Regards

John

It actually very easy to listen to a conversation made on a digital cellular phone.

If you are having trouble listening to a conversation on a digital cellular phone, I would reccommend turning up the volume on the handset to a more reasonable level. This is usually done by pressing the upper of two arrow buttons on the side or the front of the phone.

If you are still having trouble listening, you may not have actually dialled a number, your phone is not turned on, or you possibly have a faulty earpiece in the phone.

I hope this helps

John

I don't know that and am not willing to make any judgement one way or
the other without knowing. We are considering mil-spec gear here:
Comparing against someone's IR-sensitive CCD is like comparing an
Apache helicopter to a hang-glider, IMHO.

I disagree. I would call it being "conservative" (not in the
idological meaning) about letting technology get too intrusive.

> >I personally think that it is a Good Thing that LEO's need warrants

> what it's scanning.

That doesn't take much doing, and in fact has been done. To me.

Let me relay an interesting experience I had about this time last year... I went on what I called my "western geek and nature tour" while taking time off from the working world. One of the things I did was stop by Groom Lake/Area 51 to watch and listen (via scanner) to the planes. As is usually the case, my frequency list was old, but this was a semi-casual stop.

One of the things that I did do is go up to about 200 feet of the roadway entrances to photograph the "orange-post" boundaries, the "cammo-dudes" (security), all the warning signs, and sensors. Well, I did this on the main road without trouble, but on an alternate road, I was driving along when my scanner locked on a frequency that was quiet, then after sitting there a second or two, I got a voice announcement:

"To the vehicle driving westbound on county road <whatever>; please turn around at your earliest convenience. You are approaching a military restricted area. Thank you for your cooperation."

Someone had picked up my LO and IF from either hidden equipment or from a distance, and used it to politely try to chase me off, before things got less polite.

The point of this story is: Don't underestimate what technology can do, and don't believe things cannot get too intrusive.

(Interesting sidenote to this story is that all of my pics -- over 300 -- came out from this trip, except the border ones at Groom Lake. They were all out of focus. Best guess is that someone was using a low power IR laser to confuse the autofocus on my camera, as I was using a tripod and remote shutter release to get as clear a pic as possible of the signs.)

> I find it interesting that everyone brought up the war on drugs. Yes,
> this was a "war on drugs" case. But it seems to me the ruling goes
> much further than that.

I can't speak for "everyone" but I can say that *I* brought up the "war on drugs" because a lot of Fourth Amendment erosion is being done in its name. Some of the wiretapping laws, auto seizure laws, etc. Without a "war on drugs" none of these laws would have happened.

Well, I think we've pretty much talked it to death at this point. But
you did ask if anyone was concerned, and I'm more relieved than
concerned. Too often the Court has swung the other way in recent
times.

I think we just have to agree to disagree at this point.

Eric

I have mailed him and suggested that he installs an apache module that
compresses contents on the fly, and since the message boards and most
of the reviews are just text, it should be able to be compressed alot,
and thus saving bandwidth.

Given how far out in the middle of nowhere this place is, I can think of active measures that someone could use to do this without knowing much about your scanner. It wouldn't be any worse than putting out a pair of signals for a scanner to lock up to. Wait until you detect LO scan stopping on those two signals, and then make your announcement.

>The point of this story is: Don't underestimate what technology
>can do, and don't believe things cannot get too intrusive.

I don't consider that intrusive. You were in a public area. You were obviously attempting to conduct private surveillance of a secret installation. Why shouldn't they take such measures?

Let's get real here: with freedom comes responsibility. Our Federal Government is trying to conduct secret research and development at Groom Lake. We have to balance your right to know against our Government's duty to defend us.

Would you rather that any Tom, Dick, or Harry could go right up to the fence, record pictures, scanner traffic, and so on and then publish it

in a national magazine? Or would you prefer that Area 51 would need to be expanded 16 times from what it is?

>(Interesting sidenote to this story is that all of my pics -- over >300 -- came out from this trip, except the border ones at Groom >Lake. They were all out of focus. Best guess is that someone >was using a low power IR laser to confuse the autofocus on my >camera, as I was using a tripod and remote shutter release to get >as clear a pic as possible of the signs.)

Cool trick. I wish I'd thought of it.

Frankly, I think these are harmless ways of keeping secret things secret. I admit, I have a mild curiosity itch about Groom Lake too. I wouldn't mind learning what it's all about too.

I have very little doubt they're conducting highly secret research. I wouldn't be surprised to learn of some new one orbit LEO spy craft they've been working on. That isn't the sort of thing they could continue doing at Edwards AFB without being discovered.

And who knows what else they might be doing there... On the other hand, I rather doubt an approach as direct as yours would reveal all that much. And no, I don't begrudge the US military's wanting to keep this under wraps one bit.

Yes, this is factory new, in unopened box.

I'm the same or less than many dealers, and I have it in stock. It will ship within 24 hours of receipt of payment, via whatever speed you are willing to pay for.

If there are any other questions, lemme know!

Thanks,

-hijax

Well, they'd have to detect an LO and an IF to determine what the
target freq was to make the announcement. Your earlier post suggested
that would be difficult. I'm saying it was done.

> >The point of this story is: Don't underestimate what technology
> >can do, and don't believe things cannot get too intrusive.
>
> I don't consider that intrusive. You were in a public area. You were
> obviously attempting to conduct private surveillance of a secret
> installation. Why shouldn't they take such measures?

No, you've missed the point. That same technology could be used by
an LEO sitting across from your home or in a roving vehicle like
the british "TV license patrols."

And, for the record, I was on a *public* road on *public* land when
the announcement occurred. I had passed a cattle watering hole
about 1000 ft back before the announcement occurred.

But forget Groom Lake. That's just where this happened. Transplant
the device into the hands of your LEO. You stated earlier that
such a device was a ways away. I am saying that it is here.

Whether Sgt. Rock of the local LEO has his hands on it is another
matter; but when aimed at your house, it becomes highly intrusive.

> Let's get real here: with freedom comes responsibility. Our Federal
> Government is trying to conduct secret research and development at
> Groom Lake. We have to balance your right to know against our
> Government's duty to defend us.

True enough. I wasn't interested in any secrets, and my $99 Sony
scanner (which I fully expected to get confiscated if I misstepped)
wasn't exactly an ultra-sophisticated tool. The closest I heard to
anything "juicy" was a conversation that ended with:
"shouldn't we go green with this?"
"uh.... going green."

What should be classified and how is another thread that we shouldn't
get into here as it has nothing to do with the S. C. ruling we
were discussing... but I should mention that in the 80s some of the
best info about Groom Lake was leaked by the Soviets... so what is
being kept secret from whom?

> Would you rather that any Tom, Dick, or Harry could go right up to the
> fence, record pictures, scanner traffic, and so on and then publish it

Already been done several times. But that's another thread...

> >(Interesting sidenote to this story is that all of my pics -- over

Again, not the point. The poing is that the S. C. ruling was worried
about the future abilities of such intrusive devices as the IR viewer.
In the case of scanner monitors, that future is now, and I've been
there.

593. Multiband NMO antenna info?

Newsgroup: rec.radio.scanner
Date: 2001-06-15 18:22:18 UTC
From: "M. Schneider" <markinokla@juno.com>
Message-ID: <cjsW6.3483$7u2.783@newsfeed.slurp.net>
Source record: 64060
Cross-posted to: alt.radio.scanner,rec.radio.scanner

After years of using dualband commercial antennas for my mobile scanner, I've finally gotten a trunking scanner for my car, only to find my antenna is deaf on 800 MHz trunks. Any suggestions on a good multiband mobile antenna with a NMO mount. I need to cover 140-174, 440-470, and 850-866, with 39-46 MHz a plus. The antenna needs to mount to a NMO mount, although I do have adapters for NMO to SO239 and NMO to 3/8-24 thd, I'd rather not have to use them. The system I'm wanting to monitor is the Okla. Highway Patrol, with the nearest tower about 35-40 miles away. I can get them by using the antenna from my BC245 on a window-lip mount, so it shouldn't be a problem for a decent mobile antenna. Posting to the group(s) is preferred, as others might benefit from this information.

Thanks and 73,
Mark K5MAR

Well, that's the claim, although I can say from my experience that the
airspace above it is still busy as hell and the traffic to and from
the base is still heavy. The locals claim no difference in traffic,'
either, and "The Best Cat Houses In Nevada" is still a hot seller to
military guys appearing from "nowhere."

My local PD has switched to 800mhz digital. Is there a scanner that can now receive digital transmissions for me to hear?

thanks

596. The Trunked Radio Information User Forums

Newsgroup: rec.radio.scanner
Date: 2001-06-15 19:48:18 UTC
From: "news.swbell.net" <lindsay@lcblanton.com>
Message-ID: <gEtW6.41$8O1.33880@nnrp2.sbc.net>
Source record: 64063
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap

Hello all users of the Trunked Radio Information User Forums!

Over the past few months, the user forums have grown tremendously and are becoming more popular than ever. We now have close to 1000 posts on the boards, with new members joining everyday. Just in case you forgot about the forums, come back and visit us at:

http://www.trunkedradio.net/cgi-bin/Ultimate.cgi

You know, as more users realize the disadvantages of hundreds of mailing lists and feature-less bulletin boards in place today, they are beginning to realize the *advantages* of a consolidated feature-full discussion forum. The Trunked Radio Information Discussion forums are attempting to help consolidate the hundreds of mailing lists -- which are bandwidth intensive, unpopular, full of Spam, and a "force down your throat" approach. How many lists and discussion forums out there today allow you to pick what you want to read, modify what you have already posted, and be notified when someone responds to a question from you? None that I can find, but the Trunked Radio Discussion forums provide those features today!

I want to take a quick moment and let you know about some of the recent enhancements to the boards, which will make your "Trunked Radio" experience more enjoyable:

1. We've added a few additional forums, including a UK discussion forum for those trunked radio enthusiasts in the United Kingdom.
2. A number of colors and views enhancements have made the forums more readable and usable.
3. Posts now contain more detailed information on registered users, including how many posts they've participated in, and where they are located.

Future enhancements coming in the months ahead include:

1. The ability to attach files to messages on the forums.
2. The ability to attach a picture of yourself for your profile.

If you have any questions, suggestions for additional features, or otherwise -- drop me a note.

Warmest regards,

Lindsay Blanton

Not yet. Uniden may have one in a year or two. But, is your PD
encrypted? The digital scanners you will be able to buy will most
likely not allow you to receive encrypted material.

I've heard rumors but so far nothing is out there.

2 rumors: one being the addon board for the 780, and another I saw on strongsignals which said WinRaDiO might be releasing some type of digital trunking software. We'll just have to wait and see.

I also recall that Uniden was supposively working on a digital scanner. I know how you feel :(

It is my understanding (I read the decision) that the Police obtained
the warrant based on the evidence gathered by the IR scanner. They
could never just go into a house and seize evidence without a warrant
- except under emergency conditions (kidnapping, evidence about to be
destroyed) they could NEVER do that. So the issue for the lower Court
is the validity of the warrant that was obtained, in light of the
decision

That is not a well reasoned position you are taking. The Police simply can't use ANY means to look inside someones house without a warrant. Period (what you can see thru an open window from the street is different, there is no expectation of privacy there)

Now with all the rumours about some manufacturers introducing digital scanners soon, does anybody have any idea what will these scanners actually do? (or should be able to?)

I mean, specifically what modes or types of signals they should be able to receive, what frequencies or modulation modes, etc.

Will their only difference be in that they will be able to receive such digitally coded signals, or will there be also some operational differences, for example in the search functions etc.?

And finally, will these scanners be in fact legally sold to public?

Of course, Uniden is keeping things pretty close to the vest, but I'd expect something like the 780 with the added ability to render the APCO 25 digital mode into analog audio. No DES decryption, no cellular/PCS mode decryption. Yes, it will be legal to sell, as the APCO 25 digital audio is not, in fact, a method of encryption, just a standard for transmitting digitized audio. The encryption capability is included in the standard, but, technical arguments aside, decoding encrypted transmissions, be they digital or analog, is not legal. To rephrase: digital audio is not the same as digitally encrypted audio. You can legally listen to digital audio, (if you have the means), you can not legally decode and listen to encrypted audio, even the old analog phase inverted scramblers.

If they involve any sort of decoding/decryption they will be illegal. As far as I know it is illegal to decode or decrypt any radio transmission

Your response echoes my own understanding too, hence I still remain confused why any manufacturer would contemplate introducing such a product if they could not sell it to public (unless it was aimed squarely at the Government market).

But the other reply I received (from Mark Schneider) says that:
" You can legally listen to digital audio (if you have the means), you can not legally decode and listen to encrypted audio, even the old analog phase inverted scramblers."

This certainly sounds logical, but I believe this may not be quite true (at least in the US). For example, paging codes (POCSAG or Flex) are non-encrypted, and publicly well documented. But selling pager decoders or software to public is (as I am led to believe) illegal?

Can anyone shed more light on this please?

Patrick

To all:

Hi!! My name is Chris. I am the list owner and moderator of a brand new scanner mailing list!! It is called "CenCalScan" and is based at Yahoo. My list is for scanner enthusiasts that live in central California (Sacramento-Los Angeles).

I do have members that live in such places as Oregon and New York. So, the part about living in central California is not set in stone.

Once you subscribe, you can post frequencies and any breaking events that you feel would interest us!!

If you do not live in central California, please spread the word that this list is available!! I would like to see my list be as successful as possible!!

This law as far as I know, applies to the US and not Australia.
The digital boards, in plain, will be able to decode APCO25 standard digital ASTRO transmissions, providing they don't have an encryption layer added.
Who uses these in Australia you might ask??
Well a number of state police forces currently use this standard, as well as the Federal Police (when not using encryption), the Australian Protective Services, just to name a few. Any government body that uses this standard that doesn't want you to listen, such as the NCA or certain drug divisions, already use encryption on the digital standard, so they are way ahead of us really. You could probably expect the majority of police forces in Australia to use this standard for the capital cities and high population density areas by 2005.
The add on board will be another mode for the receiver, and it shouldn't effect scanning or searching.

620. Uniden MR8100 Stopped Functioning- Please Read!

Newsgroup: rec.radio.scanner
Date: 2001-06-16 07:45:49 UTC
From: dirty_harry74@nospam.hotmail.com
Message-ID: <3b2b0c80.4415789@news.microflash.com>
Source record: 64087

I am looking for help with a problem with my MR8100. I had it in storage for about 8 months before which the radio worked fine. I hooked up the power supply tonight and connected an antenna- the "Turbo Scan" display comes on but the radio won't lock on active signals. I checked to see that the frequencies I programmed into the 8100 were still stored in the radio and they were indeed there. I was thinking maybe the unit is locked up and was wondering if anyone knows if there is a master reset proceedure? When I turn the squelch down there is noise in the speaker and the radio lights up like normal. I can't imagine my 8100 would go dead sitting on a shelf???

Anyone with ideas or a reset proceedure please post here or feel free to e-mail. Also I would be interested in locating a service manual for the MR8100. Thanks in advance for your help!

Harry

Does this mean it literally isn't possible to listen to the GSM mobile phone network as the scanner does not support that type of transmission or it would just be illegal?

Seperate issues.

Listening to any phone conversation no matter what the system (GSM, HF, phone patch, portable phone) is illegal in Australia. Decoding and listening to digital transmissions is not illegal in Australia - as far as I'm aware it's not event illegal to decode and de-encrypt encrypted digital transmissions - the problem being that unless your the NSA its just a bit more then your average PC can handle. ;)

In regards to GSM - I'm not aware of any publicly available equipment to decode it anyway.

APCO 25 is at present one of the main digital standards in use (especially in the US) so this would be the first one that a company would make a decoder board for. Expect others in the future.

An article from The New York Times that may be of interest to you.

04/14/98
Title: Researchers Crack Code In Cell Phones
Source: New York Times (D1,D5)
Author: John Markoff
Issue: Encryption
Description: A group of Univ. of California computer researchers announced Monday that they had successfully cracked the world's most widely used encryption code that is designed to prevent the cloning of digital cellular phones. The researchers believe that the system, known as Group Speciale Mobile standard, or GSM, was deliberately weakened to permit government surveillance. GSM is used in about 80 million cellular phones around the world and in about 2 million phones in the U.S. The researchers broke the code by "using a computer to determine a secret identity number stored in the Subscriber Identity Module, or SIM, a credit cardlike device inside the phone." But what was even more interesting than the security threat, was that "the cracking code yielded a tantalizing hint that a digital key used by GSM may have been intentionally weakened during the design process to permit government agencies to eavesdrop on cellular telephone conversations." Both the researchers and officials from cellular phone companies said yesterday that the threat of cloning was "extremely remote" in comparison to the vulnerability of analog cellular phones.

Nothing is impossible!!
Mike

Hey Allan, nice try.

But you left out important step--you have to enter program mode before you go off to the channel!
If you don't hit program before you go to item #2, you just end up with your selected "channel" sitting there with the CH blinking on and off.
These uniden scanners without number buttons are a pain to program. Much easier to use a scanner with keyboard that has NUMBERS, and I might add, an old fashioned knob like the radios my great grand pappy used would be even a greater improvement!

Just my 2 cents.

Hello,

Would anyone be kind enough to send me the RS232 command listing for
an AR7000 radio scanner. It doesn't come with the radio's user manual
and I haven't had any luck finding it on the net.

Also, if this radio came with any management software I would
appreciate it greatly if you would sent it along also.

Thank You in advance.

On that note, I read somewhere, (can't remember where) that there are two levels of encryption. The strong encryption for phones sold in 'good' countries like Australia, US, the EU and then a weaker type for trouble countries like Iraq etc.

Craig.

The crack really had nothing to do with intercepting GSM communication.
What they did was they succeded in reading out vital information
from a SIM-card. But this required physical access to the card.

Not really.

Decoding an APCO-25 digital transmission would not be illegal. It is a common standard used for public safety communications - and is published publicly for all vendors to develop products for. You don't have to license the standard (but you do the vocoder).

Now, if the transmission is encrypted, meaning the intention is for only privileged persons to hear the communications, then yes, it is illegal to monitor.

There is a distinct difference between "decoding" something and decrypting something.

Patrick, Ebert, Martin (and others)

This is why, in my response, I very carefully tiptoed around the term "decode", which can be used in different ways. As a digitized audio source, the D/A (digital to analog) converter "decodes" the digital signal source, no matter if it's a CD player, DVD, or APCO 25 radio standard transmission. This type of "decoding" is not prohibited by law, and provides the basis of the upcoming APCO 25-enabled scanner to be introduced by Uniden next year.

The other type of "decode" applies to the decryption of signals that have been intentionally encrypted in order to prevent their monitoring by other than the intended parties. This would apply to DES (Digital Encryption Standard) as well as the older speech inversion methods used in analog radio systems. This has been specifically prohibited in the laws passed by Congress.

The pager standards, such as POCSAG and Flex, are readily available and converting software was widely available at the time the ECPA was passed. The ECPA also made "decoding" these transmissions illegal. This was slightly easier to enforce than the rules against monitoring analog cellphones, as sale and distribution of the needed software was prohibited IN THE UNITED STATES. The software is usually available on various overseas websites.

For Uniden's press release on the upcoming APCO 25 scanner, go to this site:
http://www.telecomclick.com/newsarticle.asp?Newsarticleid=198391&mode=print

Needless to say, I'm not a lawyer. The above is my opinion based on reading the relevant laws and has no legal standing. However, Uniden seems to feel the same way, and I have to think that they had their lawyers go over all the relevant laws VERY carefully before deciding to spend the R & D money to develop the new scanner. Remember, the government tried to block trunktracking radios, and the judge's opinion rejecting the government's case seems to support the legality of monitoring any public safety signal that is not intentionally "encrypted".

Thank you, I am interested in the technical details.
Would you be able to give me some links as to the publicly
published specification? There are a lot of APCO-25 links on the Web
but I could not find any detailed technical specs beyond some
very superficial info.

Who licenses the vocoder?

OK, but does this also apply for the US? I believe that decoding any
digital communication (including for example unencrypted POCSAG
paging) is illegal in the US?

Look for example at Bill Cheek's case (who was arrested for only
selling a 4-level FSK decoder, which I believe is essential part of
APCO-25!).

Pat

What you are saying makes a lot of sense, but what I am still
concerned about are the following two facts:

1. POCSAG is not intentionally encrypted, yet its decoding was made
illegal by the ECPA. There appears to be no fundamental conceptual
difference between POCSAG and APCO-25: In their basic form, both are
digitally coded, unencrypted signals. (The fact that they are using
different modulation and coding methods should not be relevant.)

2. The Bill Cheek case: He was apparently arrested for selling a
universal 4-level FSK decoder only (not even including any decoding
software for any specific coding method)?

I am not a lawyer either. But I would not be at all surprised if the
government tries to block digital scanners by extending the ECPA,
using POCSAG as a simple precedent...

I am looking for someone in the Columbus area to swap .asc and .spg files
for the Pro-92 scanner.
If someone would like to do some data file trading, please email me with
what you have and I will send what I have in return.

Mike

There is nothing illegal about monitoring the cordless phone calls, unless you have to descramble or decode it, then it becomes an issue. I dont think I would record it though.

The generally accepted procedure is to upload frequency files to a
site, PRO-92.com, for example, so that all may share, contribute, and
use them. Trading them like baseball cards is frowned upon.

Walt

Paging signals are illegal to receive because they are not "public service" transmissions as defined by the statute. Public service agency transmissions are specifically excluded from the ECPA.

Yes, they will sell it to the public. The news media is who they think their primary customer will be.

In this discussion it is important to keep in mind that the news media will vigorously fight any attempt by a police agency to make it impossible to monitor their routine operations. They want the communications to be open. The news media does not want to use a radio "loaned" to them by an agency because that's a conflict of interest. Don't ever get fooled into believing that the news media and the police have anything but a cool relationship at best. In most towns it is downright adversarial. Here in Louisville the media believes that the public, including them, has a right to know what a taxpayer-supported agency is doing day-to-day. We're not talking about the NSA here.

The police here experimented with encrypted radios and now only use them for narcotics/tactical type operations. Also remember that encrypted radios are a real pain to use and maintain. They also worry about theft of the radios should they try widespread encryption.

As far as APCO-25 goes, I think the adoption of this standard is going to be much slower than people believe. These systems are REALLY EXPENSIVE. Many agencies are having a very hard time justifying throwing out a radio system that is working albeit with outdated technology. It's just too expensive and there are too many other things that governments are being asked to do.

I will not be running out to buy an APCO-25 scanner immediately. I have bought a Trunk Tracker and the only remotely interesting thing on it is the airport security people. There are only a couple of operational systems here that are just systems that are leased to businesses. I can only get off on hearing someone in a mobile unit taking the lunch order for the office so many times. APCO-25 promises to be much the same thing.

I'm thinking of taking a scanner and using it in England, but first I will be visiting France and Austria. Dont know the language, so it will remain turned off in those countries, but it will still be in my posession.

In England, however, I intend to use it. What are the legal implications for possession and/or use in all 3?

FYI: It covers 500khz to 1300mhz unbroken.

TIA
Steven

: Probably. Is is a practical thing for the average person to do? No.

You don't need to modify the scanner. Just make yourself an equally
illegal (in the US) frequency converter.

The cellular providers are fairly rapidly shifting over to digital service.
When that is completed, none of the current scanners will be able to receive
the cellular transmissions - even if they can tune to the proper frequencies.

this is *completely* incorrect in most small-to-medium markets. the
media is in bed with the pd and public services. in return for no
unfavorable press, the city or pd furnishes access to networks and
crypto.

and no one has *ever* proven to me that the media has special
dispensation under law to scan networks and agencies that i as an
individual cannot. or to cross restricted lines that pd or fd has set
up. the fact that they are able to points up the incentuous nature of
the relationship and the duplicity of both parties.

It's not the similarity of the systems, it's the use. Pagers are used to convey information that has been deemed "private" according to the laws passed by Congress. Just as the ECPA made the monitoring of analog cellular systems illegal, even though there were thousands (tens of thousands, hundreds of thousands?) of scanners already in private hands that were capable of listening to them. The ECPA specifically excluded the non-ENCRYPTED (not non-DIGITAL) public safety transmissions from the ban. A U.S. District Court judge has since ruled that the public and the media have a right to listen to a governmental agency's radio traffic. For the text of these rulings, (which are extremely interesting), see the following links:

http://www.afn.org/~jlr/gass1.txt
http://www.afn.org/~jlr/gass2.txt

>
> 2. The Bill Cheek case: He was apparently arrested for selling a
> universal 4-level FSK decoder only (not even including any decoding

Actually, as I recall, he was not arrested for selling the devices, per say, but for advocating their use in monitoring MDT transmissions and pagers. The level 2 and level 4 data slicers remain readily available commercially, as they have many other uses, such as for the reception of satellite wx pictures. I don't have the information as to the exact charges he was arraigned on, but I believe it was something to do with a conspiracy to break the law or inciting others to break the law. The charge came about after some idiot intercepted MDT messages in NYC and published them on the internet. Cheek's site at the time contained either the software itself or links to the software. Note that the case never came to trial, so weither or not it would have actually stood up in court is hard to tell. But the circumstances surrounding the case seem to indicate that they (the prosecution) were trying to make it as hard as possible for Cheek to defend

himself. It suggests that they expected Cheek to accept a plea bargan which would have kept him out of jail and given the government a cheep case to use as precedence in subsequent prosecutions.

>
> I am not a lawyer either. But I would not be at all surprised if the
> government tries to block digital scanners by extending the ECPA,
> using POCSAG as a simple precedent...

It wouldn't surprise me either. But if you read the judge's rulings in the Gass case, (links above), I personally think they might have a rough time. Given that Uniden can afford even more, better lawyers than Gass, it doesn't seem likely that the government would be able to offset the precedence established by Gass's case and the previous ones cited in the Gass rulings. It should be possible to get any new laws barring digital police scanners overturned. Uniden's pockets are a lot deeper than a private citizen's, they can afford to appeal any unfavorable rulings. As I said previously, if Uniden didn't have a reasonable expectation that they could legally sell such a scanner, they wouldn't have started out to develop one in the first place. In fact, I wouldn't be surprised if they didn't count on some initial government resistance as a way to boost sales. Look at what the ECPA did to sales of unblocked scanners. The ability of a scanner to receive cellular communications boosts the resale price by $50-$150. If people think the government might be able to get a digital scanner pulled off the market, the initial sales will probably go through the roof, as everybody scrambles to get one before they get pulled from the market.

I had one up here in Minnesota for about 6 years and it withstood some nasty thunder storms and blizzards. It is a wonderful antenna. I finally took it down due to decreased performance, it rusted pretty bad on spots. I have not replaced it yet with another scanner beam since I found a RS antenna on closeout for $10.00 and it is working ok.

The scanner beam is very directional so a rotor is a good idea. I did not use one since all of the stuff I typically listened to was south. It also grabbed some good lowband VHF skip using it on my 2006. I used to get stuff from the south, south east on a pretty regular basis. I did some positive ID's of stations in Florida and Georgia.

Are you considering the Grove Beam because of its price?

I have a KMA 4113 and it works quite well. Might want to check out
http://www.qsl.net/w4kma/price_list.htm. They are a bit pricey but built
well and the owner is VERY helpful and supportive.

Standard disclaimer, don't work or know the folks other than buying one
of their antenna..

Spying on one's minor child. A new concept, as in days of old, cursory searches of your child's bedroom wasn't considered unreasonable. Enter the government, endlessly insisting on privacy between individuals while endlessly contemplating ways to violate privacy between government and individuals.

Problem is that if you investigate your child's room for illicit paraphernalia, you are violating their privacy. If your child would happen to possess illicit paraphernalia and the authorities discover it before you do, you can have your home confiscated under the provisions of the anti-drug laws that exists in the U.S.

The government will assure that you're damned if you do, and damned if you don't. Not a very nice way to live is it?

So, perhaps no one has gone to jail for listening to the conversations of their minor daughter, but I can assure you that people have lost their homes for not being aware of the activities of their children.

Distrust! How about children engaged in activities that the children vehemently deny. Does this not produce Distrust in the adults?

It is illegal to speed on the highways, but certainly the penalty for illegal wire tapping is far greater than a speeding ticket.

As regards a child's privacy, I have just posted this elsewhere in this newsgroup, but it seems to fit here also.

Spying on one's minor child. A new concept, as in days of old, cursory searches of your child's bedroom wasn't considered unreasonable. Enter the government, endlessly insisting on privacy between individuals while endlessly contemplating ways to violate privacy between government and individuals.

Problem is that if you investigate your child's room for illicit paraphernalia, you are violating their privacy. In article <3B25624E.3DD0@netusa1.net>, Chris <csnichol@netusa1.net> wrote:

> OK somebody explain to me how this thing is worth $300

The OKI 900 cellular phone is one of the most flexible analog cellular telephones ever made. By itself, it can be easily used to scan conversations, for example. It can be teamed up with a PC and some software called an Experimenter's Tool Kit to do the following:

"One program is designed for testing the phone and allows a technician to activate many of the OKIs built in test modes and functions, such as tuning to a particular channel, activating carrier, sat, signaling tones, etc.

Another program can be used to access the phone's user features, such as programming NAMs, or uploading, downloading and editing the phone's 200 alphanumeric telephone number memories on the PC.

A programming library object module is supplied to allow you to write your own programs to access the phone in both normal operating mode and in test mode. The library contains functions such as tuning to a channel, turning carrier/audio/sat-tones/signaling-tones on and off, reading received signal strength, sending and receiving digital control messages, and sending and decoding DTMF tones.

Two programs are supplied in source form that give examples of writing applications in either of these modes. One of these programs shows how the PC can completely control the cellular phone, making and receiving calls while the phone is only operating in its test mode, with the PC handling all of the cellular protocol and messaging functions. The other program simply controls the phone by simulating presses on its keypad from the PC."

I don't own one of the phones nor any of the software, so your mileage may vary. I'm also not interested in paying $300 for one, but obviously somebody else is.

Generally, yes. Especially if the charger is of the "slow" type, that is, it takes 10 or so hours to recharge. If the recharge is/was "fast", on the order of an hour, there might be some problems.

Since the NiMH batteries most likely will have greater capacity than the old NiCds, charging time will be longer.

Yes you can use the NiMH cells in your radio and charge them with the
internal charging
circuit. It takes about 24 hours to recharge NiMH cells with chargers
designed for
NiCads. The NiMH cells will last 40% to 60% longer than NiCads. They go
ALL DAY!
The NiMH voltage will drop off very quickly the your radio will go off
with little or
no warning and NiMH are much more sensitive to over charging.

Please see #5 below, this seem relevant to your problem.
http://support.tandy.com/support_electronics/8564.htm

PRO-43 (200-0300) Troubleshooting Faxback Doc. # 16691 IF YOU HAVE PROBLEMS...
We hope you don't, but here are some suggestions.

#1. Trouble Check Does not function. Batteries correctly installed? Batteries
are good?

#2. No or poor reception. Antenna correctly installed? Poor reception
environment (such as a metal building)? Frequencies correctly programmed?

#3. Error appears on the display. Programming error - confirm procedure.

#4. Keyboard does not work. KEYLOCK set to LOCK?

#5. Keys do not work and display is random
While holding down both CLEAR and O,. turn the power on to reset the scanner.
NOTE: This clears all information stored in the scanner.

If none of the above suggestions help, take the scanner to your local Radio
Shack store for assistance.

they researched into that,amazing GCHQ and others announced when GSM started
that they needed to access the system for there monitoring work and hence
the system was change to make it easier,commercial equipment is available at
crazy prices,but only available to certain organisatons.

as for laws then remember every country has different laws so be a bit more
specific and say what country is being reffered to,as with cross posting
things get confusing.

in the UK most monitoring is illegal,but tolerated.

regards Paul

Hi Patrick.
Many of the posts here concerning the laws of digital transmission
are based on American laws, and as this is AUS.RADIO.SCANNER, these
laws don't apply here. Austrlia has no laws against decoding APCO25
digital transmissions. Our scanning laws are very lax to say the
least, whihc is good for us. Good to see our country is free in some
way much more then other so called free countries.
Only thing our laws prohibit in regards to scanning is the
interception of any telephone related transmissions, such as cellular
phones, cordless phones, sea phones and OTC RFDS radio phone patches,
and any other phone patches I have not mentioned. Other then that, we
are free to listen to pretty much what we like. We are leggaly able to
decode pagers, MDT and so on.
Most users in Australia who run digital modes, and don't want to be
monitored run various forms of encryption, thus preventing the public
from listening. The new police RD-LAP MDT system is a good example.
Even Australian GSM phones, as someone has stated, have a high level
of encryption.
Other countries should follow suit, instead of passing laws to stop
people listening, the problem should be nipped at the source by the
people who don't want to be monitored.

Bill,

Like others, you are confusing "decoding" with "decrypting". The means to convert digital audio to analog audio (decode) are standardized under the APCO Project 25 standard, and are the same for roughly 95% of all digital trunking systems installed in the United States. If the signal has also been encrypted, then that's a horse of a different color. The forthcoming digital scanners wouldn't be able to decrypt those signals, even if you had the key mentioned, because the ability to do so won't be there.

Davo,

Sorry, I hadn't paid any attention to the newsgroups this was being sent to.
I'll delete the UK and AUS groups on any further posts I make. If people
read the laws and court rulings closely and pay attention to the details,
then they'll realize that the U.S. doesn't have any laws against monitoring
APCO Project 25 digital signals either, as long as they are not also
encrypted. If Uniden couldn't sell a digital scanner, they wouldn't be
developing it. And I agree wholeheartedly with your last point, regulate
the source. If they don't want people to listen in, they should encrypt the
signal.

You want the "B" version. If you look at the back of the scanner itself, (not the box), and find the Radio Shack catalog number, you should see the suffix "B" after it, i.e.; #20-522[B]. That indicates it's the latest, and greatest.

It's on sale right now @ $249.99

So, it is ok to enjoy electronics as a hobby, but if John Law, feels you have gone too far he can enter youre home and seize all electronics related property in your possession. Yes that means equipment, computers, logs, records, and anything within sight of your equipment. Granted TK was a mad bomber, but did the feds need to take his house? It will probaly be an exhibit in the FBI's Museum of Criminology.

Never under-estimate the power of a "Search Warrant".

But, back on the subject of MDTs, there is a new Palm model called "Pocket Blue". It may or may not be legal to intercept and translate the signals to and from MDT, but to reprint the info on a website is criminal. As we enjoy listening in on the Public Safety Net, it is ok to listen, but not ok to repeat what you hear, share recordings, or commit crimes while doing so. I don't even think it is legal to transcribe the broadcasts on to paper.

Is it ok to construct an interface between a RF scanner and a PC, to receive the transmissions? Are these available?

Halcitron

676. RF interference in NYC ☐ a success story

Newsgroup: rec.radio.scanner
Date: 2001-06-17 17:41:52 UTC
From: mabbey@hotmail.com
Message-ID: <5e3cac5f.0106170941.9dc14d2@posting.google.com>
Source record: 64143

I'm an avid scanner listener who recently relocated to Western Queens in New York City. This placed me in the center of an extremely hostile RF environment.

With a new Uniden BC 780 XLT and a quarter wave ground plane antenna cut for 120.0 MHz at 40 feet I set out to monitor the aviation band.

The results were disastrous. I could barely hear commercial jets that were flying in LGA's holding pattern directly above my location. What I did hear were S9+ levels of noise ï¿½ with 106.7 FM coming through the scanner clearly on a number of aviation frequencies. The BC 780 XLT was completely unusable for aviation monitoring in Western Queens.

I looked into purchasing a commercial band pass filter for the aviation band. DCI had nice looking four pole and eight pole band pass filters that fit my requirements, however at $229 / $349 (US) respectively, I deemed it too expensive for my hobby.

Around the same time I came across a small ad for a "Broadcast FM Filter" in an Amateur Radio catalog from PAR Electronics. I promptly e-mailed PAR with a request for the specifications of the filter. I learned that the filter would put a notch at 88.56 MHz, 98.80 MHz, and 107.04 MHz. The average notch attenuation was ï¿½41.17 dB. At $69 (US) this was worth a shot.

My two custom requests for PAR Electronics:

Knowing that 106.7 FM was the major offender causing a large portion of the interference, I asked PAR if they could tune the high cavity to 106.7 FM. They did ï¿½ and at no extra charge!

I also wanted to continue to use UHF connectors. I asked if they could replace the BNC connectors with UHF (SO-239) female connectors. PAR Electronics said they would do it, again at no extra charge!

Additionally PAR e-mailed me the plot of the actual filter that was custom tuned and fitted for my needs, which showed the high cavity notch right on 106.7 FM, as requested.

The results? After installation, 100% of my FM Broadcast interference is gone and I can monitor the aviation band uninterrupted. LGA, JFK, and ENW all are received crystal clear.

Thanks PAR Electronics. You provided a solution that worked.

Hello,
I have recently discovered the Memorex (Uniden?) Scannocular, and am interested in buying the product if it can perform as advertised. Can anyone with knowledge or experience with this product contact me by email with their personal experience? www.strongsignals.net doesn't have much info, and I would like to find a review of the product, but searches on the net are coming up with nothing. I would like to use the unit for sporting events like Nascar and Air shows, and local listening. I like the 800 Mhz capability too.
You can see what I'm talking about at:
http://www.shoplifestyleonline.com/sc001.html
Thanks,
Scott

Mike,

You are right, PAR Electronics is a great example of a first-rate company that believes in delivering a quality product and providing great customer service. I've had the occasion to correspond with Dale, the owner, on several occasions and always got prompt, helpful replies. I've been using their pager notch filter on my mobile scanner for 4 or more years and it has paid for itself many times over. There are those who might think the $60-$70 average price for one of these filters is a bit high, but believe me, it's worth every penny!

>that exists in the U.S.
>

Agreed. People have been prosecuted for taping their children's phone
conversations. A man in Phoenix was arrested for domestic violence
for kicking in the locked door of a teenage child - who was engaged in
the felonious activity of smoking marijuana and was refusing to open
the door. I attended University in the State of Arizona, and police
routinely kick in doors in that state when they suspect a felony is in
progress on the other side...

Recently in my area, a couple lost their home, and their jobs,
because their two teenage son's were selling drugs that they had
stashed in the basement of the family house. The police deemed that
it was a criminal enterprise. The parent's claimed they had no
knowledge of the activity and passed lie detector tests to that
effect... But the home was still put up for auction.

One of my friends was having problems with his teenage daughters.
Mostly smoking and chatting with ADULT men on the phone or on the
computer. One day when they were at school, he disconnected the
wiring to their bedroom phones at the junction box and removed the
doors to their respective bedrooms. Problem solved. :)

It's certainly different. I didn't know that they made such a thing. Please post the results of your findings.

Too late to solve this guys problems. Seems he raised a daughter that
doesn't respect him. Then again what is there to respect in a parent that
have any respect for his kids. OTOH, children are just a product of their
parents. The guy raised a daughter in the image of himself. To bad.

www.freqofnature.com is a good site for Los Angeles.

For San Diego, I recommend

http://members.home.net/scannersandiego/
http://www.qsl.net/kf6vnz/

Also be sure to check www.trunkedradio.net for information on trunked radio systems in SoCal.

I recall some great discussions on this group over the last two year U
remember the Famous software DVP buster , then we had Eric SMITH Motorola.

well I say it again Scanning is a dead hobby the government knows it cant
outlaw them so they simply increase their budgets to allow Police and other
groups to get richer , and not have to put up with any one eaves dropping
on them at all . it so what a call win win loose situation ,

They win Privacy I win big contracts and you fuckwits loose , mmmmmmm
rock on the super scanner it want happen wankers,.

stay tuned for the predicted response and showing of incredible
intelligence.

STAY AWAY FROM 2.4MHz Panasonics. I bought their top of the line and exchanged it four times. It just doesn't work. Short range, noises and it heats up in two minutes. The anwering mashine part of it is great. The phone sucks! I made the mistake of throwing the box away so no return, only exchange. I have three friends who have the same phone and the same problems. My $20 900MHz Uniden goes a block away and no problems. The Panasonic goes 5' and the problems start. The phone gets very hot on the ear to the point that I can't use it. Then all these noises start everytime. Good Luck!

The Panasonic ones use a 900MHz link, get the Uniden one

<applseed@nemonet.com> wrote in message
news:r8fsitolb528tuor0rsla6ccbt0i2nj2oa@4ax.com...
Hi guys....

I need a new cordless phone for home use.... one that has an
integrated phone answering machine too.

What abt those Panasonic models.... the 2.4 Extreme series

http://www.prodcat.panasonic.com/shop/listmodels.asp?categoryid=1969

If not them... what abt the Uniden "Tru" series.... again
2.4 gig

If I may explain while he is catching his breath. FRS radios are made so as to resist any modifications. Notice a difference between FRS and CB or Ham antennas? The FRS is not removable. This is so you cannot hook it up to a signal amplifier or other device. I use FRS radios, and have a question for you. Why? Don't they serve their purpose? Lisence-free, 14 channels, relatively inexpensive. Want more? Get a Ham lisence.

This has come up before. They really don't like scanners there. There have been numerous stories on here about people being asked to leave when found with a scanner. The security there is very tight and over 90% of it is plainclothes people and cameras. I remember seeing a sign with a list of things they don't want you to have. I am sure a scanner was one of them.

Before you Civil Libertarians lather up, remember that Walt Disney World is PRIVATE PROPERTY. They make the rules and you follow them. They take this real seriously.

England...

The bottom line apparently, after discussion with the police, is that as along as there are no 'sensitive' frequencies in memory you are OK. As for the scanners that have a password protected memory area - no good, they can get passed that. Best bet is to locate the factory reset button and use that if 'questioned'.

Don't expect much from 800-950 though. Nearly all our mobile telephony is digital now.

Have fun...

A lot of the traffic is on one or two 800MHz SMR trunked systems.
Cellular is apparently also a cost-effective way of conducting business,
and was fun to monitor, as occasionally was the VHF Marine Band &
VHF/UHF counternarcotics frequencies (which no, I'm not sharing).

Actually the patent on the coding is public, and not propietry. So no
one has ot pay anyone for the patent. It is like this so that many
companies can make radios for public agencies to use. The idea of this
digital standard is for public saftey. Making the patent public makes
it much chepaer and affordable for government agencies to addpot its
use.
And to the idiot who thinks scanning is dead, little does he realise
is that there are people around already who are listening to digital
transmissions, on not only the police, but other government users who
use APCO25 astro. If he htinks scanning is dead, he is only kidding
himself, but looking at the degree o fthe posting he sent out, a moron
like this would have a closed mind on the subject.
He is like the idiots who once said man would never fly, or go to the
moon. Pull your head in.

Please excuse the newbie question from a newbie user..

I'm getting a "base/mobile" scanner (RS PRO-2066) which has a BNC on the back (not top) of the unit. I also have a whip antenna (RS 20-006) with a BNC. So how do I make the right-angle connection to get the antenna oriented vertically? Can I just use a regular 50-Ohm thinnet T-connector? If so, would I install a terminator on the other side?

Thanks for any help.

pick it up.

I have AT&T phones that operate at 2.4ghz with frequency hopping digital
spread spectrum.

I'm safe from the average person listening on my boring conversations.

Frank,

Go to your local Radio Shack tell them you need a right angle BNC
connector see
the following. The tee will work but I think this would be a better
choice.

Watch out. Several folks on this news group have reported the ability
to monitor these phones despite the "spread spectrum" label.

Whether this is due to radiation from inside the unit, or whether this
is because only one direction is spread spectrum (!) I don't know.

Also Beware of the fact that 2.4 GHz is NO better than 900 MHz spread
spectrum and it may suffer from interference from the likes of your
microwave oven where a 900 MHz model may not.

No. FRS radios use surface mounted components. There are no variable capacitors or resistors to tweak.

AT&T phones are good. I got a pair of 2.4 Ghz at COSTCO and am very happy with range, voice quality, build and price. I have been unable to hear anything using AOR-8000 or even pickup a frequency "hit" using Optoelectronicts Scout so they seem to be using a true 2.4 Ghz frequencies.

Hello folks. My name is Scott Shade. My ham call sign is kb9dlz. I have a few questions if someone can help me out. One, I'm living in a rural area, and want to get a vary accurate list of frequencies for this area. Its for pittsfield, Illinois, and I need everthing for all fire ambulance and paramedic services as well as all police and civil defense and air frequencies. Also, I have a scanner but, Its about six years old and I know that There's been a lot of advances made in scanners since then. Is there a website I can go to to learn more about the latest scanning technology available. My scanner just covers from 29.00 to 512.00 and covers the air craft band from 118.0 to 136.0.
Can someone bring me up to speed on the latest developements please, I'd really appreciate it.
Thanks a lot,
Scott.

>with a scanner.

I have read all the Disney literature regarding that which is not allowed.
Nowhere are scanners on the list of prohibited items. Therefore, I have
exercised my right to bring said scanners onto the premises. I have monitored
their communications on several occasions and will continue to do so. Since I
use headphones at all times, my scanning does not affect other guests. I
operate discretly and bother no one.

If a representative of Disney attempts to confiscate my scanner or have me
removed from the park, they had better be prepared for a lawsuit.

The Panasonic phones that operate at 2.4 ghz and 900 mhz are sold
as digital spread spectrum. The 2.4 ghz may be spread spectrum but
the 900 mhz is out in the clear. VERY deceptive advertising.

762. Audio Output/Lights

Newsgroup: rec.radio.scanner
Date: 2001-06-19 21:39:03 UTC
From: SJP <spell189@excite.com>
Message-ID: <tivhg89jp11125@corp.supernews.com>
Source record: 63979

I have approximately 4 scanners that I have hooked up to an old mixer and amplifier so that the audio is fed through some decent speakers. I realize it is not the ideal setup but it works.

I was wondering... (Excuse my use of electronics terms)

Would it be possible to power a small LED light with the "voltage" that is coming out of the audio output jack of a scanner? I am referring to the headphone jack since my handhelds dont have tape out jacks. I would like to have the scanner that is currently sending out audio light a small LED so I know which of the scanners is sending the audio.

Does anyone have a good web page that explains the differences between LINE / MIC / and Headphone jacks? (i.e. can you plug a headphone out jack into a MIC in jack on a mixer without causing problems?)

Any info appreciated,
Steve

Don't sweat it DeWayne. There are some cry babies in these newsgroups that tried to drive people out, that were posting Ebay Auction items. When that didn't work, they started reporting people to their ISP's, even when posting "for sale" items!

Truth of the matter, @Home doesn't know what the Hell is going on in their own company, let alone what's right, wrong, or acceptable in the UseNet newsgroups. It's a canned boiler-plate warning notice that serves no purpose. They're too lazy, and inexperienced to figure out what's really going on.

What do you think is more important to @Home, a $480.00/year paying customer, or a newsgroup cry baby?

A friend back in Lexington sent me a URL for a "new" control program for the Icom PCR1000. I say new, because none of us (the former central Ky SWLers club) knew about it. One of the guys knows someone who mentioned it in passing. A network engineer passed the URL on to him.
http://www.arachnoid.com/icomcontrol/index.html
A simple program that supports the DSP/IF Shift, and has 400 channels.
The frequency up/down is via the mouse buttons, and while different works "real nice".
There are several other interesting programs at this site.
I have had the PCR1000 program up and running for about 12 hours.
While it is a rather plain program, it does not hog all the resources needed by some programs.
Check it out and post your thoughts.
I have nothing to do with "arachnoid.com". This is just a nice, free program.

>
>Would it be possible to power a small LED light with the "voltage" that is
>coming out of the audio output jack of a scanner?

Highly unlikely there will be enough signal to do it, given that an
LED drops 600 mV (.6 volts) across it. A typical HP output on a small
device is in the 200-300 mW range, with a load impedence of 8-45 Ohms.

> I would like to
>have the scanner that is currently sending out audio light a small LED so I
>know which of the scanners is sending the audio.

It could be done, but you'd have to provide some additional
amplification.
>
>Does anyone have a good web page that explains the differences between LINE
>/ MIC / and Headphone jacks? (i.e. can you plug a headphone out jack into a
>MIC in jack on a mixer without causing problems?)
>
In a nutshell...

A line input is a high impedence (generally 60-100 kOhms) input that
is expecting a signal level in the 250 mV - 10 Volt range. It is
typically unbalanced.

A mic input is a low-impedence input (usually 600 Ohms) looking for a
signal level in the 10-300 mV range. It is typically balanced (in
pro-grade gear...consumer grade is often unbalanced).

A headphone jack is an output, which is amplified typically to
somewhere around 200-500 mW per channel (if stereo) into an 8 - 45 Ohm
load.

As to the connection question, if you Must send HP out to another
device, you're much better off going into a line input. A mic input
will be easily over-driven (clipped) by a signal such as this.

Further study can be had at www.rane.com

776. Where to get Uniden MR8100 Repaired?

Newsgroup: rec.radio.scanner
Date: 2001-06-20 02:40:23 UTC
From: dirty_harry74@nospam.hotmail.com
Message-ID: <3b300c0e.2681469@news.microflash.com>
Source record: 63993

Uniden will no longer repair this unit.

Looking for a repair depot in Canada or the U.S. (preferably Canada).

I found a burnt resistor on the RF board and there seems to be a short in the 3M03AN ic as it gets very hot. Unfortunately the chip is surface mounted. Has anyone attempted to do a similar repair on the MR8100? Is the 3M03AN chip readily available? It appears to be made by Sharp.

Thanks in advance for your help.!

Harry

Forsale:

GE ERICSSON Mobile radio

model: MVS NPH 20

FCC id: AXA9MZ -MVSH3B

30watts of power
has scan function.
I am not sure how many channels this radio can hold.
there is two in there now. and the scan works.

this radio is a 10/10
comes with mounting bracket, DC powerharness and microphone.
this is a solid radio.

99.00US includes shipping and insurance.

thanks

I've got these frequencies programmed into the ol' scanner here:

(Illinois State Police District 16)

42.4400 (Base)
42.4700 (Mobile)
155.5200 (HF)

Now many times I weill hear just one end of a conversation - usually
on the Base side, but sometimes on Mobile. I've tried flipping between
them to see if I can hear something on the other freq, but dont

The only thing I can think of is that maybe I'm hearing the signals
from the big tower at the station, and the radios in the cars aren't
strong enough to reach me?

Sounds possible, but unlikely, since the cars must trasmit a strong enough
signal to reach the base antenna fron the perimiter of the district or farther.
Are you sure you have ALL the frequencies used? Police around here have more
than one channel they can use.

BTW, where in IL are you?> I was born in Elmhurst, IL

My Cobra PR1000 (GMRS) checks ~2W on all 15 channels when on the high power setting and ~0.5 on low power. Although at these frequencies the extra power makes very little difference in range. Terrain effects range much more than power. As someone had pointed out earlier only seven of the channels are shared with the FRS radios.

Bill,
Thanks for the reply, I appreciate your response. I made some inquiries here, and it retails for Aus$ 249.00, a bit steep, but I paid Aus$2500 for the receiver, so I guess it's peanuts by comparison, just have to save up again I guess.
Thanks
Mal

I use a Uniden 900MHz Digital Spread Spectrum model. You cannot monitor the transmissions in the 928mhz band with a scanner. It is reported that you can monitor DSS phones using another similar phone by switching the base unit off and then trying to make a call with the handset. The handset then auto-scans for one of 15 channels transmitted by the base unit. If your neighbour happens to have a similar phone, the hand set will lock on to its frequency and you supposedly will be able to listen in. BUT!! although you may end up on the same frequency as your neighbour, there are a possible 16,000,000 spreading codes which are applied to the signal which need to be compatible with your phone for you to hear the conversation...a likely senario!. 900MHz Digital Spread Spectrum is the way to go.

On the FRS-compatible channels, the radio will automatically go down to 500
mW to be FRS rules-compliant.

Does anyone know the model of the HH Radios that are used at Universal IOA? I have monitored thier 900 mhz system and the communication dissappears when they change to channels 4 or 5. I was wondering if the radios they use have a radio to radio talkaround channel or if they may be using a conventional 400mhz channel. The model radio will tell me what freqs to look for.

Thank you.
Kevin

Unless your antenna is as high as the base station you may not hear the
mobile units unless they are within a mile or two of your location.

You will have to get a mobile mounting brkt that is appx the same style as the base antenna mount shown at the bottom of that page. I didn't look, but they probably have them on their site somewhere. There is a link at the bottom of their page for questions...why not ask them?

Judging from what I hear on the scanner, I would guess that less than 5% of GMRS users are licensed. These radios are clearly being marketed as FRS radios with little or no mention of licensing requirements.

I use a Sanyo DSSS digital phone. I like it. It's relatively secure.
Also see the AT&T version. I suspect they use the same chip sets or
even RF modules.

>>Also Beware of the fact that 2.4 GHz is NO better than 900 MHz spread

Features like what?

>I really do NOT like the idea of having a 2.4 gig xmitter up
>near my brain tho! <G>

It's hardly any worse than 900 MHz from a physics point of view.

From a practical perspective, 900 MHz will penetrate somewhat better
and you don't need to worry about microwave oven interference, though
other 900 MHz gadgets may cause you a bit of grief.

ISP District 16 Rockford uses:

42.44 Base / 42.70 Mobile - Split frequency duplex,
You'll only hear the base on the base freq and the mobile on the freq, when in range (a few miles) (dont use a delay on these freqs). I can often hear the 42.44 Base here in Chicago.

155.520 is Base/Mobile simplex, you'll hear both sides, but only when the mobile is within range (a few miles).

42.47 is not an allocated frequency

Also try:
155.475 ISPERN
155.460 ISP HF4
42.50 ISP LF2
155.505 ISP Mobile Extenders (relays handheld to car) (low pwr)
155.055 IREACH

811. Data packets on aircraft unicom freqs?

Newsgroup: rec.radio.scanner
Date: 2001-06-20 17:36:05 UTC
From: Bill Jones <wejones@megalink.net>
Message-ID: <3B30DF05.3F2F8971@megalink.net>
Source record: 63928

I've been listening recently to planes talking to and around some small local airports (ie airports that don't have controllers, but have a unicom freq that the planes talk on to tell each other where they are. Curiously, occasionally I hear data packets that sound like regular 1200 baud amateur radio packets. The packets aren't frequent enough for me to have been able to see if I can decode them with an amateur radio TNC yet, although I did get a possible decoding of one packet, and it looked like a series of numbers. I intend to keep trying to decode these things when I get a better antenna, but in the meantime, I was curious whether anyone knew what these data packets might be?? I have talked to pilots who don't know what these transmissions might be, but I have heard about some experimental system where aircraft with GPS navigation systems can talk to each other, telling each other about where they are, which I assume would be by radio, so I was wondering whether the packets I heard might be from this experimental system? And before someone suggests it, these packets do NOT sound like the ACARS data bursts, which seem to be at a significantly higher data rate, not to mention the fact that they are supposed to be on different frequencies (although I have been wondering whether they might have switched freq, since I seem to be hearing less of them than I did a couple years ago). These data packets SOUND just like HAM radio packets.
Anyone know what they are???

As some may be aware that in the past weeks the PB Scanner Pages hosted on Expage were removed for a short time due to an unfortunate misunderstanding. It appears that there were objections to our providing the URL's to our Pages when asked and as a courtesy to new and old users alike.

At present the cited Pages remain on Expage for reference, but due to a caveat issued by Expage, we are unable to provide those URL's and have those same pages remain.

Currently we are hosted at CompuServe under the following URL:
http://ourworld.cs.com/pbscanner

We will continue to update this Site and maintain active participation in the Newsgroups.

Thank you all who wrote us and Expage to have the Pages restored, we sincerely appreciate the efforts and support given during this time.

Please stop by and see our work in continual progress.

Best regards,
PB Scanner
(Jon)

I checked that website that one of your replies had listed (the one from
Larry Levy)
and it is showing Motorola Saber radios. The bad news is if the net is
fully digital
(which means they are using "vocoder boards" for scrabling their signal) you
will not
be able to listen at all.

There are no scanners at the moment that can track the Astro (apco 25
standard). If the Network
is not full digital (which means it is a hybrid system using a combination
of digital and Motorola trunk type II radios) then you might be able to
listen to the type II with a trunktracker scanner. You must have the freq's
in order, talkgroups id's and fleet maps to do that.

It is not much but it is all I can tell you!

go to

http://www.trunkedradio.net/

for more info, then click on "Digital/Apco25" for more info.

Hope it helps!

Ed

Other than IMD, no, I have no idea what it might be. Even if it were
ACARS, it wouldn't be on that frequency.

If you're thinking it might be that ADS-B stuff (I'm pulling this
stuff from memory), it's possible, but I really wonder if putting that
stuff on Unicom channels is smart.

The Icom R-3 will only Scan Video Signals in the TV Bands, you will need the
actual Video Signal Frequency outside TV Ranges.

Have to say that is one point I missed when I first got the R3, but a fine unit
none the less.

From what I have seen in the past, the Military is in the low bands: 30-50 MHz

Business Frequencies should be on par with US Standards: 151 to 158 MHz
460 to 467 MHz.

Not much ever found Online regarding this Nations frequency uses, though the
Message Board at: http://www.strongsignals.net/ may provide further.

Hope this helps,

Well, this is NOT like a rubber duckie, , ,
This is a mobile or external antenna that uses a coax cable to connect to the radio. Look down the page to the line drawing of the details of the antenna. These antennas are several feet long, and when used as an external antenna for a base radio, require a ground plane to work against. If you need to change the PL-256 connector to BNC, then just go to Radio Shack and get an adaptor.

>
>Anyone with a list of frequencies for the park?
>

Disney is on a Trunked System, well documented in Police Call from Radio Shack.

From Page: 411 , 2001 Edition

851.3125, 851.8875, 852.2375, 852.3625, 852.4125, 852.7375, 852.8125, 852.9625, 853.4625, and about 20 others

A Trunking Scanner is best but an 800MHz able unit will do on the fly.

I have been to Disney with my Scanners and never had a problem, on two different trips I talked with Uniformed Security and chatted about the new System and if they Monitor FRS (Family Radio Service) which they both replied YES, on Base Scanners and that they like the new Trunked System for added "privacy" and for the Talkgroups.

IMO, if you act aloof in the Park, regardless of Scanner or not; they will boot ya, maintain the Hobby and act accordingly in your activities.

Most people just do not understand Scanners and the Hobby in general, a friendly attitude will go miles to help others understand.

There are at least TWO types of PRO-2020's, , , ,
The one I am familiar with (perhaps you also) was built in the 1970's
and was one of the first non crystal scanners. It was a great radio,
but today only worth about 20 bucks at a garage sale (or ebay) and is
not the one in the pictures at the links below.

>Are there any mods to kick up the transmitting power on these radios?
>

Simply stated, NO.

The nature of FRS Radios, Frequencies Used and Output Power would make any mods of this nature useless.

There are Licenses for $85.00 via the FCC for GMRS (General Mobile Radio Service) that permit much greater output power, range and better equipment: Base, Mobile and Handheld as well as repeaters. GMRS shares some of the same Frequencies with FRS and will permit cross-talk.

GMRS Licenses are good for 5 years and entitle the whole related family to use the Service.

Look into other services such as MURS, Ham, and CB for better range if it is required.

Yep, fully digitized. :(

In the last month or two, they started transmitting digital signals on
their previously little used frequencies between 484-485 Mhz, while
also using the old "Rover channels on 506-507 Mhz. Now, those are
silent and everything, aside from the old Tac 1 (154.83-which
simulcasts "hotshot" dispatches citywide) is on 484 megs.

I sure would like to see this "other" Pro-2020.
If it's as old as you say I would gladly pay $55 for it.
In the mean time I'll stick to what I said below.
It's worth exactly what a person will pay for it!

I've seen people pay $1000's for a stars signature that I wouldn't give $2
for.

As others have said on this subject. 2.4GHz is a very high frequency, the short wavelength makes it more susceptible to multipathing, reflection, blocking by objects and if it is ever proven, more detrimental to your health. If your home is fairly open I think 2.4GHz should be fine, but if you need to use the phone through many walls or in the basement, you may have reception problems.

I did the discriminator mod using the extra connection on the CIV port, but have a new problem.....

Has anyone else performed the mod and used this spare connection on the CIV port? The reason I ask is because after I performed the mod, I can no longer use the CLONE port or the CIV port for programming my R10....

Just thought I'd drop a line to see if it was just me, or if anyone else has seen this!

Thanks,
Scott

I believe the post by "PB Scanner" is correct with the trunked frequencies. I was just in Orlando this winter and carried my 245 Trunktracker every day I was in the park. Never had a problem, never a question asked. (Of course I have that SS look about me so maybe the Magic Kingdom Gestapo types eluded to in this thread thought I was one of them.) Lots of activity to listen to. FRS freqs are jammed with people using the stupid musical tone buttons, but a few interesting conversations heard there also. If you use FRS, CTCSS is a must!

Happy Scanning!

846. Los Angeles TV Media Leaving 450 MHz? (Retry)

Newsgroup: rec.radio.scanner
Date: 2001-06-21 08:14:31 UTC
From: "Public <Anonymous_Account>" <remailer@xganon.com>
Message-ID: <3c8685598a2921a24cdf4Be31ce142bd@anon.xg.nu>
Source record: 63813

Are television news media outlets generally moving their remote pickups
and other two-way communications away from the 450 MHz band these days?
I'm referring to the sort with the station's production control room
talking to reporters and camera crews in the field, with station audio
in the background when no one is speaking (IFB).

There has been a police stand-off underway since 4 PM PST today on the
interstate 10 freeway in Los Angeles county. At about 7 PM, I met with
friends for chow at a burger stand within a mile or two of the incident.
One of the patrons there had a scanner tuned to KCAL-9's radio traffic,
which intrigued me because KCAL was one of several stations whose active
media frequencies I'd never before successfully located. In short, it
turned out that the radio's "monitor" bank had been programmed with a
handful of cellular frequencies in the range of 889-893 MHz. My notes:

KCBS-2 -- 889.7700 (IFB + engineering comms audio)
KNBC-4 -- 889.1400 (IFB audio only)
KNBC-4 -- 893.8800 (IFB audio + engineering comms audio)
KCAL-9 -- 892.2900 (IFB audio + engineering comms audio)
KCAL-9 -- 891.9900 (IFB audio + engineering comms audio)
KCOP-13-- 893.2500 (IFB audio + engineering comms audio)

Is this a new trend, or have I been overlooking this for a long time? I
don't think, in retrospect, that I've ever heard *any* of those stations
on the 450 MHz band. The only ones that seem to have active and strong
communications there are KTLA-5 and KTTV-11.

This message did not originate from the Sender address above.

If you're familiar with APRS, think of ADS-B as a version of APRS on
steroids. I've heard it was under development in areas where TRACON
coverage is poor (such as Alaskan airfields in mountainous regions).
I do not know what frequencies they use or whether it's being tested
anywhere else.

And the obvious question is why would you want to? If you were
interested in Video links, you might want to go as high as 2.6 GHz,
but beyond that you'd need some specialized gear.

Of course you could try scanning the 4 GHz down link band from the
major satellites, but it seems their coverage stops before it gets
that high.

Also be aware that most microwave stuff runs on a tight, narrow beam.
You'd have to be somewhere near that beam to get a clean enough signal
to make it worth decoding. Wide band signals tend to get pretty
messed up when hit with multipath distortion.

Furthermore, most stuff on those bands are digital now. You'd need to
know something about the format of the modulation before you could
decode it. Oh, and I didn't see even a rudimentary In-phase and
Quadrature output from this unit. You'd need that too.

Personally, I'd by an Icom R-3 if I were in to that sort of thing.

As other people have said, you need to be in the signal path to even start to receive a signal from the microwave system. Next, they all use some form of multiplexing on the audio. In other words, multi audio channels. To decode these, you need some type of channel bank decoding unit. Normally it takes a T1 data stream and makes it into 24 voice channels.

Good luck on your efforts.

Jim

I'll try this here once more before it's off to eBay!

I am selling a STRIDSBERG MCA804 Receiver Multicoupler. This is the 800 Mhz version with a pre-amp providing 16 dB gain. Brand new in box, never used. This unit has one BNC input and FOUR (4) BNC outputs. This is professional grade equipment for use with multiple 800 Mhz receivers.

$100.00 plus $5.00 bucks shipping via USPS Priority Mail, insured. USA sales only, please. No Trades, No C.O.D.

I will accept a US Postal Money Order, PAYPAL, or BILLPOINT.
I will also take a personal check, but will wait until it clears before shipping.

My eBay user name is OFFDAN for you to check feedback.

If interested, please e-mail.

Bergum wrote:

> Anyone know how to make a simple Squelch?

Diode, cap, comparitor, diode.

Charge-pump style circuit driven from the IF, or depending on the demodulator, the RSSI signal or AGC. A comparitor which may be as simple as a 741 IC or as complex as a few transistor differential amp, use the squelch pot to adjust the threshold level, the other input will be the output of the charge pump. The output of the comparitor goes to a diode (or other) switch that cuts the audio output of the demodulator from the AF amp stage.

Grand total of about 5 parts, build dead-bug style and hack into receiver at the two integration points. Dead simple, should take about 30 minutes to do.

Being old does not mean bad technology
A R-390 (45 year old technology) will out perform most modern day sets.
If you dont need trunking, or wish to listen to boring cell phone calls any
old scanner is fine.
I have an old Bearcat III that sounds great compared to most modern day
gronky sounding Aisin junk.

I wouldn't bother trying to modify it. I own one and you can pick up images at twice the IF (10.7 X 2, or 21.4 MHZ). The cellular frequencies may be blocked, but I pick up images from around 894-920 MHZ on the scanner.

Of course, listening to cellular frequencies is illegal. But I can't help it if I pick up images of these signals, even when I don't want to. I even hear them in the 460 MHZ range when driving by a cellular transmitter. How come our wonderful congress didn't protect ourselves from that?

No such Animal is available to the average Bear.

There are different Digital Systems so I doubt that any one Scanner would work
all of them.

I am sure the NSA, MI-5 and other Agencies have the ability but I doubt that it
is Handheld and within reach of any of us for the next few years.

There is talk of some projects to make an add-on board but this is subject to
FCC Type Approval and development issues yet to be worked out.

Agreed. But being old does not automatically make it better, either.
For a little more money, you can get a base scanner which is smaller,
covers more bands, and has more channels. And doesn't have 15 years
of use on it. Electronics does wear out.

Try the following Sites for Frequencies: http://www.cityfreq.com
http://www.bearcat1.com/free.htm
http://www.911scanner.8m.com/
http://www.airnavsystems.com/
http://www.trunkscanner.com/

Also the 2001 Edition of Police Call, available at Radio Shack will get you
going.

Also, I have a scanner but, Its about six years old and I know
>that There's been a lot of advances made in scanners since then. Is there a
>website I can go to to learn more about the latest scanning technology
>available.

See http://www.strongsignals.net/
They feature News and Reviews of New Scanners as well as give good 411 on older
Scanners and Technology.

My scanner just covers from 29.00 to 512.00 and covers the air
>craft band from 118.0 to 136.0.
>Can someone bring me up to speed on the latest developements please, I'd
>really appreciate it.

Lately there has been a trend by Public Safety to move to Digital Systems and
800 MHz Trunked Systems, the Trunked can be Monitored with a Trunk Tracker
Scanner, several are available. Digital is out of reach for the time being and
most likely for a few years to come.

Technology has also brought us Winradio, a Scanner that is more of a Computer,
the Icom R3 Video Scanner (TV/Video Display) the Alinco DJ-X2 Smallest Scanner
ever, and some other neat units.

For the most part you will find that not that much has changed, though Digital
and Trunking is making a slow move in.

Hope this gets you back into the Hobby,

Although it is not often that a Scanner is nailed by Customs it does happen.

Use your best judgement when ordering a Scanner from overseas, more than just risk of confiscation comes up.

I know that http://www.radioworld.ca/ will ship to the USA, note that the prices posted on the Main Pages are in Canadian Dollars, there is another section of the Site that features Final US Ship Prices in US$.

Remember the Customs Motto:
A Career Smuggler has to be lucky every time, Customs only has to be lucky once.

England: Legal to own and use but only on Public Frequencies: TV, Radio, Ham and what you are entitled to Monitor, Police Scanning is a No No. See the cited Page at the end to read up on this.

France: Scanners are reported to be illegal and Ham Radios are not favored.

Austria: Permit needed to import and another to own, but this does not permit use; also Tourists are NOT exempt from this.

See the following Site:
http://www.strongsignals.net/htm/laws.htm

Also for US Scanner Laws:
http://www.afn.org/~afn09444/scanlaws/

You should understand that outside the USA someone with a Wide Band Communications Receiver may be seen as a Spy.

Just be careful in your activities, possibly leave the Scanner at home and bring a Short Wave Radio; see:
http://www.spynumbers.com/
(Go figure)

Have a safe trip,

>his entire web site. I figure if 1000 people do this his bill will go up
>another $1000 this month.

Now why would you want to do this to someone who has been an obvious help to the Scanner Hobby.

I read his post and understand how difficult maintaining a Current and Helpful Site can be, I was forced off a Free Host and had to re-write everything on Compuserve.

I do this not for money or fame, just to be a help to old and new Hobby Scanners alike.

I wonder if you have produced any meaningful content as related to Scanning?

IMO: I would pay to use Strong Signals!

>

OK, thanks. Yes, I've used APRS. And what you describe sounds like the "experimental system" that I had mentioned, which I think was called "Capstone", but I didn't know much more about it than the name. That would be very interesting if what I was hearing was something like that. It was heard in an appropriate place for something like that, ie in a relatively mountanous area where planes can't be followed on radar.

Thanks for the info.

Importing a Scanner is fine provided it does not cover the US Cellular Bands:
824-894MHz

Having a radio on Police Frequencies is one thing but keying the mic is
another, you must be Licensed or authorized to use any given Frequency.

As for the Ham License, you can take the Tec. No Code Exam and be on the air in
days,
rather simple test and given you are an experienced ham then this should not be
a problem for you.

The question about 790,
790 MHz is the TV Ch. 67 Frequency here in the USA.

Visit the following Sites for further on Ham here in the US:
http://www.arrl.org/
http://www.qrz.com/

Hope this helps,

Welcome to the World of Scanners,

For a great intorduction to Scanning, see:
http://www.strongsignals.net/

A copy of Police Call which is available at Radio Shack is a good start.

Reading the Newsgroups will help you as you learn more about the Lingo and
Technology.

Modifications for the Pro-25 are available here:
http://www.mods.dk/mods.php3?model=pro-25&radio=radio_shack

Before you do any Screwdriver Surgery on your Scanner; plug in Ham, Police,
Fire, Air and Business Frequencies to hear everything going on over the Air.

Hope this gets ya started,

Source record: 63858

If the date code on the back is older than Jan 94, or some Feb94<
Here is the rule:

Date of mfg code must not end in the letters "ID" or after. (ID=94),
except for OAID (Jan94). (On BC700A some "OBID" (Feb94) work)

If newer you cannot modify it.
The modification involves taking the radio completely apart and cutting
loose a part in the little circuit board that is vertically mounted in the
front display area. I don't have the procedure available, and all the mod
sites on the net seem to have been closed down. If I ever notice it I will
post it here, but the fact that you can run a search and not find it in this
newsgroup in the past indicates to me that someone has been removing posts
containing such mods from the archives.

Look for the show demonstration on 141.850 AM. If you have an FM only scanner you
can still listen on FM but it's distorted. Look for their maintenance folks on 413.025
with a PL of 146.2 and I like to keep 413 to say 413.7 or 414 MHZ in the search bank to
look for other T-bird maintenance freq's. On the day after the show look for T-bird flight
following clearance delivery (Flight Plain filing) on the normal base UHF freq.'s I also
check out the FRS 462. MHZ band at the shows they are very busy.
Have fun, Jim

It doesn't appear to be able to do repeater splits...

I'm not too familiar with GMRS, but is it limited to 15 channels? The Wal-Mart units are 15 channel. According to the package, there are 7 FRS and 8 GMRS channels. 38 sub-codes, output power of 1.5 or 1.8 watts (forget). Doesn't say on the package, anywhere obvious, that a license is required for it's operation... There is a notation on the back of the package about this, but it is in basic print, blends in with the rest of the gibberish, and can be easily overlooked (I almost didn't see it myself).

The unit is an Audiovox brand, and is hanging up right next to the Audiovox's straight FRS units. The packages look nearly identical. The front of the GMRS package boasts "Up to 5 mile range." Tell me that a normal customer, uneducated about radio, isn't going to pick up the "5 mile range" unit over the "2 mile range" one... The price difference isn't that significant for them not to consider it, especially since chances are they will not even realize they need a license to operate it, until it's home and out of the box... And that's if by chance they bother to read the instruction booklet, which most people don't..... Then again, who even knows if it's in the instruction booklet...

GMRS is going to be the next MURS here pretty soon, if they don't start labeling these things better...

898. ? AF aircraft freqs used on training flights?

Newsgroup: rec.radio.scanner
Date: 2001-06-22 14:36:35 UTC
From: Bill Jones <wejones@megalink.net>
Message-ID: <3B3357F3.36D0D07@megalink.net>
Source record: 63865

I live directly under a military training route (MTR), and several
times a week have F-16s, warthogs, F-15s, F-18s, etc flying directly
over the house. Mostly AF planes, but sometimes Navy. I have no idea
of where they are coming from, but I would really like to figure out
what frequency they are using, mainly to give me a little warning to go
outside and see them (ie they come over so low, just above tree height,
that by the time I hear them, I can barely get out of my chair before
they are gone). I have seen one freq on one of the scanner sites of
252.8, which is supposed to be a common tactical training frequency, but
I was wondering whether anyone can suggest any other freqs (or a general
area, since I have one of those scanners with a spectrum display that
will show activity in a 1 MHz band).
Or, is there any other way of detecting their approach, such as
detecting emissions from radar that they might have on board or
something? Those guys really fly low. Nothing like being buzzed by an
F-16 so close that you can see the pilot. It would be nice to monitor
them too.

Try the following Links:
http://www.panix.com/~clay/scanning/frequencies/states/nj/atlantic-city/ai
r.shtml

http://www.cybercomm.net/~slapshot/utemarks.html

http://www.geocities.com/ResearchTriangle/Lab/1145/military.htm

Just note that Communications are breif and you may not always have advanced
warning of the approach besides the noise.

Often the training will be on a set schedule, so once you have a feel for when
they are often in your area you should be set.

Hope the Links help,

No, it is not ILLEGAL to decode MDT in the US. It is sent unencrypted over the airwaves and is part and parcel of Public Service Transmissions (aka the police work for us, the taxpayers).

What is illegal is to make what you hear (or see in this case) on a scanner public.

In Bill Cheek's case he was unfairly prosecuted under the made-up legal process of vicarious liability. Someone in New York took one of his data slicer kits and then used it to decode MDT. The problem is that this person also posted several day's reception of MDT to a web site - which does violate the wording of the Federal Communications Act of 1939.

Some Judge in NY got a bug up his butt that somehow enabling technology is also illegal and issued an arrest warrant for Bill Cheek. The judge was and is wrong. A data slicer has many uses, and it's the person who uses it for good or bad who should be blamed... A data slicer is nothing but a bunch of components that can be bought for 9 bucks at Radio Shack...

This is akin to someone using a Camaro as a getaway car in a bank robbery and then holding the Chevy Dealer and General Motors responsible for the bank robbery. How about telephone scams where people use the phone to commit felonies? Do we arrest the executives of the phone company? Do we arrest the maker of the telephones involved? Why not? The crime could not be committed if the phones didn't exist. Same case where some cities tried to sue gun manufacturers for the resulting Gun violence. Sheesh!

The easiest way to decode MDT is to use WinMDT, as it requires no outboard hardware, other than a scanner with a baseband (discriminator) tap and the ability to receive in the 800 Mhz band. The decoding is done by a computer's soundcard.

So decode away. But don't blab what you see around town or post it to the internet (which is illegal). And don't do something stupid like show your mobile MDT decoder (in your car) to the local blue meanies (That's the police, for you kids out there).

73,

Sparky

Realistic Pro-34 200 Channel Scanner in excellent condition covering 30-54Mhz, 108-174Mhz, 380-512Mhz, 806-960Mhz. Includes duck antenna, custom made real hard leather professional case (a $100 value alone) that fits like a glove. It protects most of the radio while still allowing access to top controls and external DC power with unobstructed speaker audio. Owners manual, and factory service manual (not a copy, original) also included. This radio has been well cared for as the picture (http://photosbychris.home.att.net/pro34.jpg) illustrates providing years of excellent service. I purchased the radio new in the first year of production with never a need for service. The radio works as good as it looks, rarely used portable, mainly used to monitor the local public service bands and aircraft around the house in a non-smoker environment. I'll also load a fresh set of batteries so it's ready to go right out of the box, just program and play. This would make an excellent travel scanner for your summer vacation. Price is $250 shipping included, PayPal accepted.

Contact Chris at photosbychris@att.net

I agree, nothing finer than owning a totally unmodifiable set, a precision Chinese instrument, complete with the use of masking tape to insulate exposed connections. This is top notch. To hell with the age when the products were constructed with enough materials that you could actually carry them across the room without the chassis flexing. Yes, these old sets are a nuisance, they can actually be repaired, (not every function is accomplished by some gigantic Integrated Circuit, comprising 75% of the radio's functions). And the old sets had that annoying feature where you could plug the cord directly into the wall, depriving us of the ability to overburden the real-estate of our outlets with those decorative wall warts. How stupid those old engineers were.

Don't get me wrong, the new stuff can be packed with features, and even if initially complex, the features allow much usefulness. The reliability seems very high on much of the equipment, minimizing the need for repair.

But the old stuff still has class.

Agreed. People have been prosecuted for taping their children's phone
conversations. A man in Phoenix was arrested for domestic violence
for kicking in the locked door of a teenage child - who was engaged in
the felonious activity of smoking marijuana and was refusing to open
the door. I attended University in the State of Arizona, and police
routinely kick in doors in that state when they suspect a felony is in
progress on the other side...

Recently in my area, a couple lost their home, and their jobs,
because their two teenage son's were selling drugs that they had
stashed in the basement of the family house. The police deemed that
it was a criminal enterprise. The parent's claimed they had no
knowledge of the activity and passed lie detector tests to that
effect... But the home was still put up for auction.

One of my friends was having problems with his teenage daughters.
Mostly smoking and chatting with ADULT men on the phone or on the
computer. One day when they were at school, he disconnected the
wiring to their bedroom phones at the junction box and removed the
doors to their respective bedrooms. Problem solved. :)

Sad story. My two teenagers are dealing drugs and using my basement for
storage. Why should I know what my teenage kids are dealing drugs? Oh
course the parents claimed to have no knowledge whether they did or not.
THE PARENTS RAISED THESE TEEN DRUG DEALERS. Nobody else. Maybe, just
maybe some other parent will remove his head from his posterior and take
take responsibility for their spawn. WHO RAISED THESE DARLING TEEN
DEALERS? Let them pay for these worthless contributions to society they
raised.

You already posted that story and like I said, the guy didn't solve his problem. His daughters are the exact same people HE raised before he yanked the phone. He nor they have any respect for anyone at all. A totally dysfunctional family. The daughters will still smoke and like older men. Now they will find another way to smoke and find older men without father being bothered. Who raised these kids or IOW if he did his job as a parent years before he wouldn't have to deal with this stuff now. Wow!

Different scenario. That man used a belt on his teenage daugter after
she assualted a pregnant woman, I believe. The story I'm referring to
was a teenage boy and no VIOLENCE was directed toward him. The father
kicked in the door siezed the illegal drugs and flushed them...

>> I attended University in the State of Arizona, and police
>> routinely kick in doors in that state when they suspect a felony is in

Corruption of blood is condsidered unconstitutional in the US. It is
morally repugnant. Their mom was a public educator and recently
voted teacher of the year.

Gee, I seem to recall doing all sorts of things my parents didn't know
about - some of them not legal... My parents raised me knowing right
from wrong, but there is such thing as free will. And there are
people out there who are just plain bad.

I grew up with kids whose parent's set limits, strict discipline,
love, private Catholic schools, the whole nine-yards... and still
their kids ended up in prison or dead with a needle in their arm.

OTOH, I know kids from broken homes with awful selfish parents and
were victims of all sorts of abuse who have developed into wonderful
moral upright adults.

Contrary to popular belief there is no "recipe" for rasing children to
become well adjusted moral upright people. Like I said, people have
free will, including children.

>
>You already posted that story and like I said, the guy didn't solve his

>now. Wow!

Hmmm.... I've known this man for many years. Quite a moral fellow.
He and his wife are both teachers. Outstanding kids for the most
part. Honors students, active in the community, etc. It seems to me
most teenage kids push the boundaries and experiment. This is not
dysfunctional, it's normal. Where did you get your degree in
psychology? When did you ever examine this family in a group session
to determine this dysfunctionality? I find it odd that you can make
overbroad statements about people you don't even know.

I remember once seeing a teenage Amish girl wearing lipstick near
Wooster, Ohio, which is a huge act of rebellion in her community...
Is her family dysfunctional too?

The real point here is that the government has removed the parents right to control their children. The slightest claim of whacking a kid lands you in jail or pay exorbitant costs to defend yourself from prosecution court. This has empowered the kids and leaves the parents unable to control some headstrong kid. Sometimes you just can't talk people, large or small to see your way of thinking.

Our kids are taught(outside of home) to disrespect and defy authority of any kind be it government, school or even at home.

It's in vogue these days it seems.

Big government....isn't it great!

Amen Brother! Today's scanners are the throw away type. I have new ones but
still love the oldies.
Thank God I don't live in a town where I "have" to have a trunk tracker
(yet) just to hear my local police. Any old scanner will do the job.

Hang in there folks. There's been word that Uniden is planning a new scanner that is capable of picking up these digital signals... Orange County (at least 3/4s of it) is also digital, so many police frequencies in the 460 MHz range in that area is silent.

Yep, and those traits are learned in the first few years of life. Doesn't just come on all of a sudden.

...if you were to look into their early years you would find they were influenced by a consistently moral and honest person. I could give you many prime examples here in my home town. What you see of a family from the outside is RARELY reality.

> Contrary to popular belief there is no "recipe" for rasing children to
> become well adjusted moral upright people. Like I said, people have
> free will, including children.

There is a recipe and it has nothing to do with religion, limits or such. It has to do with consistent examples and honesty. Very few parents

actual say what they preach. The FIRST time you cross that line you are starting to lose your kids trust and respect.

> He and his wife are both teachers.

So what? They certainly don't seem to have any respect from their teens. Why would that be?

> Outstanding kids for the most part.

Except the smoking, attraction to older men and lack of respect for their parents. Who know's what else.

> Honors students, active in the community, etc.

Yes, so was Ted Bundy. Means nothing.

> It seems to me
> most teenage kids push the boundaries and experiment. This is not
> dysfunctional, it's normal.

...and kids that respect their parents will go to all extents to not step over the boundary. When they do they, because of the respect and care they have they certainly wouldn't force the issue to a point that doors are removed. That is what is normal.

> Where did you get your degree in
> psychology?

Would it matter?. Practical experience in the field is far more valuable. Having raised my own and one that we got as a teen that wasn't my own plus 11 years of dealing with young kids that weren't my own I have seen a lot of kids from "good families" that went bad. I also have a good feeling for what works and what doesn't.

> When did you ever examine this family in a group session
> to determine this dysfunctionality? I find it odd that you can make

> overbroad statements about people you don't even know.

When an adult removes a bedroom door to his teen age daughters room in the fashion you speak of it would be considered by most as dysfunctional. He has obviously lost control and the respect of his daughters if he had to go to these extremes. He doesn't have enough parental control to get them to behave by his standards without removing a door and ripping out wires? He has lost control and the respect of his kids, a long time ago. I could never imagine doing this with my own kids. Insane!

> I remember once seeing a teenage Amish girl wearing lipstick near
> Wooster, Ohio, which is a huge act of rebellion in her community...
> Is her family dysfunctional too?

If they removed the privacy of her bedroom door, yes I would think they have some major issues to deal with. And yes, many would consider family life in the Amish community as somewhat dysfunctional. Isn't that the end results of most religions? :-)

That is plain BS! You have been sucked in by the media to believe this to
be true. Call you local Social Services office and report a child abuse.
Go talk to those in the medical field about reporting child abuse. It
usually takes an act of God to get kids out of abusive homes. Your
scenario is the exception to the rule.

> This has empowered the kids and leaves the parents unable to control some

Source record: 63896

> If the date code on the back is older than Jan 94, or some Feb94<
> Here is the rule:> Date of mfg code must not end in the letters "ID" or after. (ID=94),> except for OAID (Jan94). (On BC700A some "OBID" (Feb94) work)> If newer you cannot modify it.
> The modification involves taking the radio completely apart and cutting> loose a part in the little circuit board that is vertically mounted in the> front display area.
STEPS:
1)remove battery and antenna
2)remove screws from case and seperate the two halves
(unplug the speaker)
3)remove the two faceplate screws (on bottom of face plate)
4)unplug the cables to tilt the faceplate forward
5)locate and remove the copper/plastic shield under the faceplate
6)locate and remove the chip resistor (labeled "472")
7)reassemble the radio
If you have any doubts, DO NOT PERFORM THIS MODIFICATION.
Hope this helps.....

Hi there,
I am interested to know if MDT datd is transmitted in New Zealand.

But..... I am soooo lazy to scan the airwaves and try any thing that sounds remotely like data, I was wondering if someone could record about 10 to 20 seconds of MDT transmission and email it to me at jburns@ibsgp.NOSPAM.com (remove nospam before sending)

It doesn't need to be high quality. I am not trying to decode it, I just want to hear what MDT data 'sounds' like so I can find it easier.

Regards

-John

Glenn,
You need to wakeup and smell the roses or coffee or something.

The world is not the neat orderly place that you must have grown up in. There are many kids who's parents have done a wonderful job of raising their kids yet once the kids are exposed to peer pressure etc. outside the home, in schools and elsewhere anything can happen to destroy all that loving up-bring those parents provided. Parents have little or no control over that. Granted, kids who are brought up in a good family environment have a better chance of surviving that pressure but many do or can not. That's life.... To blame only the parents in all these cases is totally wrong!

My solution to big government is smaller government.

With that, I will not respond any further to this discussion in this or any other newsgroup.

Bill:
I used to fly warthogs, and the airplane was capable of transmitting on UHF, VHF and FM frequencies. We used FM freqs to communicate intraflight, and there was a squadron plan to divide up the frequencies so that there was only one flight using a freq at a given time. I can't speak to what other aircraft are doing with their freq allocation plans, but the chances of successfully scanning them randomly is nil. To do this, I suggest the following:

Get an aeronautical chart (known as a sectional). If you have an airport in the vicinity, pay a visit there. There will most likely be a FBO (fixed base operator) that rents or operates aircraft and will have these charts for sale to pilots. This aero chart will depict the MTRs in Maine, and you just need to find your house and see which MTR flies overhead.. While you're at the airport, ask someone the toll free phone number of the closest flight service station. The military aircraft are required to check in with the FAA Flight Service Station before gettting on the route to fly it. So there is a record of which unit/callsign flew the route at a given time.

Try to find out which military unit "owns" the route you live underneath. The Flight Service Station should be able to tell you that info, and you can contact that unit scheduler to see exactly who is using the route the most.

If you know that, you cn probably find out their squadron discrete frequencies and set them up in your scanner.

If you have any problem, let me know. I have a lot of connections with the FAA and Air Force and I'd be glad to help out a fellow scanner.

regards
gregor

Hi all, I am in need of the manual with tune up procedure and schematic

for a old LAFAYETTE HA-600A shortwave / ham receiver. Even the Sams
photofact
would be great!! Readable copies would be OK also. Of course I would
pay for
the copies and shipping.
Please e-mail me direct at:

mrrusso@optonline.net

THANKS, Mark

Yes, as amatter of fact, , , I do. , . , . ,

I designed and built a squelch for an old superregen reciever back in 1963 that worked great, And it can be used with any kind of radio since it's all in the audio portion of the circuit. Basically, it a full wave bridge circuit with two legs using small 12 volt light bulbs, agains't a pair of 25 ohm pots. When the pots are adjusted to balnce the bridge and block sound, it is squelched, but when audio come in, it unbalances the bridge and passes the audio. IT works great. The key is that the impedance of the light bulbs vary with current flow, and when they get hot (lighted) the resistance is much lower than 25 ohms, and the bridge is unbalanced, passing the audio. Connect one leg of the bridge to the speaker, the other side to the audio out.

Yes, there are scanners that cover that frequency range. But, I would say that any or most phones that transmit in that range are employing both digital and spread spectrum as deterrents towards monitoring, making it completely hopeless. I think there were a couple of the 2.4ghz digital spread spectrum phones that sent a portion of their signal 900mhz analog, making monitoring possible.

This was a couple of years ago....logic would suggest that these units were replaced with updated models or re-engineered to correct this flaw. But, you never know. In any case, I think there is a Win Scan software based monitoring system that will top out at 4ghz.

I have the following scanners for sale, the first one that agrees to the price gets them.

1. Bearcat 300 - 50 channel programmable scanner with eleven pre-programmed services plus it has: count, time, search, priority, lockout and the list goes on and on. It was the top grade scanner when new. I had the receiver upgraded along with a new digital green display. It comes with the AC power cord, antenna and owners manual for $75.00 + s/h.

2. Regency MX-7000 - 20 channel programmable scanner with search, NFM-WFM-AM, clock, lockout, vfo, priority, etc.. This scanner does scan from 25 to 550 MHz, then from 800 to 1.2 GHz. There are no gaps in the 800 band, yes it does scan cellular. This scanner comes with AC and DC power cords, antenna and owners manual for $85.00 + s/h.

Take both for $150.00 + s/h.

Shipping is from zip code 16066

If your interested in these scanners email me at jmcr@nauticom.net

I just got back from watching a driving school at Kentucky Speedway. The school was called "Fast Track High Performance Driving School" I saw the pit guys and the tower guys talking via 2-way and tried to pick up the signal but was unable to do so. I scanned the Kentucky Speedway freqs but only heard maintenance. I did searchs on the FCC database and in the Police Call book but could not find this driving school. They are based in NC if anyone knows any freqs or links please post.

While I almost never watch TV, Friday I saw an ad for a silly cell/PCS phone safety device. A device which connects to Nokia phones (maybe others) and pwoers the phone through the cigerette lighter power port, and broadcasts the receive cell phone audio on 96.1 (maybe other freqs but that was the one they mentioned). It also has a microphone so it can be used hands free.The funny thing, to me at least, was the fact that it broadcasts a cell phone conversation over the standard FM BCB. While it is low power, I suspect it can be picked up on a nearby radio. So, does that make all of the FM BCB radios in the country cell phone monitoring devices?

I have used a RS diskcone for many years. I bought one the first year it was
offered. It is stainless, though maybe a tad too light for my prefferences,
but it does work and work as well as a wide band diskcone can be expected.

AOR AR8000 Wide-Range Receiver
Covers 500Khz-1900Mhz
AM/FM/WFM/USB/LSB/CW
1000 Memory Channels
computer-controllable
Pic:
http://members.theglobe.com/pccurtis/trs80/ar8000.jpg

Excellent condition. No mods done. This is the original model - you can modify the bandplan with software. Includes manual, charger/ac adapter, and leather case. I do not have a computer interface for it. I just put a brand-new keypad in it, since some of the numbers were starting to rub off. I will include the old keypad as well. I will also copy all of my favorite AR8000 software, utilities, mods, docs, etc. onto a CD.

Price $300 + shipping

Paul, KE8VI

> I could never imagine doing this with my own kids. Insane!

I removed my teenage daughter's door only once .. and that was for repeatedly slamming it when she was unhappy with some aspect or another of the way the home was being run. It was off for about 2 - 3 days after she recanted her anger and pledged never to do so again. it was obvious she menat it and I relented. The next time she entered her room and closed the door only to have it "caught by the wind" and close loudly she was right back out with the explanation "That wasn't my fault!" before any one could even complain of it having happened. Now, I mention this because I think removing the door can be an effective tool in stopping the relatively minor transgression of door slamming, but as a method to change other otherwise unrelated behavior it is a poor choice at best. The removal of privacy is a very destructive act in and of itself; and to do so as an emblem of distrust is really too much. Removing the phone (after telling her why it is being done)? Yeah, okay; that might be defensible. But humiliating the girl is a bit much. The cause of the problem runs deeper than an open or closed door. Her involvement with older men suggest poor self esteem and humiliating her by removing the symbol of privacy and so blatantly expressing distrust only aggravates an already bad situation.

Uh, not in most cases.

Most of the MDT systems out there now, although not all, are newer systems, that use DES encryption, not once, but twice. SCA and Cerulean, the biggest two companies, both use this, as do the other companies.

If it is encrypted, then it is illegal to monitor. Most are now encrypted.

Many states have now required it to be encrypted, such as Arkansas.

That has not been my experience. I know of plenty of police departments (and private enterprise) still using MDC4800. Sure, a lot of PD's have gone digital, especially in the large metropolitan areas, but even some of them are still using MDC4800 in certain areas or on a limited basis.

You state that MOST are now encrypted. Please tell me how you came to make this conclusion. How about listing the actual numbers of PD's using digital systems to those that still used MDC4800.

My local PD still uses MDC4800 as well as many others in this area. South Dakota, North Dakota, Minnesota, Wisconsin, Illinois, Iowa - MDC4800 and RDLAP are the norms.

I've heard plenty of claims by digital sales people that are not backed up by fact. You would think for the ads that most of the country is using digital cellular phones. I just saw a CTIA report (from March 2001) that shows that 80% of all cellular phone traffic is still carried on by AMPS (800 Mhz Analog) in the US.

Some city PD's that have gone to fancy digital systems are using them in analog mode (Like Phoenix).

Other agencies, like the FDNY and the city of Cicero, IL have had nothing but problems with the newer digital transceivers (Motorola MTX 3500's). The high cost and complexity of these products is not a good value for taxpayer dollars). The City of Cicero uses MTX HT's that cost $1700 EACH. FDNY paid about $3500 EACH for their HT's including rigging and airpack mic's. This doesn't include the cost of additional engineering and repeater sites required to make these systems work (which can run into the tens of millions of dollars).

And again, this does nothing to change the FACT that receiving MDT transmissions is not illegal. It is only illegal to use the information from those transmissions for criminal purposes or to make those transmissions public.

Using Optoelectronic's Optotracker, you can add trunk tracking to the
following wide-band receivers: ICOM R7000, R7100, R8500, R9000, R10, AOR
AR8000, and AR5000.

For more info, click here:

I am looking for a machine that will count the most active frequencies in the police (or HAM) band, and let me know what they are in order of most use.

If that's a frequency counter, how can I get one?? What type of companies/websites sell those??

Bill

A frequency counter does not do that. It is a device that will monitor a very wide spectrum of frequencies, and display a digital readout of a frequency currently being detected. It needs to be in close proximity to the signal source. Typically you would use a frequency counter to detect a given frequency from a device that has an unknown frequency.

Many of the scanner radios that work with PC software, have the ability to log the number of "hits" on channels/frequencies. The Undien BC9000-XLT is the only scanner I'm aware of, that can do this without software.

The ad I think is funny is the "internal antenna" ad I always see on late night TV. Basically it's a copper foil circuit printed on plastic that you place INSIDE the cell phone, preferably under the battery, and it instantly improves reception (yeah right). There's no way that this thing could improve reception at all. The ad claims that it "works like a 4 ft. antenna." However, I don't think the people selling these things realize that a 4 foot long antenna would give a cell phone a rather crappy signal. The ad also offers a "wave scrambler" which is a little metal mesh screen that you put over the earpiece of the phone and it supposedly protects your brain from RF. I guess they don't realize that the RF comes from the antenna, not the speaker. There's also a "testomonial" from a lady that the ad states is a licensed chiropractor who says she needs to be able to have a good cell phone connection so there aren't any mistakes on prescriptions. Chiropractors cannot write prescriptions.

I forget what they wanted for this miracle device, but I bet it was $19.95 plus $5.95 shipping & handling.

I have the exact same problem with my BC200XLT. It works but acts like there's no signal, and the squelch won't open. I remember reading a while back that it's the fault of a transistor, but I don't remember which one and I never got around to fixing it.

Just for some news of the weird, there are two type doctors in this country. I
am reffereing to docs that work on people. MDs or Doctors of Medicine, and
Doctors of Oestopathy. I think I am spelling it right. They are derived from
the same school of thought that Chiropractors come from, but are "honest to
goodness doctors. They have to pass the same state medical board tests.

And can write prescriptions. Back when I was in the hospitcal to have my leaking apendix removed, one of the internds was a DO or OD. I asked our daughter in law, a "real" MD, and she said that while they are derived from Chiropractors, they are (for the most part) good doctors. I was more then a little amazed.

First off, I wanted to thank all those that have e-mailed me off the group. I've programmed in several freqs, and although the fighters haven't come back since I started monitoring, I have heard some interesting things, like re-fueling operations.

> To do this, I suggest the following:
>

> station. The military aircraft are required to check in with the FAA Flight
> Service Station before gettting on the route to fly it. So there is a record
> of which unit/callsign flew the route at a given time.

Thanks. I already have the sectional. I am under VR840,841,842. We found this out because my son, who is a private pilot, was going to take us up to take some pictures of our house, but our house got buzzed 3 times in 2 days before he took us up, so we were a little nervous about doing multiple circles right over a MTR. Before our flights, he did call into the Flight service station, and they told us to call Portland approach before going over the route, but they said that they usually only had a couple minutes warning before the route went active. I was hoping to find whatever freq was used by the air force to notify Portland approach, or would the fighters use the same freq that we were using?
BTW, we asked the instructor at the local airport we flew out of, and he said not to worry about it, that the fighters knew where we were, and while they might buzz us for fun, that they wouldn't hit us, but we were afraid, because doing circles we were afraid that we might confuse them. Now that my son is back home, I wanted to find out as much as I could about monitoring them via scanner.

> Try to find out which military unit "owns" the route you live underneath.
> The Flight Service Station should be able to tell you that info, and you can
> contact that unit scheduler to see exactly who is using the route the most.

Thanks. Next time my son visits, I'll have him ask that when he calls. Not being a pilot myself, I wouldn't want to bother them.

Thanks for the info.

Here is a real jammer for cell phones, Illegal as hell, but
interesting.

http://www3.sympatico.ca/ChanLiYen/Cordless/list.htm

and scroll dow to the DLW2000, which will, quote" jamming all
cellular phone signal. AMPS, ETACS, GSM900, DCS1800.
All specified cellular phone signal will be paralyze simultaneously.
Effective coverage area from 20~25 meters radius."

Of course, I do NOT reccommend these, but they are interesting.

For the record, Osteopathy is not derived from chiropractic.
Osteopathy is a field of study closely related to Medicine, but which
also includes manipulation as a form of treatment (physical
therapy?). Osteopaths, believe in, and prescribe, medications and
surgery. (I had an uncle by marriage who was one.)

Pennsylvania, for some reason, seems to have a high proportion of DOs,
many in the cardiac fields. New Jersey has practically none.

A search on the internet would probably reveal the true nature of the
field of study.

I have seen similar units on eBay. These operate on some of the HAM
allocated frequencies, and the ARRL (HAM lobbying group) is pushing the FCC
to enforce things and get em off the market.

Most of these products are made in China and are not Type Accepted by the FCC or other Sanctioning Bodies. The use of them in the US, Canada, Mexico, and most European Countries is probably not legal, as they transmit on frequencies allocated for other services that require a specific license. You probably can't even legally use them in their country of origin... :)

I am considering the purchase of the above radio.

Can anyone advise me what software is available to control this radio? Are demo versions available?

All I have seen is the RT Systems software (ADMS-3) for $40, but no indication of what it does or if there is a demo available.

Walt

Hi all,
I've just found this intersting website about radar detector
reviews and i guess it is the best so far....updated and fair. Atleast
we know that valentine one is not the only choice but you guys
decide...

http://www.speedzones.com/

Hope this is helpful...pass this on if it does.

I have been using the Scantenna for about 7 years,and have been
pleased with the results,but I live within about 2 miles of downtown
Atlanta.It's up about 25 feet.I have not done a side by side comparing
of the two antennas,but if you live in a downtown,or near downtown
area,either will probably work well.Height will make the real
difference in longer distance receiving situations.

MDC4800 decoder for Windows. Works with soundcard (excellently, BTW) or data slicer. Requires a scanner with baseband/discriminator tap. Computer with at least a pentium processor is recommended.

Most Police MDC4800 can be found in the 850 MHZ range. Companies like TSS (mobile computer service for Gateway/Dell/etc) and Sears have been know to use it, too.

http://chroot.ath.cx/fade/projects/decoding/mdtmonprog.zip (v1.5.1)

http://www.ozemail.com.au/~gilchris/mdtmon161.zip (missing slicer.vxd)

What does MDT (MDC 4800, RDLAP, etc.) sound like?

http://www.geocities.com/CapeCanaveral/Cockpit/2800/digital/index.htm

ATCS monitor - Much like MDC4800 for railroads.

http://207.105.40.225/index.htm

Happy decoding,

Sparky

By all means think of making a Site up with Frequencies you come across, and for a start; posting them for others in your area and elsewhere to use.

Though some Frequencies are constant, some change and you may have new or newly used ones from the pool.

1021. PRO-92 Question

Newsgroup: rec.radio.scanner
Date: 2001-06-25 18:42:48 UTC
From: pelikandrp@aol.com
Message-ID: <20010625144248.17765.00001406@ng-cg1.aol.com>
Source record: 63738

Hi All,
strange thing with my 92 last night. Running on alkaline batteries in the scan mode, and all normal. I hit manual to stop and stay on a specific freq, and after five seconds of silence on the freq, the unit would shut off :-(
Turned off the power...back on...repeated the sequence...same thing.
Running on the AC adapter, this does not happen. While I did not get any type of low battery warning etc, is this how the unit shuts down when battery is low?
Then...why does it run in the scan mode with same batteries?
Interested in you thoughts and/or comments.

Thanks much!

I have noticed some similar, strange, things occurring just before the batteries give out. Apparently different operating modes draw different amounts of power, and behave differently as the batteries deplete.

My unit has always returned to normal operation when batteries are replaced, recharged, or the power unit plugged in.

I have asked that people substantiate their claims. I do not see Blake substatiating his claim that MOST PD's are now using encrypted MDT. No industry surveys, no marketing numbers, In fact, he hasn't bothered to respond.

All you have to do is a simple web search to find out what most PD's are using for MDT transmissions. Again from what I have found there is no major change from unencrypted MDC4800 and RDLAP in the upper midwest. A trip to the desert southwest last Christmas confirmed that many Arizona and California Agencies are still using MDC4800.

And now I invite you to cite the law that prohibits the reception of unencrypted Public Safety Transmissions. Here's your chance to prove me wrong. Site the actual law as passed by the US Congress. Feel free to post the text of that law here. Put up or shut up.

Hello, Walt.
I have a VR-500 and RT's ADMS-3 software. I like both the radio and the software.
The software, however, is not a controller but a cloning program. With it you can write and save any number of "profiles" for the VR-500. For instance, I have one channel arrangement that I use at home, two for specific airshows in my area, And several others for various functions and circumstances. Each is saved as a file and is loaded into the scanner in about a minute.
It can also be used to clone between two VR-500's.
I'm not aware of a demo of this program, though.

Thanks Urei,

Yaesu advertises this radio, on their website, as having "computer control" as one of it's features. Apparently there is no program available to accomplish this. Strange.

1027. FS: Realistic PRO-34 200 Channel Scanner w/case & manuals

Newsgroup: rec.radio.scanner
Date: 2001-06-25 20:32:35 UTC
From: photosbychris@att.net
Message-ID: <3b37a00b.42491848@netnews.att.net>
Source record: 63744

Realistic Pro-34 200 Channel Scanner in excellent condition covering 30-54Mhz, 108-174Mhz, 380-512Mhz, 806-960Mhz. Includes duck antenna, custom made real hard leather professional case (a $100 value alone) that fits like a glove. It protects most of the radio while still allowing access to top controls and external DC power with unobstructed speaker audio. Owners manual, and factory service manual (not a copy, original) also included. This radio has been well cared for as the picture (http://photosbychris.home.att.net/pro34.jpg) illustrates providing years of excellent service. I purchased the radio new in the first year of production with never a need for service. The radio works as good as it looks, rarely used portable, mainly used to monitor the local public service bands and aircraft around the house in a non-smoker environment. I'll also load a fresh set of batteries so it's ready to go right out of the box, just program and play. This would make an excellent travel scanner for your summer vacation. Price is $250 shipping included, PayPal accepted.

Contact Chris at photosbychris@att.net

>

I'd suggest you spend more time in a pasture before you proclaim what is and
isn't BS.
On the strength of a malicious, false verbal claim of child abuse I was
denied access to my two daughters immediately and for 11 years. It was easy to
accomplish this. It was done, as I stated, by merely making a false verbal
claim to a doctor.
Over the course of those 11 years, I came in contact with HUNDREDS of people
in my situation and read about hundreds more who were all denied their parental
rights unjustly because a spouse or neighbor or some other malicious person
decided to make a claim against them for a variety of reasons that you'd find
appalling and ludicrous.
Don't tell me my case is a rare one or another "exception to the rule"
either. I became completely fed up with that crap over the course of the
aformentioned 11 years. It's just not true.
Just for the record, I'm an excellent parent, my 22-year-old is completely
devoted to me, and my 18-year-old, who lives with her mother
(my accuser) is still a little distant, but we get along very well.
Get your facts straight before you presume to tell others about what is and
isn't factual. Until then, shut up and listen. You've got a lot to learn.

From ECPA

As used in this chapter -

(4) "intercept" means the aural or other acquisition of the
contents of any wire, electronic or oral communication
through the use of any electronic, mechanical or other device;
(8) "contents", when used with respect to any wire, electronic
or oral communication, includes any information
concerning the substance, purport or meaning of the communication;
(12) "electronic communication" means any transfer of ...
intelligence of any transmitted in whole or in part by a
... radio ...system that affects interstate or foreign commerce, but
does not include -
A.any wire or oral communication;
B.any communication made through a tone-only paging
device; or
C.any communication from a tracking device...;
(16) "readily accessible to the general public" means, with
respect to a radio communication, that such
communication is not -
A.scrambled or encrypted;
B.transmitted using modulation techniques whose
essential parameters have been withheld from the
public with the intention of preserving the privacy of such
communication;
C.carried on a subcarrier or other signal subsidiary to
a radio transmission;

D.transmitted on frequencies allocated under part 25, subpart D, E, or F of part 74, or part 94 of the Rules of the [FCC], unless, in the case of a communication transmitted on a frequency allocated under part 74 that is not exclusively allocated to broadcast auxiliary services, the communication is a two-way voice communication by radio;

Section 2511. Interception and disclosure of wire, oral, or electronic communications prohibited

1.Except as otherwise specifically provided in this chapter any person who -
a.intentionally intercepts ... any wire oral or electronic communication;
b.intentionally uses ... any electronic, mechanical or other device to intercept any oral communication when

(ii) such device transmits communications by radio, or interferes with the transmission of such communication;

c.intentionally discloses ... the contents of any wire, oral or electronic communication ...; or
d.intentially uses ... the contents of any wire, oral or electronic communication ...;

shall be punished as provided in subsection (4) or shall be subject to suit as provided in subsection (5).

RDLAP and MDC4800 are not encrypted, nor have the essential operating
parmameters been withheld from the general public in regards to baud,
frequencies used, mark & space tones, etc. Heck the name of the
transmission scheme has the BAUD RATE in it!

In fact, as I have pointed out I can legally purchase MDT's that use
these transmission techniques. I have attended Motorola Seminars
open to the public where they have dissemenated "White Papers" on
their various transmission schemes. Although the transmission scheme
is proprietary, it is not private. People here have confused
proprietary with private. Not the same. Motorola has not made an
attempt to keep this info private:

Look here!

http://www.mxcom.com/prod_info/pi969-1.htm

And that info took me 10 seconds to find. Block Diagrams,
Transmission schemes, error correcting protocols used. This is info I
can get in BOOKS. Go to a good technical library, for Gosh Sakes!

And it is not illegal in the US to reverse engineer a standard. If it
were, IBM woulda won that case against Compaq, and we wouldn't
probably be using PC's right now...

Furthermore, the Police as a public agency are subject to public
scrutiny. Part of the Rodney King case of violating his civil rights
was based on transcripts of the MDT's of the officer's involved in his
beating. I can, under FOI, request the transcripts of any and all
police communications.

Right, which is what I said. If you disclose what you intercept to the general public or misuse that information for criminal purposes you are breaking the law.

SO you have not proved your case. It is not illegal to decode MDT that is sent free and clear. The majority of public agencies have not gone to encyrpted standards yet and the transmission schemes of the unencrypted standards are not private, because the manufacturers will share every nuance of their software and hardware with anyone who cares to look or ask...

And here we have a clear case demonstrating that citing one's source on UseNet only serves to prolong the bickering.

Read the first clause of part one. It states that anyone who INTERCEPTS is in violation. It's not just disclosure anymore.

You can't focus on one word of a law. The meaning of the law has to be taken in the entirety and not just the clause, single word, or section of the law.

Many people quote Shakespeare as saying "Kill all the lawyers."

But the whole quote is something like, "if you want tyranny and anarchy to rule the land, first thing you do is Kill all the lawyers.

The meaning is totally reversed when you look at it in it's whole.

"1.Except as otherwise specifically provided in this chapter any person who -
a.intentionally intercepts ... any wire oral or electronic communication;
b.intentionally uses ... any electronic, mechanical or other device to intercept any oral communication when"

If you look at the preamble to your "intentionally intercepts" it says before your - EXCEPT AS OTHERWISE SPECIFICALLY PROVIDED...

And as Never Anonymous Bud pointed out, ECPA exempts the interception of governmental agencies. His quote:

>>ECPA also specifically exempted communications that are 'readily accessible
>>to the public', including those transmitted by "any governmental, law
>>enforcement, civil defense, private land mobile, or public safety
>>communications system, including Police and Fire."

ECPA is designed to protect communications between private parties. It is not designed to prevent the reception of public service agency transmissions. To do so would be in violation of various state and federal public scrutiny laws and constitutional provisions, including the original Federal Communications Act. I hate to bring in Posse Comitatus (really I'm not a kook), but look at Title 18 US Code, Part I...

You can be COWED into believing that you don't have the right to public scrutiny of a public agency, but it'll take a real COURT CASE

by a federal judge, before I consider it illegal.

To allow the police to conduct their business in total secrecy is to allow a police state.

And you would not believe how UNPROFESSIONAL my local PD is when using MDC4800 as they are not aware that anyone with a scanner and a laptop can see what they type...

Which brings me to the real point of having posted the law as I did. IF you read the words, and if you read the exemptions carefully, you begin to see conflicts in the text. What is not permitted often conflicts with the text of what is exempted. We're not talking about Shakespeare, here, this is not poetry. This is text of law. Legal text is specific till it draws blood, and ambiguities are not part of that program. Any yet, reading clearly and understanding the specifics taking the law in it's totality, you read that it's not permitted to intercept any oral or electronic communication, except as noted, and the notations are broad and often vague.

Further, it's pretty clear that the thrust of this law is aimed at Cell spectra and little else. And yet, Bill Cheek was prosecuted for selling devices that specifically permit MDT decoding, as well as a host of other and LEGAL uses.

Which brings me to my point. The purpose of the law is not sufficiently clear. Language of the law, as written, permits selective prosecution, and conviction, with punishment to be meted out, or not, by, as you so very correctly pointed out, a court test. Indicating that the law was writted to ameliorate the concerns of CTIA, based on grossly misunderstood technology, while seeming to open the door for prosecution of those who would monitor and use the technology for criminal intent.

This is pretty much the definition of a 'feel good' law. A token act, based on misrepresentation and fear mongering, with sufficient ambiguities that the real legislation is to take place from the bench, not the halls of Congress. It lets Congress off the hook for the ignorance, and the curtailment of perceived civil rights, and it allows judicial activism to sort out the results of their spinelessness.

And, as in most such cases, only the law abiding are penalized.

(Let's not forget that the major revision of the law was in response to one of their own getting caught with his mouth open.)

Which then raised the question why was Bill Cheek arrested?

Under the specifics of the law, what he did was questionable at best under the darkest possible circumstances. Under the specifics of the law, what he did was perfectly legal in the realm of sale of legally used and applied devices.

However, his vocal and often strident insistence in circumventing the intent of the law protecting the interests of CTIA was very difficult to ignore. Note that he was prosecuted for selling data slicers used for decoding MDT, not his publication of cell modifications for receivers blocked to cell spectra. Neither of which, btw, are specifically illegal as the law is written. But they are in conflict with FCC regulations, which are not codified into the existing law.

The law was used to selectively prosecute him, in error, by the way, waiting for the courts to sort out the arguments on either side, and legislate a clear path for the direction of this law and it's enforcement.

That Congress should pass such a law raises the questions about whether they either know and understand how the law works, or their education is as bad in civics as the rest of the current crop of graduates. In either case, it is the courts who make sense of laws that are both poorly written and ambiguously presented. The result is that there is no specific protection of any right or activity from baseless prosecution and conviction.

And that's how law works in this country today. It's not as simple as a traffic ticket, where you break a known law, you receive a clear punishment. Today, it's not clear what exactly the law is. And Law Enforcement is more about 'sending messages' than it is about enforcement of existing law. With the result that the punishment becomes not what's meted out at the end of prosecution, but the prosecution itself, and the fact that even if the defendent is innocent, the prosecution never ends, until either the government, or the defendent is drained of all resources. Or dies.

And still there is no clear definition of legal and illegal activity for the citizen to accurately meter his behaviour by. Meaning with little recourse or protection, one can be targeted for prosecution under a law that does not specifically proscribe a behaviour for which one is being prosecuted. Literally, prosecuted to death.

How are such persons targeted? Pretty clear, they attract attention to their behaviours, and become the focus of public attention. Usually through media hammering of misinformation. Bill Cheek's arrest coincidently followed a huge national media blitz at both the network and the local level about scanner use, and criminal

abuse, with the thrust of the stories almost unanimously being that only the criminal has, or uses a scanner. So, attention focussed on everything said by anyone about the topic.

Make no mistake these newsgroups are read, monitored and absorbed by both media muckrakers looking for their next big social injustice story, and the government. And the open discourse here expressing contempt for law, the outrage of regulation and the vocal statement of intent to monitor, specifically cell spectra but more generally 'private' communications in general, attract the kind of attention and prosecutorial lightning that struck Bill Cheek, and that the ambiguities of the law, coupled with the massive distribution of gross misinformation, permit.

And still there are more laws coming. Billy Tauzin will not rest until we are limited to nothing but domestic broadcast in this country. Why? Because so many have brought to his attention the open discourse about what is monitored, and what WILL BE monitored. And because commercial interests demand more of these feel good laws.

So what does this mean in practical terms?

Simple...when they wantcha, they gotcha. Baseless or not, they'll drain you to bankruptcy to make their point. And there's not a trial lawyer in the world who won't let them. Ask any trial lawyer what you can do to protect yourself, and he'll say, "Well, you'll spend a little money to protect your civil rights." What he doesn't tell you is that even if you don't have the money, he's already spent it, and that the one who determines how much YOU spend is the guy on the OTHER side.

Further, they decide if they wantcha by the amount of time you spend publicly telling the world that you intend to continue doing what the law is unclear about, but the FCC has said you can't do.

So in very real terms, you may be right: It may not be illegal to monitor MDT. But that doesn't mean they can't prosecute you for it. They can.

Make no mistake. They can prosecute you for it. It may not stand up in court....but by the time you're bankrupt, what difference does that really make?

Realistically, he only way to protect yourself while continuing to enjoy the hobbycraft that you love so much, is spend a little less time shouting from the rooftops that they can't stop you.

You don't have to go underground, into hiding or live in the shadows. You only have to be more discreet.

Because even if it's perfectly legal...they can still prosecute you to death.

And the law is written just ambiguously enough, to permit that.

Looking for the following rocks for an old Craig 4350A 8 chan. scanner that came in to the church for our rummage sale, figured if it had the local fire dispatch in it as well as the Sheriff it might draw a few bucks more. No manual, so don't know the proper "mix", and hate to go thru Jans or RS for new ones when they would end up costing more than it'll sell for. Works pretty well so might as well see if we can rock it up for somebody's kitchen counter or nightstand.

Need 46.16 for sure, and 46.22 would be great if one came up (Fire freq. #2), dirt cheap greatly appreciated. Many thanks for reading and checking the treasure drawers. Email replies please.

Here's a little info. Those routes are owned and scheduled by 104
Fighter Group, Barnes ANGB, Westfield, Mass.

The closest Flight Service Stations (where route users might call in)
are BGR and BTV. I don't know the full names, but your son ought to,
or would know where to look them up.

Descriptions of MTRs are in the AP/1B Area Planning book. I'm not
aware of any on-line version of that, but if you do a google search on
AP/1B you'll find where to buy one. They're only a few dollars.
Updated every eight weeks, but for most routes there are rarely
changes.

(If you e-mail me your snail mail address or a fax number, I can send
you the three pages that cover those routes. My e-mail is kplotkin at
clark dot net.)

>found this out because my son, who is a private pilot, was going to take

[snip]

Smart to be nervous. Do a google search on "Military Training Routes"
and look for articles on encounters between GA aircraft and jets.
Fighters will typically fly at 450-500 knots on these routes.

> BTW, we asked the instructor at the local airport we flew out of, and
>he said not to worry about it, that the fighters knew where we were, and
>while they might buzz us for fun, that they wouldn't hit us, but we were
>afraid, because doing circles we were afraid that we might confuse them.

They'd know about the airport. The AP/1B descriptions identify that
kind of thing, and even have a caution about a hang gliding area on
these routes. But in the middle of a leg, it's see and avoid.

It's tough getting information on route usage. I've done noise
studies along these routes (for the Air Force) and even working with
the airspace manager and route scheduler it's hard to know when anyone
is going to fly.

But Gregor's suggestion of getting the squadron frequencies sounds great. Hope this info about the base helps with that.

>... Next time my son visits, I'll have him ask that when he calls.
>Not being a pilot myself, I wouldn't want to bother them.

Besides seeking frequencies and use info, have him ask about safety flying in this area. Military pilots are more safety concious than some of the public gives them credit for, and I'll bet they'd be happy to tell him what to watch out for along those routes.

I answered your question. Go about your hobbycraft...do what you
do. And don't shout it from the roof tops. The more unwanted
attention you get, the more misinformation will be spread in the
name of 'security.'

The more you DON"T brag about what you can hear, the less
attention will fall into the hands of Billy Tauzin about who and
what is and is not a perceived threat.

Now is the time for all of us to start thinking before we open our
mouths.

Um, what did I say in my first post? And I quote:

"So decode away. But don't blab what you see around town or post it to the internet (which is illegal). And don't do something stupid like show your mobile MDT decoder (in your car) to the local blue meanies (That's the police, for you kids out there)."

But that doesn't mean you should discourage people interested in getting started either. I'm not some elitist boob who wants to hide information from people seeking knowledge. We all had to start somewhere. If people can't freely exchange technical information here, what is the purpose of this newsgroup? I submit that if talking about scanning brings negative attention to the hobby and further legislation, that this NG be disbanded for the good of the hobby...

If you read what I wrote again, you'll see that I'm not advocating
discouragement,

> I'm not some elitist boob who wants to hide
> information from people seeking knowledge.

I specifically said we should not hide.]

I said we should be discrete.

That's not an extreme.

> We all had to start
> somewhere. If people can't freely exchange technical information
> here, what is the purpose of this newsgroup? I submit that if
> talking about scanning brings negative attention to the hobby and
> further legislation, that this NG be disbanded for the good of the
> hobby...

And this is PRECISELY the tack taken by the otherside: Distort
something to the extreme and then dismiss it as impractical.

Trouble is, there's a reality here that you have to accept: This
hobby is under fire because of our own braggadocio, and our own
irresponsible public braying. And to get the spot light off of us
and on to more substantive issues, we need to STOP THE PUBLIC

DEFIANCE. Stand up for your rights, practice your craft, but stop the sabre rattling.

To repeat, I didn't say hide, I didn't say hoard information.

I said Be DISCRETE. Technical information is one thing. Bragging about your intent to intercept is something else entirely. You DO NOT have to attract negative attention to exchange technical information and enjoy your hobbycraft. You only have to NOT call attention to the issues that are sensitive when you do it. It's a reality. We have to be discrete. As much as we'd like not to, it's reality. You have to. Or things will only get worse, and much more restrictive.

The interesting thing about this hobby, is that anything that is happening NOW, was happening decades ago. Sony, in fact, made AM/FM receivers with PSB frequencies built in. Those included all mobile phone frequencies. These things were sold in department stores. We listened police, fire, public safety and mobile phones day in, day out. And no one said a word.

The difference was that we didnt' BRAG about it. We didn't go out of our way to tell people that we had this capability, and what we could hear, what we did hear, and how we intended to continue doing it. We didn't record what we heard, only to send copies of it to the person we heard, and whatever third or fourth parties. We didn't alert the media.

Somewhere between then and now we lost that contact on common sense. Hell, I've had listeners go so far as to call me on the air to tell me they were listening to my General Manager's phone calls and what he was saying. THAT's the kind of behaviour that's called negative attention to the hobby.

THAT's the kind of thing that you want to stop.

Especially HERE. Especially HERE, where the very people who have the power to curtail our rights, read and watch. Stop discussing what you're listening to, stop discussing what you hear. Keep our mouths SHUT. Exchange all the technical information you want. Encourage other practitioners in their quest to join the hobby. But stop the bragging about what we hear, and stop shouting from the rooftops that you intend to break the law whatever that law may be, or may become.

Is that clear enough? Stop arguing extremes. Start arguing, and displaying, discretion. Start showing the people who are most fearful of this hobby, that we who practice it can be trusted not to abuse our expertise.

If we don't, there is no limit to what actions the powers can take. And they'll do it with poorly worded, ambiguous laws, that permit selective, endless prosecution while the courts sort out the

real issues and do it on the poor citizen's dime.

Is it getting through now?

Again, look to my first response. A person made in inquiry into the technical aspects of MDT transmission. No one would help him find the information, he was dismissed by a bunch of armchair lawyers - just telling him it's illegal and that they're all encrypted anyway, so don't even bother...

I don't seem to recall bragging I was going to break the law or rattling a sabre. I disseminated the information the originator of this thread inquired as to. I gave a link to the software, where to look for signals, a link to the hardware (and the more technical aspects - baud, data framing, etc.), and a link to what different signals sound like. And I urged disgression.

No one else did those things or would. For Shame.

" Weird "

The other day I went to the Eaton Centre in downtown
Toronto,Ontario (Canada).

Now this is where the weird part comes in, On this day I had a Realistic
Stereo Tape Player with me, CAT.NO.14-9200 - Model NO. SCP-54. And as I'm
walking around the mall, I start to hear the Security Frequencies being
broadcast over my Stereo Tape Player, But there's no Security Personel
around me anywhere. Weird huh?

Thought I'd share this and maybe get some feed back.

Thank-You

1054. winradio cellphone mod all models

Source record: 63724

Hi all I have finally got this right .

this is the way to go carefully undo the sheild plate off the win radio

identify the main processor chip it is the square one with at least 40
pins right round

counting from the dot and the edge flat count 18 Pins

then identify the GND pin.

take on 9 volt battery or filtered power supply with no ripple otherwise we
will need to filter it
with a cap

at least 2000 mfd it is important that there is no ripple voltage

we are going to reset a fuseable link in the main micro

so then place the negative to gnd and the positive to pin 18 there will be
no spark or anything that dramatic
please be careful to get the right pin
reassemble the radio and place back in the computer ,

this mod works and has been designed to re enforce my veiws on the banning
of cell phone rx in country that should be free and liberty ,

cheers
vk3 diz

I found the clue! now to try and repair it. Anyone else who attempts to repair their radio please email me directly as to the outcome also what caused the transistor to go bad. Good luck to all .....see the link below

> devoted to me, and my 18-year-old, who lives with her mother
> (my accuser) is still a little distant, but we get along very well.

As long as you can't get close enough to smack her, right?

> Get your facts straight before you presume to tell others about what is and
> isn't factual. Until then, shut up and listen. You've got a lot to learn.

Yeah, sure...11 years over nothing....lawyer couldn't clear nothing in
11 years.....and the old lady booted your butt because you are such a
straight up nice guy.

BTW devotion is not even on the the good parent scale. It falls under controlling, typical in abusive environments. Go figure that would be your benchmark.

(...)

> Further, it's pretty clear that the thrust of this law is aimed at
> Cell spectra and little else. And yet, Bill Cheek was prosecuted for
> selling devices that specifically permit MDT decoding, as well as a
> host of other and LEGAL uses.

No Bill was busted for selling the device and SUPPLYING THE SOFTWARE.
Without the software exchange they had nothing on him. Case in point the
other folks that continue to sell data slicers.

Slicers good....software bad.

(...)

> Which then raised the question why was Bill Cheek arrested?

Because he supplied the software to decode MDT and the big bad and dumb
Fed could say he sold the slicer with the intent to decode MDT a no no.

> Under the specifics of the law, what he did was questionable at
> best under the darkest possible circumstances. Under the specifics
> of the law, what he did was perfectly legal in the realm of sale of
> legally used and applied devices.

See software.

(...)

> The law was used to selectively prosecute him, in error, by the
> way, waiting for the courts to sort out the arguments on either
> side, and legislate a clear path for the direction of this law and
> it's enforcement.

Sounds good but they were selective at picking a person who was supplying
the MDT software with the slicer. Who else has done this? Nobody that I
am aware of. Intent can be everything.

>
> How are such persons targeted? Pretty clear, they attract
> attention to their behaviours, and become the focus of public
> attention. Usually through media hammering of misinformation. Bill
> Cheek's arrest coincidently followed a huge national media blitz at
> both the network and the local level about scanner use, and criminal
> abuse, with the thrust of the stories almost unanimously being that
> only the criminal has, or uses a scanner. So, attention focussed on

> everything said by anyone about the topic.

No, they do something really dumb by supply MDT decoding software with the slicer. Whops, slam Bam!

(...)

> Because even if it's perfectly legal...they can still prosecute
> you to death.

Why wasn't OPto and a half dozen others prosecuted for selling data slicers? Why weren't they prosecuted later? Simple. They didn't offer it with software to decode MDT. See the difference.

Hey I feel bad Cheek got busted too, but he made a dumb mistake. Oh well.

I GUESS I HAVE FOUND THROUGHOUT ONE OF THE NEWS READER, WHAT IS WRONG WITH MINE HERE IS THE TIP;
Uniden/Bearcat BC200XLT Portable - Loss of Audio and Dial Lamp
If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed. Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail

It's not really that weird, the play head in your tape player is basically a coil connected to an amplifier. If nearby RF is strong enough, it will leak into the circuitry and end up coming out of the speaker or headphones, just like a mobile phone signal breaking through your stereo system. Just because you couldn't see the security guys, doesn't mean they weren't there.

If you want to hear about the weirdest radio reciever, I recall a story in a science magazine many years ago. It was about a guy who's amalgum tooth filling started to recieve nearby AM broadcasts. Apparently the metal in the filling had formed a diode detector circuit and the strength of the transmission was such that it caused the filling to vibrate to the audio being broadcasts. This is not uncommon around powerfull broadcast antenna sites. I've heard stories of rusty down pipes also blaring music from the nearby transmitters.

1065. Portable Scanner Antenna

Newsgroup: rec.radio.scanner
Date: 2001-06-26 09:47:32 UTC
From: Roby <plroberto@usa.net>
Message-ID: <MPG.15a278a3eca599659896a7@news.polito.it>
Source record: 63632
Cross-posted to:

Hello,
I'm planning to build a simple receive antenna for portable scanner use made of a copper wire (60-70cm) connected directlly to the BNC.
I'll use it to improve the reception in the 100 - 900 MHz (mainly 100-200MHz).
I'm wondering how will this antenna perform and which bandwith will it have.
Another question: how can I improve the bandwidth of the antenna (i have been told that is possible to put some capacitor somewhere to lower the Q and rise the bandwidth) for using it over all the bands (100-900MHz)

Does anybody help me?

Thanks,
Roberto

I needed a battery pack for my ICOM IC-R1.
Icom wanted $180.00 for this. I got ahold of Signal Electronics in Torrence California. I spoke to the owner Via email and I sent him the specs. The made a custom battery pack and charged me $36.51 with shipping. That was 2 years ago and they still work great.
Hope this helps you.

This is exactly the attitude that I had to deal with for those 11 years and more. Another self-proclaimed expert who probably has no children at all, but miraculously has all the answers.
FYI, my "old lady" is a paranoid schizophrenic who has been on anti-depressant drugs for many more years than I've known her, was using cocaine when I was accused, was living with a known coke dealer at that time, and was, herself, extensively abused and mistreated as a child.
I reiterate, spend some time in the pasture. You even believe your own BS.

Are you talking about police data bursts over normal voice transmissions?
If so, this is called packet communications.
As far as I know, there is no packet decoders for police packet.
MDT decoders on the other hand are quite common on the internet though I find
them boring.

They should have left Bill alone.
They can't make a sweeping law and make it stand.
Make cell phone pickup illegal, fine, we'll just make our own
special cell band receivers.
They don't own the airwaves, but for some reason they think they
have a right to sell them and control them.

I just think banning cell phone reception is bullshit.
Back in the 80's it was viable, now it makes complete sense with
digital scrambled communications to unblock all bands, just encrypt the digital
voice data with a format that can be easily and instantly upgraded if someone catches on.
My point is, 800Mhz is for old cell phones in analog mode, which is a rare mode now.
I say if they don't want their "customers" heard then they might consider encrypting their
"customers" communications instead of blocking our radios.
It's entirely a commercial thing and it pisses me off that the FCC sold out to the cell
companies
and now that when there is no need to block 800mhz, the FCC is still passing laws for
Uniden and Radio
shack for patented epoxy lumping on their circuits so they can't be modified.
You know as much as I do that if you knew the codes to unlock the Uniden scanners you could
do it up the
serial port so its all a lie to the FCC to begin with.
Also it's very easy in this day and age to build your own cell receiver radio with a simple
AM and a few components
so no big deal.
On the other hand, it really isn't worth listening to but hey, its the principle. If you
want to bore yourself to death listening
to it, esp when it skips around in mid communications then go ahead, its your right. The
electromagnetic spectrum is free
and no one has a right to regulate the reception of electromagnetic radiation.

I am looking for your suggestions to replace my aging fleet of cassette recorders used with my scanners. Some have been working for years and are nearly falling apart while some were purchased only a year ago and are toast. I have tried Panasonic, Sony, realistic, and Optimus. Seems they dont like being left on all night in a stand-by mode until the signal opens the circut and turns on the recorder.

I am looking for your recommendations. It is difficult to find recorders with the necessary jacks to allow the scanner to turn on/off the recorder (remote jack). For the most part my recorders sit on a desk next to the radios but occasionally I take them on the road during a vacation. I would think I could get more than a year out of these units!

Let me know what you would recommend. Thanks!

Paul Zook

I'd just stick up a 1/4 ground plane for the lowest freq to be used.
It should work well enough for gov work. Being as you want 100-200
mhz, just cut it for about 100-150 mhz. It will work well enough on
that range of freq. It will still receive the high UHF stuff with a
less optimum performance. If it's not good enough, make another one
for UHF. They are very small and cheap to make. Don't add anything to
broaden the bandwidth. You don't need it for receive purposes, and it
will just reduce the performance on the range you cut it for. You
could also try a discone or similar, but they cost more. A GP can be
made from a so-239 and 5 pieces of wire. Cheap. MK

For desk use I'd pipe the audio into freeware like Scanner Recorder
(www.davee.com), which has builtin VOX logic.

Works great, and is free. No moving parts to wear out.

Raised two and worked with kids for over 12 years. I speak from
experience.

> FYI, my "old lady" is a paranoid schizophrenic who has been on
> anti-depressant drugs for many more years than I've known her, was using
> cocaine when I was accused, was living with a known coke dealer at that time,
> and was, herself, extensively abused and mistreated as a child.

You must be a real piece of crud if you couldn't get a lawyer to defeat a
mentally unstable drug addict "living with a known coke dealer". Yes, you
must be a work of art to lose to this group! Your record must be stellar
to say the least!

> I reiterate, spend some time in the pasture. You even believe your own BS.

Let's see you lost your kids to a drug addict for 11 years due to ONE
unsubstantiated claim. Your lawyer couldn't prove her mental problems,
her addiction or her life style but one unsubstantiated claim caused you
to lose contact with your children. Mom lived with a "known coke dealer"
but your lawyer couldn't do a thing.

Who you trying to BS? Get out of the pasture and out of the sun.

Your correct, I have used this and it works great, but I need something that is more portable. Plus I listen to the tapes in my car and in my walkman.

You probably are a lawyer.
I had no lawyer. It was determined by the court that I could somehow afford
to hire one on my take home wage of $130 -support.
I went through the entire process without legal representation.
What, pray tell, are your qualifications here? What leads you to the
conclusion that mine is a BS story? Exactly who the hell are you, anyway?

Yeah, that will attract attention all right!

Frankly, I'd have a hard time wanting to use such a phone. I can see
what will happen: Order something and put your credit card info on the
air. Yeah that's really brilliant. Or have an argument with your
spouse. At least there is good entertainment value there.

No, I really wouldn't do this, not just because its illegal, but
because it's incredibly dumb.

Dumb

> It was determined by the court that I could somehow afford
> to hire one on my take home wage of $130 -support.

Oh so it's the system that is at fault because you have a crappy job and
no brains to hire an attorney. In 11 years you could come up with the
cash to get an attorney and "save" your daughters from an abusive drug
using mother living with a coke dealer. I still don't think we are
getting the whole story from you.

> I went through the entire process without legal representation.

Not the systems problem, that was your fault. See above re: past 11 years

> What, pray tell, are your qualifications here?

I can read your post.

> What leads you to the

They are being chased by the ARRL , FCC and DOD, in this order I think.

Seems that some of them are up on the Military Aero Bands, and Ham Frequencies.

I have seen them (or similar) a few months back down in the Electronics Shops
in Miami.

Touted range was about the same.

Sheesh, buy a Digital Cell Phone; with rates so low the only cause for the old
Twisted Pair is for my Fax Machine, I am loged on via my Cell Phone right now.

H.elp
I have an old Regency Z10 scanner I can set the scan frequencies for 1 thru 10 OK, But the Scan Program lo an up frequencies have me stumped. it is now set for 162.000 thru 164.000 and I can't change it even by trying to go thru the same or simular steps to the 1 - 10 channels set procedure. Can anyone help.

And if any one has a listing for the Bradenton Florida Ploice and Fire I this would also help.

Thanks,
Bill Cataldo

I use a little program called 'Scanner Recorder'. It saves audio
(voice activated) to a wave file instead of tape. Just plug earphone jack
into soundcard. Here's the link to the main page:
http://www.hitsquad.com/smm/programs/ScannerRecorder/

I'm ready to add an outside antenna to my portable scanner, a UBC 3000XLT. Don't want a huge presence on the roof so I've narrowed it down to:
1. a discone in the attic or 2. a magnetic mount on one of the metal vents on the roof. Is it better to have the outside antenna than the one inside even though it is probably a better antenna? I know...depends....on what I want to listen to. Just looking for some general advice. Thanks in advance for any thoughts on the subject.

Wrong pal! Glenn and his wife raised a fine young man who is living credit to their parenting skills. Glenn also took in a relative's children out of a difficult home environment and provided them with a stable home in which they had a chance to finish their young adult period. I'm not going to proclaim that what worked for them has to work for everyone, but thus far glenn's methods have proved successful for his family.

The discone covers a far greater frequency range than any mobile mag
mount. I guess it all depends on what frequency/ies you are intersted in.
OTOH, I would recommend BOTH. You can never have too many antennas!

Glenn

Definite? Maybe. The new issue of Monitoring Times (July 2001) on Page 66 reports a sign at the ScannerMaster booth at the Dayton Hamvention that read:

APCO-25 Digital Monitoring Solution
Scanner/receiver Drop-in Board
Available in 2001
Offers low-cost solution for receive-only
Also provides all-band analog trunked/
conventional reception

They go on to say that this is apparently for the BC-780XLT. I haven't reported all the details, but this is the meat of the comment. Buy the July issue of Monitoring Times for the rest of the details.

I'm the sound man at my church. A couple of years ago my old snake (multiple mike cable) started to pick up a 50Kw news station about 30 miles away. Only trouble, it was on the pastors mike during the middle of the sermon. He kept giving me dirty looks as he thought I was playing a "joke" on him. Thank goodness, after the service, I could show him what was happening. A dirty contact had started acting like crystal radio. Needless to say, after I cleaned the contacts, it quit receiving. Next week it was back to business as usual. Oh well, it made for an interesting Sunday. A few parishioners did "complain" that I should have got the local baseball game instead. Just can't please everyone. :^)

This is the good oil.

Uniden have confirmed they are working on a digital capable scanner for release in 12months or so.

Scannermaster have displayed an ad at Dayton, saying that by the end of 2001 they will release an APCO 25 Scanner/Reciever add on board. No mention of it being specifically for the 780. By saying "Scanner/Reciever add on board" I assume that means the board can be wired into any/many scanners or receivers.

It has also been a report that WinRadio are working on APCO 25 software for their PC based scanning receivers.

I think the race is on, Scannermaster can access a huge market if their add on board can be fitted into any scanner, so why limit it to the 780XLT?. Also, Uniden may have bought the license to use Scannermasters technology for their future digital capable scanner. I'd say they are all hush, hush about what they are doing because loose lips sink ships!!.

But the race is on, and the winners will be us!

Mike

I have used this type of recorder before, but it is not portable and I get
too much signal interference from the computer.

>That logic is no different than with any analog cordless phone.

Except that the only folks who would notice you with a common 47CFR15 analog cordless phone are your neighbors. Use that high power version and you're likely to annoy a lot of people across a major metropolitan area. Given a population that large, there is a good chance someone may take enough offense to use whatever you say on the air against you.

Part 15 Analog operation may not be smart, but this stuff goes in to the outrageously stupid category.

Thanks. I'll ask my son if he has that book. He had a really fat
little book that I think was just descriptions of airports, but he may
have the one you refer to as well. If not, I'm sure that he would want
to have it.

> >... Next time my son visits, I'll have him ask that when he calls.
> >Not being a pilot myself, I wouldn't want to bother them.
>
> Besides seeking frequencies and use info, have him ask about safety
> flying in this area. Military pilots are more safety concious than
> some of the public gives them credit for, and I'll bet they'd be happy
> to tell him what to watch out for along those routes.

When we flew onto the mtr, he called the Portland approach, and they
said that they would notify him if any military traffic came in.
However he was flying so low that he dropped off their radar. He had to
tell them by radio that he was still there, and to still notify him. So
I think safety wise, as long as the approach channel is called, we would
probably be given warning. But I'm still interested in being able to
hear the fighters announce their activation of the route.
Yesterday I was listening to one of the Boston Center frequencies
that were given to me, and I heard a plane identified as "Tomcat"
something or other, being cleared onto some route, at which time some
nervous private pilot came on frequency and said something like "you
just cleared that Tomcat onto the same vector and altitude we are
flying". I couldn't hear the ground portion of the conversation
unfortunately, but later heard the Tomcat accepting other
transmissions. I assume (maybe wrong) that this Tomcat was an F-14, ie
I'm not sure how military aircraft identify themselves to the civilian
controllers.
I've done a lot of listening to civilian planes talking to airport
approach, tower and ground control, and know most of the "lingo"
involved there, but listening to this "Boston Center" (which I assume is
more of an in-route thing rather than take off and landing) thing seems
to be a different language which I'll have to learn. I've been trying
to identify the routes they are talking about on my sectional maps, but
I'm not having much luck yet. It's interesting listening though.

Thanks for the help.

1122. swap HP Jornada 540 for scanner

Newsgroup: rec.radio.scanner

Hi all,

I have a Hewlett Packard Jornada 540 handheld PC with the USB cradle, optional hood and extra Windows software, all of which is an unwanted gift. Excellent working order and nearly new condition. In this week's paper at £175 - but I'd swap it for a decent handheld scanner - Yupiteru MVT-9000 or similar.

If you're not sure what a Jornada 540 is, look here;
http://www.a2000d.com/HP540.htm

If you're interested, mail me here zero@elivefree.net (I'm in Somerset, UK).

Cheers

1127. Repair help needed - deaf Pro-2036

Newsgroup: rec.radio.scanner
Date: 2001-06-27 16:46:00 UTC
From: nobody@home.com
Message-ID: <3b3a0aed.10961613@news.rchmd1.bc.wave.home.com>
Source record: 63693

Hi All,

I have a Realistic PRO-2036 Scanner that is deaf on all bands except 805-950Mhz. The guy I bought it from (garage sale) was one of those 1000Watt CB types, so I have a feeling he fried the input of the lower frequency tuner. Since this scanner has a separate 800Mhz band tuner board - it sort of makes sense. No wonder he was selling it...

If anyone has any hints or has "been there, done that" I would greatly appreciate your help. I have a feeling (and sincerely hope) it may just be one tiny surface mount transistor or diode on the broadband RF amp stage. It works great on the one band, and I can see that this will be a nice unit when it is fully working since I especially love the big tuning knob.

In order to trace out the signal path, I am in need of a service manual and or at least a schematic of the tuner section. Any inexpensive sources?

If sending e-mail, please reply to zholtz aat home doot com

best regards,
Zenon

The FCC Requires all devices it regulates to be Type Accepted and they must
display a FCC ID Number, which may be researched via the FCC Site:
http://www.fcc.gov/oet/fccid/

Neat item to figure out Frequency Info when all you can get to is the FCC ID.

Granted it often only shows ranges but it is a great start.

I am not familiar with that Scanner but I can help with some Frequencies:

FIRE:
72.1000
72.3400
72.5400

Braden River Fire Control District
39.1000
72.9200
153.8300
153.8900
153.9500
154.1900
154.2650
154.2800
154.2950
154.3250
154.3700
154.3850

Police
154.8000
154.9500
155.3700
155.6700

155.8350

Local Police/Fire/Gov/Works

39.1000
39.1800
153.8600
150.8050
158.8050
158.9250

Also try the following Links:

http://www.cityfreq.com/
http://www.trunktracker.com/
http://www.911scanner.8m.com/
http://www.bearcat1.com/free.htm

and http://www.afn.org/~afn09444/scanner/scnsites.html

Check the Florida Links

Hope these get you Scanning.

Hi. I have a couple of questions concerning mil-air scanning. Are typical handhelf wideband receivers capable of receiving UHF air radio effectively? Or would a handheld scanner be better for the job? If so, are there any readily available handheld scanners that can search the mil-air band? Thanks.

1134. Re: Mil-Air Handheld Scanner Question

The two types should be equally effective in receiving those
frequencies.

I personally like the Pro 2004 It is built strong with a metal casing
which helps filtering.I also have on mine the 4 of many mods that are
available including YES the full cell.This scanner receives the
clearest out of any others I have owned and I have owned them all, the
pro 2006 and Pro2005 would be in the same catigory.Just my opinion.

>Subject: Re: Radioshack *best scanner poll*

Guess I will chime in on this thread.

My pick is the Pro-60, though I have other RS Models both Handheld and Mobile

Good coverage 30 to 999.9875 MHz
Works AM/FM/WBFM
Triple Conversion
200 Memory Channels
VFO (Sort Of)
Aero Band Coverage

And the price was right at: $95.00 clearance.
Got to get to the Shack more often to see whats been pulled from the shelf and
put off to the side, best route to some great deals.

True there are some other that I favor but this is a nice unit that does
everything I currently need, but once Palm Beach goes Trunked I will most
likely change my opinion once I break in a good Trunk Tracker.

I would not expect anything over a good Mag Mount Antenna or Telescopic Whip.

You will get line noise and may degrade from what you get with present antenna.

Do some research on homebrew, I got outstanding results with a Paperclip, yes a Paperclip when I was in DC and I lost the 800 MHz. Duck.

The plug in antennas are more for TV/FM but even there they lack.

These things are to be avoided at all costs. First of all, you're
going to get a ton of line noise. Secondly, the wiring of the house
would be too big of an antenna to be effective for a scanner.
Thirdly, I'm just a little leery of plugging an electrical line into a
scanner's antenna jack.

I remember the Partridge Family episode. Don't remember the
Gilligan's Island episode, though. I also remember an episode of Love
Boat that had the same thing as a plot element. It's probably been
used in countless other TV shows as well.

I tried Bill Cheeks S-meter mod on a 2032, it didn't work except AM .
Seems the tap point where the meter is connected is "turned Off"
when not in AM mode, Cheek said there would need to be an addition
to his mod. printed in his book "The Ultimate Scanner" Cheek 3!

Forget it.

The normal simple Lamba/4 antennas hava a useable bandwidth
of about 40 % of the center frequency .

I recommend the use of a telescope antenna, where you can
adjust the length manually.

The rubber coated spring coil antennas have a useable bandwidth
of about 10 %.

Broadband antennas are complicated and not good for portables.
You will need a few different antennas for covering the whole range.

pr.

Hi Frank,

The Scantenna will give you better performance particularly on the higher frequencies than the traditional VHF/UHF Discone with approximately 32" cone elements. Where it is true that a discone of this size will have good gain at these frequencies the pattern is more or less straight up and down. (gain figures without reference to direction are meaningless) This makes it less effective than the clustered vertical dipole configuration of the Scantenna. For a receive only, inside mounted, antenna the scantenna with 50' of RG-6 coax at $44.75 shipped is a excellent choice.

Tim

Does anybody have any tactical frequencies for the CF-18s based in Bagotville, Que? I'm interested in wing ops, sqdn ops or usual discrete frequencies as opposed to the base tower frequencies. Thanks for any info.

Hi Frank,

Here's a reply from another Tim.

The Scantenna is a weird and wonderful antenna. It looks like nothing
else and it works.

I have both a Scantenna and an iCom (model 700 or 7000 I think)
discone, which is, I believe, the one Radio Shack's is modelled on.

I definitely rate the Scantenna's overall performance above that of
the discone.

Thanks Tim. Two questions:

The ad mentions a "300 to 75 Ohm Balun". Is that correct for
my scanner? The manual says the antenna impedance should
be 50 Ohms.

Also, how much more would it be to replace the 25' RG-6 with
9913F coax?

Frank

Use it as it is.

9913f would be a waste on this or any similar installation.

Keep in mind NO one antenna will do it all. I plotted the characteristics of a Channelmaster scantenna, a discone, a 6 band homemade antenna and a dual band Cushcraft 2/440 vertical on different frequencies using local station as a common reference points. Each antenna had certain areas it was the best in.

My point, it all depends on what you listen to and where it is. You can't have enough antenna.

Glenn

Hi Frank,

What Glenn has already said about the use of 9913 type cable in your application is true. There just is not enough pay off in signal gained to justify the cost.

The mis-match of 50 to 75 Ohm impedance is insignificant and should not be a concern. Higher working impedance is better from a high frequency, low loss point of view. A lot of serious microwave type installations use 90 Ohm for this reason. Low working impedance is better for high power installations. You will see 25 Ohm being used a lot in high power broadcasting installs. 50 Ohm was concluded many years ago to be a happy medium, but there is nothing magical about it. In fact if you "looked into" the radio's antenna port with a network analyzer you would be surprised at what you really found. In general all but a few of the very high end radios, Harris comes to mind as one, do not have the 50 Ohm input impedance they say do anyway.

From: qvdepot@qvdepot.com
Message-ID: <4547dab1.0106281938.736dbab7@posting.google.com>
Source record: 63591

Would anyone know which scanner would be best-suited to listen to the frequencies listed on the following page? If you post a scanner model not sold by Radio Shack, please indicate an online facility where it may be viewed and/or purchased.

Also, would you know the range in miles of these frequencies from NYC? Would you suggest a hand-held unit or a base/mobile station?

http://www.n2nov.net/transit2.html

Ideally, I'd like to have access to every available discussion, including "trunked" conversations.

Thank you!

About 2 or 3 months ago, Phoenix Fire started Dispatching for Chandler Fire.
In stead of give Chandler Fire, Phoenix Radios they just add the Phoenix
Dispatch to the Chandler Radio System. So when you hear a call that changes
to Blue Deck Freq, they are changing to a Chandler Freq.

IT's been around for a couple years. Where have you been? They have done right in changing their site. At first it was great..then lousy, then not so lousy and now it sings. But it's not 24 hours a day. They take hours off to do other things.

Remember: it's the full state of Calif except for those counties they do not hook into. Bummer.

attitude guy

Normal. Better scanners would allow the full address. they cut corners.
but you should have no problem hearing the site. they round off. can only
hold so many digits after the ".".

Hello,
I was wondering if anyone else is able to recieve the transmissions on
this site. http://www.apbnews.com/scanner/final/scanner.html?city=chicago

At one time I was able to, but now it seems to be down.
Does anyone have a new site for this or any other one that a person
can receive police calls?
Thank you in advance...
Please respond direct to...

No kidding! I've had that URL in my Favorites for quite some time now.
and you're right about the media. I can't tell you how many times I
listen to local radio stations that are obviously getting their info
from the aforementioned CADweb site (I've driven through some of the
"problem" areas the stations referenced right after it was mentioned
and found nothing going on at all on more than one occasion...some
stations also point out that their info comes from CADweb).

Digital display is OK.
Programming functions is OK.
LF audio is OK.
But the PLL-unit dont deliver any tuning-voltage to the receiver-unit,
therefore no stations can be listened to.
In scanning-mode the data and clock-pulses from the CPU to the
PLL-unit seames to be OK,also the +16V and +5V is OK.
I have a schematic,but no pulses are given,so it is difficult
to know if they have the right shape and amplitud.
Grateful for servicetips,or adress to a site with tips.

It is a totally differant one. I would think that you should be able to enter 148.530, 148.535, or 148.54 before the rounding would take place on most scanners. That is 5 KHz between stations and as close as the filters would be effective on FM for most scanners. YOu will probably hear a station on 148.5375 on either 148.535 or 148.540 due to the way the filters work in the scanners. If the station is fully deviated it may sound somewhat distorted if the scanner is set to those other two frequencies.

The Bearcat BC780XLT is said by most to be a fine Scanner for Trunk Tracking
which the Frequencies you Linked to are for.

The BC780XLT is a Base/Mobile and is available through Scanners Unlimited.

Radio Shack Pro90 and 94 are also quite well received by most.

For reviews and updates on what is Hot and what is not, visit:
http://www.strongsignals.net/

To read up on Trunking, visit:
http://www.trunktracker.com/

Frequencies can be had by asking and reading about the Net.

As far as range of those Frequencies you are looking to get, that could be from
10 to 40 Miles; the last figure is if it is going through a Repeater System,
which I would think it would be for a large city.

Yep, no place to "plug it in". There are no spare connectors or solder tabs.
It looks like it will have to be a "wire in" job...

Mike

Yep, they make good paper weights
also try door stops, though if it is a hand held, not much good for
this.
You could use it to prop up a wobbly table leg, or maybe use it as an
ornament.
If all that fails, keep it in a junk box for parts, for the next one
you fry.

Wonder if that obnoxious color can be changed? They must have found a real bargain on those bulbs/LEDs or what ever. No one in their right mind would have selected that color (baby poop orange) because they liked it.
Other than that, it's a pretty nice scanner for the buck.

When the display lights on my BC8500XLT burnt out, I replaced them (baby poop orange) with super bright yellow LED's. The only problem is that I can't dim the display, but it does go from on to off. I never used the dimmer anyway. You can use whatever color LED you want, but I think the super bright LED's will give better illumination. I toyed with the idea of using green or blue ones, but settled for the yellow ones. Now the display is nice & bright.

There seems to be a clown in every site.The Pro2006,2005,and 2004 were
one of the best scanners ever sold and were capable of full Cell. with
a little mod.These scanners sell all day on ebay for between $200.00
to $300.00 It is cheap guys like this that stop putting good deals up
on baords.Pay no attention to him obviously he doesn,t know much about
scanners .My two cents worth :-)

Scheduling and Originating authority for these routes are out of the 104th Fighter Group at Barnes, Ma. Ap1B references no frequencies, might try searching 138-144 Mhz, 25 Khs steps, AM mode.

For Barnes A-10's try 41.45 (fm) and 138.250 (am) and 138.050 (am), try 286.2 for the Warren Grove Range Ops

Odds and ends off the milcom list at qth.net:

Fri, 23 Oct 1998 15:47:35 -0400
"Ed Langworthy" <elang@mainecoast.net>
Some logs for 10-23-98

Hi Milcommers,
Most of the usual NE planes today.

128.2 (Boston Center) at 1300z, GOLD 92 inbound to Pease.
118.15 (Brunswick App) at 1740z, NAVY LY922.
282.2 (Boston Center) at 1741z DEMO flight going to 290.5
290.5 (Boston Center) at 1742z DEMO 1 in the block 15 to 17
and DEMO 2 is 19 in trail.
290.5 DEMO 2 accepts MARSA and going to VR840 structure.
282.2 at 1819z JAWS 1 go to 222.4.
125.05 (Pease App) PACK 62 doing pattern work at Pease.
290.5 at 1823z DEMO 1 RTB Burlington block 21 to 25.
282.2 SHOTGUN flight of three have a 20 minute delay into Yanke MOA.
311.0 MAINE 91 we have 12 packs total.
119.6 (Brunswick Tower) NAVY LD10N landing.

That's all for now,
Ed Langworthy

Hi
If you were here in the UK, you may as well hang on to it as you would be VERY LUCKY to get $120.00p the average price for a second-hand full coverage (unblocked) good condition 2006 in the UK is about ?70.00p to ?100.00p that's $99.17 and $141.00 and the ones that are ?100.00 are nearly mint. and these are as I said unblocked.
regards
Val
Ps I paid ?75.00p for mine that's $106.23. excellent condition/full coverage/boxed with manual and a/c adapter AND POSTAGE PAID in the UK mainland. btw, I only give ?85.00p thats $120.42 for a perfect condition boxed 2042. still with 5 months warranty left on it.

The Pro-92 is regarded by most as a great Scanner.

To read the Manulas for most Radio Shack Scanners, see:

http://support.tandy.com/support_electronics/2849.htm

The Pro-90 is posted there too.

Maybe looking at different Manuals and asking about will help you find the
right one for your needs.

Best,

Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave

The MFJ-959B antenna tuner covers 1.6 to 30 MHz and features a low noise 20 dB preamp to bring out weak stations. It also matches the antenna to the receiver for maximum signal strength. It accommodates up to two antennas and two receivers. You can select tuner, tuner with preamp, tuner with 20 dB attenuator or bypass.

Rear panel jacks provide for the use of either RCA phono plugs or PL-259 connectors. Size: 9 x 2 x 6 inches.

Requires 9-12 VDC power supply (see MFJ-1312). (Not included)

Lists for $99.95, asking $75 which includes shipping.

Email if interested.

Thanks

The only problem is making sure you have enough room to mount the
LED's. In today's micro radios, even a standard size LED might be a
tight fit.

Ewwwwwww is that the same orange used on the 780xlt? That's the only thing I don't like about this scanner.

Has anyone tried replacing the LEDs on a 780? Is it difficult? I haven't opened mine up to look inside (yet).

>I want to get a RS Pro-92 to monitor local Motorola II trunked system and
>conventional frequencies too. Is this a good radio??

The concensus on the Pro 92 list (Yahoogroups.com) is that the Pro 92 is a good scanner for VHF / UHF, but not a good receiver for 800 trunking. Most users report poor sensitivity, compared to other trunk-tracking scanners.

The quality of trunked reception is blurred because there are three firmware versions of the Pro 92, although two are about identical.

I don't use by Pro 92 for trunktracking because of its performance, but its sensitivity on high band and UHF is fantastic.

There are several Smyrnas in Tennessee. If you were referring to monitoring Nashville in your original post, double-check that they have not gone to a digital trunked system ... none of the scanners currently on the market can monitor a digital system.

Does anyone have experiece with the Grove Scanner Beam (ANT1)? I notice their website does not list the Db Gain of this antenna.

I'm trying to pick between this antenna ($80) and the Create Log Periodic ($300). Can anyone tell me if the Log Periodic is really worth the extra $220?

Regardless which ant I pick it will be mounted about 35' high.

Thanks,
George

You may want to check out the log periodic antennas at
www.kmaantennas.com. They are very well made. The Create looks like
a cheap RS tv antenna.

I think you wouldn't need to change the length of the elements, since a TV antenna is designed to cover a wide frequency range. This makes it perfect for scanner use. All you need to do is turn it 90 degrees so that the elements are vertically oriented instead of horizontal. Usually this is as simple as drilling a couple of holes at right angles to the mounting holes in the boom. Just point it in the direction of the signals you want to hear, and you're in business. You will probably need an adaptor to change the 300 Ohm impedance feedline to match your scanner's 50 Ohm input. You can use a regular TV twinlead-to-F type adaptor. This will give you a 75 Ohm impedance, which will be close enough to not have to worry about any loss.

Well, I did some reading in these newsgroups and on pro-92.com and discovered why my Pro-92 wasn't picking up too well in the 800mhz band. I bought mine on June 2nd, so yesterday I brought it back and explained to the salesperson that sold it to me how it wasn't picking up the signals too well, and wanted to exchange it for another 92. He did, and now I can pick up a lot better, though still not AS good as my BC-245. Still, the 92 is a GREAT scanner. Three major pluses prevent me from just getting my money back. CTCSS, Alpha Display, and computer programmable.

It'd be interesting to see what YOU look like, though based on your silly post, your performance is pretty "cheap."

The Create Industries LPAs are sturdy, easy to assemble, and perform well over the spectrum for tranmitting as well as receiving, and yes, it even receives TV signals quite well, contrary to the mumblings of the 'cheap RS tv antenna' expert...

Jodia,

I have 2 of these RadioShack Pro 2021. They are old scanners but pretty decent as long as you don't need 800 MHz or trunking. The reason it says, AM/FM is because it includes the airband (116-136 MHz). It's scan speed is slow. It is an easy scanner to put a discriminator tap and it can be adapted to use in a car quite easily. In fact I keep one of the 2021 permanently in my car with a mag mounted scanner antenna. Works well. I have the user manual for it somewhere. Send me an email later and I'll try to find it and send you a photocopy.

There have been three different versions of the PRO-92, that I'm aware of. The PRO-92, PRO-92[A], and PRO-92[B]. The PRO-92[A] was a big improvement over the first release, although personally, I had no issues with the first release. The first two were manufactured in Japan, and the [B] is made in China. Other than being made in China, I don't know if any other changes were made.

You can determine which one you have by looking at the back of the radio, on the label that shows the actual R.S. catalog number, and see if it has a suffix after it.

Up until this year we use to spend every weekend in Ocean City MD. Here is the very current (worked in May, 2001) frequency order for the EDACS system in Ocean City.
http://www.flash.net/~av8tor/radios/ocmdtrunkfreq.htm
Also included on the above page are all the talk-groups and everything you need to know to monitor their system. Once your scanner is programmed in the correct order it is a very easy system to monitor.

If you would like what the good Coast Guard freqs that are very active in Ocean City go here: http://www.flash.net/~av8tor/radios/scannercorner.htm. The USCG in OC does not use the Trunk system, however they do have access to it, they still use the USCG marine freqs.

I've looked at the KMA website and do like the looks of their antennas, however this is the reason I was leaning more towards the Create. KMA's website listes a gain of only 8dB where as the Create is listing 11-13 dB gain.

Any other comment are very welcome especially if someone can compare either Log antenna .vs. the Grove Scanner Beam. If going stricly by photos I think the Grove Scanner Beam looks more like a 'cheap' RadioShack TV antenna than either the Create or KMA does. But looks and performance are two totally different things.

I am thinking of trading for a Drake SW8. I am only
interested in the latest version. I would like to hear from
anyone who is knowledgeable about the SW8. I need to know
how much $$$ they are going for. Any helpful Drake
accessories? I am only interested in a MINT MINT condition
SW8.

For anyone interested I have the following radios for trade.
Will consider different offers to trade:

Two month old Sony 7600GR w/Sony AC adapter, case, reel
antenna, manual, and box
One month old Icom R2 unblocked version
Mint RS DX-398 w/case, no manual or AC adapter
Bearcat UBC-3000XLT unblocked, AD adapter, beautiful case,
four mos. old

All in perfect cond.

DeWayne

My looks are unimportant and I see nothing silly about my
comment. I simply made an comment of my observations.
I have owned both brands of log periodic (still have the KMA).
The Create's elements were rolled aluminum (like TV antennas). The
insulating parts were made of plastic (like TV antennas). I had
problems with the longest elements breaking and/or falling off with
the antenna mounted for vertical polarization. I assumed this was
caused by the element getting stress-hardened due to wind flexing.
The KMA's elements are 6061 grade tubing (no seam/much thicker wall)
or 1/4" diameter solid aluminum rod (depending on length). These
elements go through the boom and are locked in with a stainless steel
screw that threads through the boom and element. All of the
insulating material is made of 1/2" thick PVC.

Contrary mumblings?? I don't see where I said anything
negative about the performance of the Create. I only made a comment
as to which one is a more robust antenna, a comment that I will stick
to.

Another poster questioned the gain of the two brands. There is
nothing magic about antennas. If two brands have similar boom
lengths, similar number of elements and cover similar frequency
ranges, they will have similar gain. How the company chooses to
represent those gains are a different matter. A dipole in "free
space" has 2.14 dBi gain. The same dipole at one wavelength height
over ground will have 7.7 dBi gain. It all depends on the reference.

Correct me if I'm wrong (I'm still learning) but I thought "normally" antenna gain was expressed in dB Gain over a 1/2 wave dipole in "free space". If that is a correct statement, than how does your dipole in free space have a 2.14 dB Gain? It has a 2.14 dB Gain over what? (not trying to be a smart $ss, just trying to learn these things).

The " i " in dBi stands for isotropic radiator..... an imaginary point that radiates equally in all directions. It doesn't have any "gain" because it is the baseline that other stuff is compared to.

I said that the dipole in space had 2.14 decibels more gain than the isotropic radiator..... or 2.14 dBi.

If you measured the gain of a yagi in space and got a value of 10.14 dBi,,,,,,, you could say that the yagi had a gain of 8 dBd,,, or 8 decibels more gain than a dipole.

The confusing part comes in when manufactures simply say 12 dB gain. Gain compared to what? If all comparisons were made as free space gain (not influenced by ground reflections) then it would be easy to visualize the gain of the antenna. You'd simply subtract 2.14 dB to see how much better it was than a dipole.

Also, before someone jumps in and says that 2.14 is wrong..... some people use 2.11 some 2.15.

Mr. Cebik has some comments on dBi vs dBd on his web site at http://www.cebik.com/dbi.html

One last thing. I think people make too big a deal about a few dB's anyway. Admittedly, on rare occasions a couple dB's can make the difference in making or not making a contact. But 99.9 % of the time you'll never know the difference.

Good luck with your quest.

[snip]

Issues with the original version depend on the particular Motorola
trunking system you're trying to scan.

My local Motorola system is digital, so I have no way of telling if I
should be happy or unhappy with my Version 1.0. ;-)

But the text tags and the computer interface make me very happy.

The consensus of discussions on pro-92.com and the pro92 list at Yahoo
is that sensitivity varies from unit to unit, and from band to band on
some units. They're just not getting them set consistently at the
factory. There was a recent post describing how to fix that, using
the service manual (about $15 from RSU), a good voltmeter, and the
confidence to go into the radio.

I was driving behind a coroner's van today (ewwww), and I noticed they had some sort of antenna on there.

Anybody know of a frequency they're using here in Rockford / Winnebago county?

Nobody gives a damn what you do with it in England though it may technically be illegal to listen in on police broadcast. I would carefully check the situation before taking it to a country like France/Austria, even being in possession may be illegal.

From: "V.A.S" <smurf123@btinternet.com>
Message-ID: <9hqdgs$hv4$1@uranium.btinternet.com>
Source record: 63302

Hi All
I'm sorry I took so long in posting the results of the Poll, but there was no end to the e-mails and they just kept on coming in....
OK.....
1st place was joint shared with both scanners receiving 148 votes EACH
Pro 2042--Pro 2006

2nd was the 2035 112 votes

3rd was the 2005 75 votes

4th was the 2004 32 votes

5th was the 2026 12 votes (this is a small base/mobile)

6th was the 2045 8 votes.

I had plenty more votes for nearly every model ever made by radio shack, I found most people *just liked* thier radio the best, not because it had loads of features or was *top of the range* but simply because it did all they wanted it to do and they were used to it.
Anyway, thanks to all who voted and e-mailed, it was nice to receive such a good response.
regards

1285. Radio Shack PRO-91 poor sensitivity

Newsgroup: rec.radio.scanner
Date: 2001-07-02 18:14:30 UTC
From: "Michael A. Covington" <mc@deletethisword.uga.edu>
Message-ID: <9hqdm7akb1@cronkite.cc.uga.edu>
Source record: 63301

My Radio Shack Pro-91 (no longer under warranty) has always had rather poor sensitivity. It does not get full quieting from the local NOAA weather station, nor from most other 150-MHz-band or 800-MHz-band signals. When I bought it I compared it to another receiver from the same manufacturing lot and found them about the same.

Two questions.

(1) Is this a known problem? Is there a recommended fix?

(2) Is a _circuit diagram_ (not just parts list) of the PRO-91 available somewhere?

Thanks,

Michael Covington

Looking to trade for MINT Drake SW8, latest version, in
PERFECT cond. I have to trade the following:

Sony 7600GR w/Sony ps, case, reel antenna, manual, box, two
mos. old
Icom R2, unblocked, box, manual, one mo. old
RS DX-398, case, no ps or manual
Bearcat UBC-3000XLT, ps, very nice case, box, manual, stock
antenna, Watson W881 antenna

All in perfect cond. Will consider trade combinations.
DeWayne KE9K

1289. Nice CHP real-time response call text website

>(1) Is this a known problem? Is there a recommended fix?

Mine, purchased at an estate sale for $1.00 works great (yes, I got the decimal point in the right place). It seems to work as well as my other scanners, 2004, 06 and 895xlt. It's faster scanning than any I have used.
Doesn't the Shack offer a service manual/schematic on their web site?

It can be used for other purposes too... I'm an emergency room nurse
at a Level III trauma center and one day we got a call from an air
ambulance service asking our neuro status because one of their birds
was going to a major, multi-car crash on a freeway in a neighboring
county. I went to a computer in our ER with internet access to look
what the CHP CAD website had to say about it. That crash wasn't what
cought my eye.... what caught my eye was a new incident, 3-4 miles
from the hospital was a vehicle roll-over, down a 15 foot embankment,
major injuries with victems trapped. I called our local ambulance
dispatch center and they said they were just dispatching a few
ambulances to this crash. This heads-up allowed us to move minor
patients out of our trauma suite and prepare for what was to come.
Thankfully the helicopter from the first incident didn't transport to
us... we were busy enough with our local incident.

> They offer a parts list but no schematic.
>Curious...

It's strange. There are two different Pro 91s, a 20-521 and a 20-521a (mine is the a). The parts list for the 521a gives a service manual, numbers 12093035 and m52000521. What's really strange is that the parts list for the 521a discribes it as a 300 ch scanner, my 521a is only 150 ch and I have never seen a Pro91 with 300 ch so suspect this is just a misprint.

I'll bet if you call them you will find that there is a service manual/schematic for your scanner.

Has any body tried this one on the 895xlt.

Subject: bc890xlt-800mhz full restore

1. remove all cabinet screws.
2. remove 4 face plate screws and 1 bracket screw at center of main board.
3. carefully depress the outside edges of faceplate shield and tilt down.
4. unplug j4 and j5 and ribbon connectors j501 j502 and j503.
5. remove faceplate and logic board.
6. position board so microprossoe chip is on left and memory battery on
right.
7. locate the 3 chip resistors at chips upper right..marked 104 and
carefully desolder.
8. install the chip resistor at the 2 empty pads closest to memory battery.
9. reassemble carefully in reverse order.
10. test by entering freq. around 870 mhz.

Does anyone know when this receiver was first introduced to the market ?
Also, was this the first "programmable" scanning radio ?
After looking at a picture of one on a website, I just realized that
this is what my dad had some 25 years ago. I believe it used some kind
of metal combs or cards to program it. Seems like a wild design to me. I
assume these are collectors items now. Well, thanks for the help.

Chad

Sounds good, but most likely bogus! I have NEVER seen, or heard of a mod to open up the 800MHz band on the BC895-XLT. Even Bandercom, who sells unblocked versions of Uniden Bearcat scanners, to my knowledge, never had an un-blocked BC895-XLT.

You have to be careful, as there are many post regarding mods for scanners that will turn a perfectly good scanner into a nice paper weight.

I use the MaxScan1000 from Maxrad antennas. It works great on all the bands that you mentioned, is low profile (maybe 18" with a center coil) and looks great on the roof of my truck.

How long of a run do you have between the radio and antenna?

I would recommend Times microwave LMR-400 if you want the closest thing to hardline at coax cost. :-) OTOH if you aren't out to capture every last electron possible just great solid local reception I would go with some RG6 double or triple shield. Not quite as good as the LMR stuff but far better, hands down than RG8. I use both and have dumped the RG8 crud forever.

Glenn

1315. Difference in Pro-91 and Pro-91a

Not unless you convert the laptop into a radio. It can be "connected to" a radio and made to decrypt MDT messages. Not legal but it can be done. Look for a program called "MDT Monitor".

At our station we have a "Media CAD" which is a direct connection to the CHP mainframe that does not go through the internet. It also allows us to send/receive messages from the Traffic Management Center.

If you hear the station mention something that's not there, it probably means that the log hasn't been updated but CHP Dispatch. Although to the untrained eye, it might appear as if the Traffic Reporter doesn't know what he/she is talking about. I assure that is usually not the case.

As suggested, you'll want to get another antenna for low freq reception. The "rubber duck" antennas that cone with the scanners are of almost no use at the lower freq's. Try the $9.95 telescopic antenna at Radio Shack.

Also, I'm not sure which CHP division you're in but here's the whole state...

http://www.latraffic.org/radioman/chp/chp.html

Have fun!

Below is a copy of an e-mail (they actually sent me the same message 5 times, one to each account I have!....is that spam???) If I am in violation of any policies in rec.radio.swap, or rec.radio.swap please let me know. (instead of just whining to my ISP) The only thing I did different in the post below was promote three of my auctions. Is this wrong? Let me know.

Thanks,
Adam / kc7ljq

Forgot to quote what @ Home sent me:

We're sending this message to you in response to many complaints
regarding off-charter and/or commercial Usenet postings (Subject: FA: 2
lots / Uniden BCT7 BearTracker 100 Chnl Scanner 3day) sent from your
@Home account. This behavior is in violation of the @Home Acceptable Use
Policy and future reports of this activity could result in termination
of your @Home services. If you would like further information about the
@Home AUP, it is posted at http://www.home.net/aup. The relevant section
is quoted below. We will also mail you a hard copy of this
communication. Thank you for your cooperation.

The @Home Network AUP Management Team

Newsgroups

Messages posted to newsgroups must comply with the written charters or
FAQs for those newsgroups. Advertisements, solicitations, or other
commercial messages should be posted only in those newsgroups whose
charters or FAQs explicitly permit them. You are responsible for
determining the policies of a given newsgroup before posting to it.

Posting or cross-posting the same or substantially similar messages to
more than 9 newsgroups is prohibited. Our news software will
automatically cancel any messages posted to nine or more newsgroups.

Forging, altering or removing header information is prohibited. This
includes attempting to circumvent the approval process for posting to a
moderated newsgroup.

1328. Re: UPR 6.900 USB back on the air?!

Newsgroup: rec.radio.scanner
Date: 2001-07-03 17:44:42 UTC
From: mtgx@4motion.org
Message-ID: <7002fc78.0107030944.685ad600@posting.google.com>
Source record: 63345
Cross-posted to: alt.radio.scanner.flame_fest,rec.radio.scanner,rec.radio.shortwave

Search the newsgroup for "United Patriot Radio". You'll see that I posted logs of UPR for at least two nights worth of broadcasts last week (week of 6/25). This was after Anderson announced he was voluntarily shutting down the station. Then there was a rumor circulated that he was busted by the FCC on either 6/26 or 6/27; this rumor I believe made it as far as Glenn Hauser's show; however, UPR continued to broadcast AFTER the purported bust. The bottom line here seems to be that UPR is NOT off the air; my feeling is that the voluntary shutdowns and rumored busts are concocted in order to keep listeners on their toes and maybe keep the operator of the station from getting bored. His broadcasts are becoming more sporadic, which also support this theory.

Cheers,
Miles

Page 411 and 412 of Police Call list 2 Systems:
800 Trunked and 900 Trunked.

A Trunk Tracker will be needed to sort through the mass of chatter on the air.

200-4 Grand Floridian
400-1 Magic Kingdom, Fort Wilderness and Grand Floridian Security (Mike 1)

There is about 80 Frequencies listed, I regret that I do not have them on my machine to send, but there is time to grab a copy of Police Call or the CD Rom.

Also try Scanning the FRS Frequencies, I was just there and always use my extra Talkabout 250 on Scan to hear whats going on with visitors.

Safe trip,

AM/FM and WBFM (Radio Stations) are 3 different animals.

Most Scanners will work AM (Air) and FM (Walkie Talkies) but WBFM (Radio
Stations) are not always featured, less so on older units.

Source record: 63402

I picked up the above scanner for $1.00 at a flea market, and it needs repair. The keyboard/display seems to be working, but only noise is coming out checking it against an operational receiver on the 2m band. The local RS store wants about $40.00 for the service manual that I find a bit excessive.
Could someone please help me out with the schematics and possibly with alignment instructions?

Thanks, Peter

The simple promoting of an auction on a for-sale/trade type newsgroup (of which only ONE of the two groups to which this thread cross-posts is) is not wrong. However, there is a missing element here: The original title.

For an auction notice NOT to be treated as spam, there are generally two conditions that the consensus of those who frequent the for-sale/trade newsgroups seem to agree on:

1) The title/subject of the post must indicate that it is an auction. This means that either it starts "FA:" or contains the word auction in it. It is insufficient to merely leave the auction indicator for the body of the post.

2) It should be posted INFREQUENTLY - generally once when the auction opens, and once just before it closes (usually, "X hours left" accompanies those). If the auction is a week or more long, then one additional post at the midpoint may be acceptable. However, once per day or more often seem to cross the line into spam.

Auctions should NEVER be promoted via e-mail - with one exception: A copy of an auction of an item may be sent in RESPONSE to a recent newsgroup post seeking the same item. (Recent means less than one week.)

If my understanding of the above is flawed or incomplete in any way, I'm certain that others will fill in.

1337. Scanning Over the Holiday?

Newsgroup: rec.radio.scanner
Date: 2001-07-03 19:19:45 UTC
From: - <psleprob@hotmail.com>
Message-ID: <3B421A96.3F8A7291@hotmail.com>
Source record: 63404
Cross-posted to: rec.radio.scanner,alt.radio.scanner

If you are traveling over the holidays and plan to take your scanner with you, check out the 25+ preprogrammed scanner files that you can access off of the 245xlt Resource Page. Even if you don't have a 245xlt, this has excellent documentation files that will help you program another type of scanner. Using the FREEware utilities (link provided at the site), you can reprogram a 245xlt scanner for a new location in about a minute (from start to finish), and just as importantly, reprogram it back to its "home" configuration in the same amount of time when you get home!

The database is slowly increasing due to the efforts of a few of our fellow 245xlt enthusiasts. If you haven't checked out the database in a while, things have probably changed a bit.

http://home.earthlink.net/~dougfisher/scanner.html

IF YOU DON'T SEE YOUR HOME CITY OR YOUR VACATION DESTINATION LISTED, PLEASE SUBMIT YOUR SCANNER'S DATA FILE SO THAT OTHERS CAN BENEFIT FROM YOUR EFFORTS!!!

Happy "Fourth" to everyone,
Doug

1339. try this out

Newsgroup: rec.radio.scanner
Date: 2001-07-03 21:31:53 UTC
From: current_gothic@sympatico.ca
Message-ID: <3b4239aa.12196469@news1.on.sympatico.ca>
Source record: 63406

A little while back, I was browsing through news groups, just like you
are
now,
and came across an article to this that said you
could make thousands of dollars within weeks with only an initial
investment
of
$6.00! So I thought," Yeah, right, this must be a
scam", but like most of us, I was curious, so I kept reading. Anyway,
it
said
that you send $1.00 to each of the 6 names and
address stated in the article. You then place your own name and
address in
the
bottom of the list at #6, and post the article in at
least 200 news groups. (There are thousands) No catch, that was it. So
after
thinking it over, and talking to a few people first, I
thought about trying it. I figured what have I got to lose except 6
stamps
and
$6.00, right? Like most of us I was a skeptical and
a little worried about the legal aspects of it all. So I checked it
out with
the U.S. Post Office (1-800-725-2161) they confirmed
that it is indeed legal! Then I invested the measly $6.00. Well GUESS
WHAT!!...
within 7 days, I started getting money in the
mail! I was shocked! I figured it would end soon, but the money just
kept
coming in. In my first week, I made $25.00. By the
end of the second week I had made a total of over $1,000.00! In the
third
week
I had over $10,000.00 and it's still growing.
This is now my fourth week and I have made a total of just over
$42,000.00
and
it's still coming in rapidly. It's certainly worth
$6.00, and 6 stamps, I have spent more than that on the lottery!! Let
me
tell
you how this works and most importantly, why it

works....also, make sure you print a copy of this article NOW, so you
can
get
the information off of it as you need it. STEP 1:
Get 6 separate pieces of paper and write the following on each piece
of
paper
"PLEASE PUT ME ON YOUR MAILING
LIST." Now get 6 US $1.00 bills and place ONE inside EACH of the 6
pieces of
paper so the bill will not be seen through the
envelope to prevent thievery. Next, place one paper in each of the 6
envelopes
and seal them. You should now have 6 sealed
envelopes, each with a piece of paper stating the above phrase, your
name
and
address, and a $1.00 bill. What you are doing is
creating a service by this. THIS IS ABSOLUTELY LEGAL! Mail the 6
envelopes
to
the following addresses:

1) Snow Raven
94 Prince of Wales Drive
Belleville,Ontario,Canada
K8P2T8

STEP 2: Now take the #1 name off the list that you see above, move the
other
names up (6 becomes 5, 5 becomes 4, etc...)
and add YOUR Name as number 6 on the list. STEP 3: Change anything you
need
to,
but try to keep this article as close to
original as possible. Now, post your amended article to at least 200
news
groups. (I think there are close to 24,000 groups) All
you need is 200, but remember, the more you post, the more money you
make!
---DIRECTIONS -----HOW TO POST TO
NEWSGROUPS---------- Step 1) You do not need to re-type this entire
letter
to
do your own posting. Simply put your
cursor at the beginning of this letter and drag your cursor to the
bottom of
this document, and select 'copy' from the edit menu.
This will copy the entire letter into the computers memory. Step 2)
Open a
blank 'notepad' file and place your cursor at the top

of the blank page. From the 'edit' menu select 'paste'. This will
paste a
copy
of the letter into notepad so that you can add your
name to the list. Step 3) Save your new notepad file as a .txt file.
If you
want to do your postings in different sittings, you'll
always have this file to go back to. Step 4) Use Netscape or Internet
explorer
and try searching for various news groups
(on-line forums, message boards, chat sites, discussions.) Step 5)
Visit
these
message boards and post this article as a new
message by highlighting the text of this letter and selecting paste
from the
edit menu. Fill in the Subject, this will be the header
that everyone sees as they scroll through the list of postings in a
particular
group, click the post message button. You're done
with your first one! Congratulations...THAT'S IT! All you have to do
is jump
to
different news groups and post away, after you
get the hang of it, it will take about 30 seconds for each news group!
**REMEMBER, THE MORE NEWSGROUPS YOU
POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM
OF
200**
That's it!
You will begin receiving money from around the world within days! You
may
eventually want to rent a P.O.Box due to the large
amount of mail you will receive. If you wish to stay anonymous, you
can
invent
a name to use, as long as the postman will
deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.** Now the
WHY
part:
Out of 200 postings,
say I receive only 5 replies (a very low example). So then I made
$5.00 with
my
name at #6 on the letter. Now, each of the 5
persons who just sent me $1.00 make the MINIMUM 200 postings, each
with my
name
at #5 and only 5 persons respond to
each of the original 5, that is another $25.00 for me, now those 25

each
make
200 MINIMUM posts with my name at #4 and
only 5 replies each, I will bring in an additional $125.00! Now, those
125
persons turn around and post the MINIMUM 200
with my name at #3 and only receive 5 replies each, I will make an
additional
$626.00! OK, now here is the fun part, each of
those 625 persons post a MINIMUM 200 letters with my name at #2 and
they
each
only receive 5 replies, that just made me
$3,125.00!!! Those 3,125 persons will all deliver this message to 200
news
groups with my name at #1 and if still 5 persons
per 200 news groups react I will receive $15,625,00! With a original
investment
of only $6.00! AMAZING! When your name
is no longer on the list, you just take the latest posting in the news
groups,
and send out another $6.00 to names on the list,
putting your name at number 6 again. And start posting again. The
thing to
remember is, do you realize that thousands of people
all over the world are joining the Internet and reading these articles
everyday, JUST LIKE YOU are now!! So can you afford
$6.00 and see if it really works?? I think so... People have said,
"what if
the
plan is played out and no one sends you the
money? So what! What are the chances of that happening when there are
tons
of
new honest users and new honest people who
are joining the Internet and news groups everyday and are willing to
give it
a
try? Estimates are at 20,000 to 50,000 new users,
every day, with thousands of those joining the actual Internet.
Remember,
play
FAIRLY and HONESTLY and this will work.

1340. f.s. midland portable radios 30.00US shipped

Newsgroup: rec.radio.scanner
Date: 2001-07-03 21:39:19 UTC
From: JP <brontebear@yahoo.com>
Message-ID: <bYq07.8769$mY2.275609@news1.busy1.on.home.com>
Source record: 63407

forsale:

5 midland portable radios model 70-155b
excellent condition

3 have keypads - 80 channel capable
2 have no keypads - 36 channel capable
synthasized radios , no crystals to buy -
about 20.00 to get programmed by most radioshops

both have scan
transmit/busy led
operate from 138 -174 mhz
these units do not come with batteries

1 have 2 stubby antennas and 1 6" antenna
the first 3 sales get them,

I have 2 heavy duty drop in chargers

i would like 30.00US for each radio
i would like 30.00US for each charger

package deal of cours.

prices include basic insured shipping via
USPS.

I take "international Postal checks"

thanks
tvdude69@home.com

1341. Re: Multiband NMO antenna info?

Newsgroup: rec.radio.scanner
Date: 2001-07-03 21:48:31 UTC
From: webmaster@scanatlanta.com
Message-ID: <3b423ca8.1225546@news.mindspring.com>

Cross-posted to: alt.radio.scanner,rec.radio.scanner

I use a 1/4 wave 800 MHz antenna on my car for my 800 MHz Spectra
radio and it works great all around the Metro Atlanta area (most all
jurisdictions in the Metro area are on /\/\ 800). I can be upwards of
50 miles from the furthest repeater as still receive! The antenna is
small and not very noticible. I figured that if the police/fire/ems
use it, it's got to be good!

Now, if you use your scanner for frequencies other than 800 MHz, that
could be a different story.

1342. Icom R7000 Remote Control

Newsgroup: rec.radio.scanner
Date: 2001-07-03 22:01:29 UTC
From: Bud <Twenty4Pack@Yahoo.Com>
Message-ID: <72f4ktsqgpdccjg44264hsbv8h951o7ji0@4ax.com>
Source record: 63409

Hi,

I bought an R7000 the other day, but it didn't come with an infrared
remote control. I searched using Google & AltaVista for a replacement,
even went to several remote control manufacturer sites. No luck.
Do any of you know if one of the universal remote controls are capable
of operating with the Icom R7000? If so, I'd sure appreciate a reply.

Thanks,
Bud

It's not included with the R7000, it is an option. You might check Ebay
from time, to time. Did you try Icom, to see if any are left? I would say
it's unlikely that the universal ones would work.

The R7000 also needs a circuit board installed for the remote to
function. No board and no remote ever made will work. Still a great
receiver.

Source record: 63417
Cross-posted to: rec.radio.scanner,alt.radio.scanner.uk

I think the police in my country is using some kind of analog scramble transmission. All I can hear is some kind of white noise on my scanner. Very rarely they 'open' and only then I can hear them. I think the police in my country are using Motorola for their radio equipments. Could this be digital instead of analog scrambling ?

Because of this I am thinking of getting the AOR AR 8600 scanner. This scanner has an optional card which is called the VI8200 voice inverter card. This card can descramble certain types of analog transmission. Can I use this in order to hear the police freqs ? If this cannot be done then there is no use for me to get the AOR AR 8600.

Thank You All for the info.

Coast Station.

1352. United Partiot Radio 6.900 back on the air

Newsgroup: rec.radio.scanner
Date: 2001-07-04 01:06:52 UTC
From: gherkin <fpotters2@aol.com>
Message-ID: <M_t07.2230$zg4.242733@newsread2.prod.itd.earthlink.net>
Source record: 63419
Cross-posted to: alt.radio.scanner.flame_fest,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave

It appears that, after a month long hiatus, United
Patriot Radio has returned to the shortwave airwaves.
They are currently transmitting on 6.900 kHz USB with
a moderate strength signal. They started at 7:00 PM
Central Time. It looks like their back to their original
schedule of 3 hours broadcast per night, this being
7:00 to 10:00 PM Central Time. In past the "live" portion
of the show with Col Steve has been from 9:00 to
10:00 PM Central (10:00-11:00 PM EST). The station
is alleged to be in Eastern Kentucky, and is set up as a
Militia type "free radio" outlet. The current debate is if UPR
is either a Clandestine or a Pirate station. The difference
being a Clandestine is on the air for purely a political or
sectarian purpose, wheras a Pirate is more a station set
up purely for the amusement of the operaters and it's listeners.
Regardless of where UPR falls into classification, enjoy it while
it's on the air setting a new milestone for free-radio operation.

end.

1353. How important is trunk tracking?

How important is trunk tracking, as opposed to merely scanning the frequencies of a trunked system? This is in a medium-sized town whose trunked system uses about 6 frequencies.

If it was "voice inversion" scrambling, it would sound somewhat like donald duck, recognizable as a voice, but the words themselves not recognizable.

Digital usually sounds much like white noise.

You can only make that call by knowing how busy the frequencies are.

If there is only one call at a time, either radio will track the call, but the trunktracker will identify the callgroup ID, the regular radio will not.

If more than one frequency is in use at a time, with trunktracking, once the scanner latches on to a call, it will usually stick with that call through completion. But, you will be missing the other calls going on simultaneously.

Without trunktracking, the calls will be scrambled, i.e., you will hear part of one call, then when that portion ends, jump into another call, when that portion ends, jump to yet another, often without hearing any responses to the first call. Of course, if there is a delay between the end of one portion and the response, the same thing can happen with a trunktracker, unless you have it set to only respond to one callgroup ID.

To continue with Applebee's analogy:

Without trunktracking "you will be listening to the police in hot pursuit and next you will pick up two janitors talking about a toilet overflow at the library".

With trunktracking, you may hear the janitors discussing the overflow for 5 minutes and never know the hot pursuit is going on, unless you have locked out the janitors.

UPR in my mind is 100% Clandestine! He speaks purely political and he speaks
what he believes.

I really like what this guy says, does anyone know if he has a website?

It sounded like a pretty reasonable interpretation of the charter and the generally accepted usage in the involved groups to me. What is there about it that you find so unnerving, Bruce? Or are you the one who finds any FA or FS postings so objectionable? Maybe you'd like to post your own interpretation of the rules here ... for the edification of us "less astute" users?

Just to add, to Walt's comment, very little in this country (UK) uses voice inversion, certainly not emergency service transmissions, you can be sure that any scrambled emerg. service transmission in this country cannot be received by scanner users, if that is the only reason to buy the AR8600, then don't.

Since the 7000 requires an optional board for the remote to work simply having a universal remote will be of no use. Sometimes Radioworld sells used ones for $100Cnd. You might also try Universal Radio.

Rather easily, it turns out. It's called frequency translation, and can be accomplished with the usual circuitry.

One form involves producing LSB with a suppressed carrier frequency of around 3 KHz. That produces inverted speech, and is sometimes used as a crude speech scrambling method. :-)

I'm looking to buy a new handheld unit, but all of the RS & Uniden ones I've tried have sick audio !!
My old RS Pro-31 and Regency HX1500 have normal audio that you can turn up and hear, but they don't scan alot of channels. I don't live near any dealers that carry AOR units, do any of thiers have good audio.
The problem is the fact that the RS & Uniden ones don't put out any wattage, as I tried to explain to the stupid person at RS who wanted to sell me an external speaker.
I don't know why all of these manufacturers want to make all of these new units so darn small, I need to hear my scanner when I'm out & about with it.
Any info would be appreciated.

Thanks,
Chad

Source record: 63444

I have an OLD Bearcat BC210 (1970's model) and was wondering a couple of things.

1. What kind of wierd battery does it use to "save" freqs when the power goes out?

2. What kind of DC power cord does it use?

(The impossible part) Where can I find them, or can they be converted to something more current. The scanner is kind of a memoir, as it was my dad's and he passed away a few years ago. He was the one who got me into monitoring about 20 years ago.

Thanks for any help on this one.

Chad

"White noise" does not sound like Analogue speech inversion I'm afraid.

> Because of this I am thinking of getting the AOR AR 8600

The VI-8200 can be used with the AR8200/AR8200-II also.

OK. Assume a 6.900 kHz carrier. USB would put voice in a frequency
range of 7.100-8.500 kHz which is not *ON* 6.900 kHz. So the
question is: How does one generate USB voice *ON* 6.9 kHz?

Any reactions to the Icom IC-Q7A? In particular, how well does it perform as a scanner, and does it have a "skip data channels" mode?

Thanks,
N4TMI

The battery is listed as:

Battery 1.5v (Mallory 10L123)

in the parts list for the BC210. Look for an equivalent at a watch
battery display or at Radio Shack.

The DC power cord, as I remember, is just a wire with a push on
connector. The wire goes to the auto battery plus, and the ground
connection is made by the mounting bracket to the radio chassis and
the car chassis.

Source record: 63354

I used to own a 2021 scanner. The decision to go to AM or FM is based on the band the frequency you enter is located in. You can not alter that, No wideband FM on this radio.

The Pro-34 portable is a repackaged pro-2021 with 800 mhz added.

Pro-2021 tips..
You can add a resistor someplace to speed up scanning (but not up to pro-2005 speeds.
Clipping a diode with make the display say it is scanning 800mhz but it really isn;t. There is no RF circuitry in the box to cover 800mhz.

The backlighting goes dim after awhile just like the 2005/2006.

The cpu chip can sometimes do weird things while scanning. On my 2021 I could not program 2 vhf-lo channels in sequence or the scan rate would drop down to next to nothing. Sticking a vhf-hi freq between 2 vhf low freqs got around this problem.

Nice metal cabinet, slow scan rate. Good for out in the boonies with the cows (like where I am).

Thanks. It's now $139.95 at Ham Radio Outlet and the price is right! The lack of a DTMF keypad would hinder me just a little... I might carry a separate DTMF generator along with it. The main purpose would be to have a working radio in my briefcase at all times, for such things as enabling my wife (KC4UVW) to find me when picking me up at work... also regular listening to NOAA and some local utilities.

The plastic cap got lost on my old BC210 so I went to radio shack and purchased a plastic holder for a single 1.5V AA Cell battery. It works fine for the memory store and lasts a lot longer. It's also a lot cheaper than that watch battery previously required.

From: Adam Conlea <adam85@NOSPAMhotmail.com>
Message-ID: <9i01ae$34n@dispatch.concentric.net>
Source record: 63360

I have the Radio Shack Pro-2017 200-Channel Desktop Scanner. It works for my recreational purposes but would like to extend its reception by purchasing an external antenna. The product documentation says the jack is compatible with a "Motorola-type" antenna, so I was hoping that someone here might have a suggestion. I would like to extend my reception range 50-75 miles. Would this be possible using this unit and an external antenna?

Thanks for your attention.

Adam

> Thanks for your attention.

"Motorola-type" describes the kind of plug; you can easily get an adapter if your antenna ends up having some other kind of plug.

VHF and UHF signals travel in a direct line and do not reflect off the atmosphere the way shortwave signals do. Because the earth is curved, you can't see over the horizon. (Well, not much over the horizon, anyway.)

I had no trouble hearing the ham transmitter on the MIR space station when it was more than 3000 miles from me. Signal strength is not the limiting factor; their transmitter emitted only a few watts but came in loud and clear.

On the ground, long distances are much harder to cover. You need a tall antenna, and the transmitting station also needs to have a tall antenna, in order to overcome the curvature of the earth. If you happen to be on top of a mountain you can probably receive signals 200 miles away (from the tops of other mountains, if nothing taller is in the way). On flat ground, a more practical limit is more like 10 miles.

Glad to be of service!

Here's a more specific example: On ham radio, on the 144-MHz band I can communicate with repeaters on tall towers up to about 50 miles away, but it gets unreliable beyond about 10 miles. Talking to someone in a car with a radio like mine, I can only reach three or four miles, and more power doesn't help. The curvature of the earth and obstacles near the ground get in the way.

1397. Re: Scanner antenna question from newbie

Newsgroup: rec.radio.scanner
Date: 2001-07-04 22:18:35 UTC
From: Walt Bertram <wbertram@worldnet.att.net>
Message-ID: <3B43963A.311B5BF0@worldnet.att.net>
Source record: 63364

The general formula is:

Range (miles) = SquareRoot (2 x Antenna Height (feet))

With a 100 ft antenna height, Range = SqRt(200)=14 miles
With a 1000 ft antenna height, Range = SqRt (2000)=45 miles

Maybe people who THINK they know what they are talking about should learn the distinction between a "moderated" group, an unmoderated group with a charter in the "rec." hierarchy and the "free for all" stuff in the "alt." hierarchy before they shoot their mouths off and demonstrate their abysmal ignorance. The previous poster referred, I believe, to the group's charter. Whether you WISH it didn't have one is immaterial. The charter is of some significance in such matters.

The police channels you're looking for have moved to the Toronto Police trunked radio system. It's a Motorola Type II Smartnet analogue system, so all you need is a trunktracking scanner to monitor them again. The "scanont" mailing list on YahooGroups is a wealth of information and updates on monitoring this trunked system as it takes on the full load of users (there are still some divisions yet to migrate using their old repeater channels). As you discovered, Toronto Fire is also on this trunked system, which is using 800 MHz frequencies recovered from the old police repeater system.

Hope this helps

Greetings;

I work on a ship and I'm looking for a good shortwave radio, the sony 2010 was my probable choice. I'm seeing some of these scanner/receiver combos with ranges from kilo to gigahertz. Do they have the sensitivy/selectivity of the 2010. What's a good make model. I'd like to get one with discriminator output.

Thanks;

Dennis

The combos work great as above 30MHz scanners and are also fine for listening to the big guns on shortwave but I have doubts that they will stand up to a dedicated below 30 MHz shortwave receiver such as the 2010 when you are trying to pull a low power station out of the muck.
I personally use stand alone scanners such as , 2004, 06, Pro-91 and an XLT895 for my scanning and a TenTec RX-320 along with an old National for shortwave.

I strongly suspect the 2010, preferably with a passive antenna tuner added,
will outperform any of the supercompact HF-to-UHF receivers.

1418. CC Super Gainer Antenna

Newsgroup: rec.radio.scanner
Date: 2001-07-05 14:36:36 UTC
From: Paul Crissy <pcrissy@usenm.net>
Message-ID: <Xns90D56AEE07594pcrissyusenmnet@204.127.36.1>
Source record: 63385

The catalog for the C Crane Company lists a ""CC Super Gainer" handheld scanner antenna for sale. It says the following about it:

"Super charge your handheld scanner. The 15.75" CC Super Gainer is more responsive on all bands than any other portable antenna we have tested! 800 MHZ listening is spectacular and low band is improved too." Price is $29.95

Does anyone have any experience with this antenna? I mostly listen on 800 MHZ.

AOR AR8000 Wide-Range Receiver
Covers 500Khz-1900Mhz (continuous)
AM/FM/WFM/USB/LSB/CW
1000 Memory Channels
computer-controllable

Excellent condition. No mods done. This is the original model - you can modify the bandplan with software. Includes manual, charger/ac adapter, and leather case. I do not have a computer interface for it. I just put a brand-new keypad in it, since some of the numbers were starting to rub off.

I will include the old keypad as well. I will also copy all of my favorite AR8000 software, utilities, mods, docs, etc. onto a CD.

Price $350 + shipping

Spectrum inversion (voice inversion) (the simplest kind of analog scrambling) sounds like human voices, distorted. The signal that sounds like white noise is probably the data channel from a trunking system.

1429. So what's up with this Icom R3 thing?

Newsgroup: rec.radio.scanner

I've seen the ads in the mags for the Icom R3, the audio/video scanner thing with the little screen. It looks really "tech-y" and neat, but does it perform as advertised? Can I pickup local TV broadcasts, studio-remote links, amateur sstv and the like? And how does it perform as a regular scanner?

I know some of you out there won't like it and dismiss it as a useless toy, but how about some more objective reviews?

Thanks!

Read a great objective review of the IC-R3 at www.strongsignals.net. And, yes, it can receive all the things you listed, provided they are at or below the 2.4 GHz range.

I am strongly considering buying one, but will probably wait until it's a bit cheaper. Right now an unblocked unit can be purchased from www.bander.com for US$409 (ignore the price shown on the web page).

Most of what C Crane Company is gimmicy and their idea of super gain is
a low quality renamed Radio Shack scanner antenna in which a few coathangers
arranged properly can beat.

Aren't the steps in the cellular range different in the UK?
If your steps are not 30 khz like USA, the scanner will never work right,
always half-way on a frequency, always punching up or down, trying to get
better alignment with the frequency. Not a good idea.

Try both, they don't cost that much. Compare the difference yourself, don't go by what you hear. Also try antennas with high gain, the discone is not a high gain antenna.

You should keep in mind any antenna with gain will suffer from narrow bandwidth. Your gain antenna is hot stuff on a few bands but if you go outside of these bands to any degree it will not function well. A discone though it doesn't exhibit gain will certainly do a crack up job on the WHOLE spectrum. What's a crack up job? Considering most VHF/UHF reception is line of site you don't really need the gain if you have the height and in reality gain will not make up for lack of height.

I agree, if you can buy them both, do it. Put some decent coax on them, mount them as high as you can and have fun.

Glenn

1437. Re: So what's up with this Icom R3 thing?

I like it. It's tv screen came in handy when the power went off recently to get weather updates, then I kept it parked on the police when not watching the weather. The tv does eat up batteries, but I have the rechargable pack, so it's not a big problem to me. The big difference in the R3 is the absence of the direct entry keypad. It uses a different system to enter frequencies, when I got used to it, it's not hard at all. I haven't received any video links or amateur tv on it yet, I don't seem to live near anything like that. Picks up cordless phones the nuts, and gets images of cell phones.

The history behind this is based upon the Saber 1E radio. it had 2 zones of 12 channels apiece. originally fire was in zone 1, and police were in zone 2. a dab of blue paint denoted zone 2.
as Phoenix fire took on more departments, they needed more room. so they began moving some of the police channels(blue) off the fire radios. (the police had there own radios, and never noticed.) , in a nut shell, thats the story as i remember it.

Message-ID: <Xns90D6813FAF5FIDTAA001@131.215.139.43>
Source record: 63256

Talk about a blast from the past, right?

I've looked at my junk drawer & it looks like I have enough parts that I can throw a CE-232 interface together for my old 2006 for what amounts to pocket change. I have a copy of Cheek's third book, but am interested at glancing at the original manual and software for the interface.

Apparently, back in the day, these were available free from the author and from various sources on FidoNet.

I've searched on google and deja and multiple ftp sites, but can't seem to find this stuff on the internet.

Someone on this group must have them. If so, can they be passed along to me?

Thanks in advance!
Carl Eb

1446. BC245XLT charging problem

Newsgroup: rec.radio.scanner
Date: 2001-07-06 17:30:24 UTC
From: mloewen@cac.psu.edu
Message-ID: <9i4sjg$17d8@r02n01.cac.psu.edu>
Source record: 63263

I have a BC245XLT that was bought almost 2 years ago, so is well out of warranty. It has suddenly decided to quit charging the internal pack, with either of 2 different battery packs or power sources.

Is there a common point of failure that might be repaired without too much difficulty, or is this a case for return to the factory?

For maximum coverage and enjoyment in monitoring, the use of
top quality outdoor antenna and coax cable is extremely important.
Another thing is the location of your base station. If you live at a
place surrounded by hills/mountains or tall buildings, then nothing
much can be done. You're in luck if you live in flatlands like the
prairie of America.

Try using top quality antenna like the Scantenna or Diamond
D130J. For coax cable, use top quality coax like Belden 9913, LMR-400
or better. Don't forget to use top quality connector too like
Amphenol. I use N connectors for my coax because I monitor a lot in
the 900Mhz spectrum. For maximum weatherproofing use coax seal for
outdoor connectors.

Try to install your antenna at the highest point of your base
station. If possible use the shortest length of coax cable to reduce
signal loss at the very minimum. Earth your scanner if possible to
avoid antenna static buildup that can damage your scanner.

Antenna system is of paramount importance. Many people make the
mistake of spending so much on high end scanners while building
cheap/low quality antenna systems. The spending ratio should be 50:50.
If you have a thousand bucks to spend on the monitoring hobby, you
should spend 500 dollars on the scanner equipment and the other half
on antenna system. The figure is just an example as to show the
extremely importance of top quality antenna systems.

Coast Station.

My advice is to try buying the external battery charger that came with
the 235.
You can buy this along with a new BP for around 30 bucks I bet.
This will take care of your charge problem and replace your BPs if
they went bad. I'm not sure what the model # of the charger/package
is. Check www.uniden.com or your favorite dealer. I never use my 235
or 245 radio to charge. Why tie up your radios?

BTW, This years PSU football team will make last years team look good.

1450. Intermod in the 160mhz??

Newsgroup: rec.radio.scanner
Date: 2001-07-07 00:26:25 UTC
From: beehunter1@webtv.net
Message-ID: <9525-3B465731-60@storefull-125.iap.bryant.webtv.net>
Source record: 63267

I believe what I am hearing is called intermod.
I get very severe bleedover of pagers and NOAA weather broadcasts all
the time between 160mhz and 162mhz on my Uniden BC230XLT handheld unit,
other than that this is a great scanner for my needs.
I don't have this problem with my older Electra base models or my
Regency HX1500 portable at all.
Does anyone have a fix for this?
I would appreicate knowing why this unit does this and the others don't.
Thanks in advance for insight to this problem.

Thanks,
Chad

From the lack of anwers over the past couple of days, the anwer
appears to be no.

However... Interested in testing a program? Back in December I wrote
one for a friend when he was in town for a couple of days. Never did
hear back on whether he ever used it.

It's a command line program that runs under Windows, and uses the
PC/clone cable that comes with the scanner.

E-mail me if you'd like to give it a shot. Address in the header is
munged. Real e-mail is kplotkin at clark dot net.

Testing may go slowly since I don't have acess to a sc200, and I'm
juggling a bunch of other things. But if the program reaches a useful
state, I'll set it loose as careware.

CTCSS is a sub-audible code. When a radio transmits, most of the time they send this sub-tone with the audio, to activate a receiver. The Pro-92 has CTCSS, and it will not only decode which CTCSS (known also as PL), but use it to control the squelch for any given channel.

Cross-posted to: rec.radio.swap,rec.radio.scanner

Extremely clean Kenwood RZ-1 receiver, scans 500 kHz to 905 MHz complete with no gaps and works great. Receives AM, FM narrowband, FM wideband, FM stereo, Television (with NTSC video output on the back) and has about 100 memories.

Radio is DIN sized to fit in a standard automobile dashboard opening if you wish.

Receiver is cosmetically in beautiful condition.

This one is best offer over $300 plus shipping from 92870

Thanks

John

The Continuous Tone Coded Squelch System sends a subaudible sound along with the transmission. Radio receivers can "hear" these tones, even though we can't. So, if a frequency is used by many groups of people, each group can use a separate tone & the receivers set for a tone won't play back all the other garbage on the frequency.

So, when you have it on, you actually hear LESS than if you don't use it. A number of receivers and mods will allow you to use it, though. You may want to listen only to what one of those groups is broadcasting & not listen to what everyone else is sending.

No need to worry. That's what I already had in mind. I figured they
were just reading straight from CAD and that CAD's info wasn't exactly
current.

To whom it may concern:

Why search mode when you have the specific frequencies at your
fingertips. The FCC online frequency database, the best "there's a
scanner frequency available for everthing under the sun" search engine
available in these United Biscuits, to we
the taxpayers, and the rest of the world at:

http://svartifoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

or alternatively at:
http://svartifoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

The FCC database has it ALL!!!
NEVER GIVE UP UNTIL YOU SEARCH THE FCC DATABASE!!!

To learn how to decipher the information you find there...
go here:
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/help/cueopen3.htm

Regards & happy scanning,
Sean

Ok, I have a general idea WHAT an SWR meter is and what it measures, but am looking for recommedations on where to find more info on that and more importantly, how and why to use one. (If you have the time and the knowledge to write me up a short instructional, great, but wouldn't ask anyone for that.) Having a heckuva time finding info on the Net. (Try typing in "SWR meter" to Yahoo or "How do I use an SWR meter?" into Ask.Com and see what comes back! ;-)
At any rate, Links? Books? White papers?

much thanks!
cbert

well chris
SWR stands for standing wave ratio it basically measures the mismatched impedance between your fedline and your antenna and your radio
the radio is looking for 50 ohms and your feed line in most cases is 50 ohm your antennas in theory should be 50 ohms as well to give you a 1:1 match but that seldom happens
i think if you want to learn more you should pick up the ARRL handbook it is chuck full of all that techonbable that as a new ham you are unfamiliar with
good luck

Message-ID: <eaJ17.87682$2W4.13171280@news02.optonline.net>
Source record: 63292

Jason,

On receivers equipped with CTCSS decoding, a continuous tone "added" to the audio by the other station's transmitter can be detected and can serve as a sort of switch to open the squelch or enable transmission on a repeater if it is present. Most amateur radio and police repeaters use CTCSS to eliminate false keying of the transmitters caused by interfering stations. The Family Radio Service (FRS) radios also use CTCSS (sometimes called "privacy codes") to give the operators the false sense of security that their transmissions are not being overheard or to give the impression to layman users that there are actually many more channels available, neither of which is the truth.

Actually, the standard tones used by the CTCSS system ARE audible. If you are listening to a scanner and receive a signal from a ham repeater or local police, for example, you may hear a low continuous sine wave tone or "hum" along with the voice. That is what CTCSS sounds like when it is not filtered out by a receiver that is capable of decoding it, like a typical scanner without the CTCSS feature. On a receiver with CTCSS capability, the tone is deliberately removed from the audio.

There are 42 standard tones as defined by the EIA (Electronics Industries Assoc.) ranging from 67.0 to 254.1 Hz--all in the audible range, but often the lower tones are difficult to distinguish or may be attenuated by the audio amplifier stage in your receiver.

Try doing your search on "VSWR".
Voltage Standing Wave Ratio is the correct name for the concept.

Dear Old Wife Walt,

There you go again, setting a novice off on the wrong foot and likely to seriously damage his ideas of the whole important subject of transmission lines for the remainder of his amateur radio career.

SWR, VSWR and ISWR are equally valid terms to use.

The best you can do is depart from this thread before you do any more damage and allow things, hopefully, to get back on course.

Reg, G4FGQ.

Hi Chris,

For starters download from website below, program SWRMETER. One small file. Not zipped up. Download in a few seconds. Run immediately.

Program SWRMETER models the operation of the common or garden SWR meter. There is a circuit diagram of the bare essentials with a few explanatory notes. Just get used to the idea of working with numbers. After all, all meters indicate the measured quantity in terms of numbers.

The important thing to note is that the meter does NOT measure SWR. It only indicates what the SWR might be on a transmission line between the meter and the transmitter if such a line existed and was of the correct line impedance Zo. The concept of SWR, whether it be VSWR or ISWR, is not of great consequence as you may eventually learn. So what it actually means can be put aside for a short while and allow you to concentrate on what really matters and what the meter really indicates. It is of some importance. At the present state of the art the meter cannot be dispensed with.

The usual radio transmitter has been designed to perform best when it is loaded with a pure resistance of 50 ohms. It does not have to be exactly 50 ohms. It can be anywhere within the range 30 to 75 ohms. Outside this range there is the possibility of the transmitter's output transistors being damaged.

So modern tramitters have a built in safety mechanism. The power output is automatically turned down if the resistive load is outside the range of about 30 to 75 ohms. Sometimes it may be outside the range 25 to 100 ohms but the exact figures are not important. The operator can do nothing about it except keep the transmitter load not too far from 50 ohms.

If too far from 50 ohms the transmitter may blow-up or to protect itself it will automatically shut down its output power. Either of these possibilties is highly undesrable.

There is an adjustable "Antenna Tuner" between the antenna feedline and the transmitter. Its principal purpose is to transform the impedance looking into feedline to 50 ohms, or to whatever other value is required by the transmitter.

The so-called SWR meter is inserted between the antenna tuner and the transmitter.

THE METER'S SOLE PURPOSE IS TO MONITOR THE VALUE OF THE LOAD RESISTANCE PRESENTED TO THE TRANSMITTER. WHEN THE METER NEEDLE HAS ZERO DEFLECTION THE TRANSMITTER LOAD RESISTANCE IS VERY NEAR TO THE DESIGN VALUE OF 50 OHMS.

When the meter needle deflection is not exactly zero it will not indicate how far the load resistance departs from 50 ohms. But don't worry about it. If the meter delflection is near the left hand side of the scale then all is well.

Now Chris, having, I hope, got you on the right track about the true purpose of the so-called SWR meter, it may be safe to turn you over to the old wives to hear what THEIR bafflegab is all about.

By the way, if anyone should mention 'conjugate match' move immediately to the next thread. Or put a block on the phrase.

Reg, G4FGQ

1487. newbie question

Source record: 63202

Hi all,

I am a complete novice. My requirement is to search for low frequency
(20...100 Hz) signal content over a wide RF spectrum (100kHz up).
As fas as I read so far I need to look at tapping the discriminator out
(or purchase a scanner with this feature provided).
The output then is fed to the sound card's line input for further
processing.

What I need the scanner to do:
search for a carrier, stop, listen to the signal for a few seconds and
then continue searching for the next carrier.
The listening time should be variable.

Question:
can something like this be easily implemented with any scanner, do I
need PC control of the search function?

Your help would be truly appreciated.
cheers, Peter.

Reg,

Hmm, still looking for the website you promised, but forgot to include
in your post.

>
> For starters download from website below, program SWRMETER. One
> small file. Not zipped up. Download in a few seconds. Run
> immediately.
>

In spite of what you state in your post, the VSWR is extremely
important if you are running a high power transmitter. But I am sure
you are aware of that. Since our novice friend is unlikely to be
running a high power transmitter, we can leave that discussion for
later.

But you could have simply said:

"The SWR meter gives an indication of the power reflected from the
load (antenna). If the SWR meter has a high reading, a lot of the
transmitter power is not going into the antenna. If the SWR meter has
a low reading, most of the transmitter power is going into the
antenna."

Now, is that "old wives" bafflegab?

Cheers

Walt

Even that is somewhat misleading. The reality is you want the meter as close to the antenna as possible. The feed line is not lossless, so if I connect a transmitter to 1000 feet of RG8 with a dead short on the end, and put the meter at the transmitter end of the transmission line, it may show a very low VSWR because the reflected power is in fact being eaten up in the 1000 feet of transmission line!

Admittedly this is an extreme example, but if the loss is 3 db per 100 feet, and your antenna is at the end of 100 feet of cable and the transmitter and VSWR meter are at the other end, the meter would under report the VSWR as a result of the 3db loss in the line.

Yes. All of it.

For what it means it may just as well be written in ancient Babylonian. What on earth has it got to do with the essential job of providing the transmitter with a purely resistive load of 50 ohms. ;o)

==========
Hi, fella. Welcome to the fraternity.

It is essential your very first ideas on the subject should be
clear, unambiguous and, above all, correct.

(1) The so-called SWR meter is nothing more than 3 of the 4 arms of
a simple 4-arm AC resistance bridge.

(2) The bridge signal source is the transmitter itself.

(3) Three of the bridge arms are fixed. And so, therefore, the
bridge ratio must also be fixed.

(4) The fourth, external, bridge arm is the transmitter load
impedance. It is the only variable arm. It is varied by adjusting
the knobs on the antenna tuning unit.

(5) Only when the load impedance presented to the transmitter is
exactly a pure resistance of 50 ohms is the bridge balanced.

(6) The moving coil meter deflection is proportional to the bridge
unbalance voltage.

(7) When the meter has zero deflection the transmitter is correctly
loaded with a pure resistance of 50 ohms.

(8) So the function of the meter, the reason for its existence, is
to INDICATE either the Tx load is the correct value, or it is NOT
the correct value. It doesn't actually measure anything. Anything
else may be interesting to discuss but exists only in the
imagination.

I sincerely hope I have helped to set you off on the right foot.

Program SWRMETER models operation of the bridge. Download in a few
seconds. But you will learn faster simply by twiddling real tuner
knobs while watching the meter needle.

What is the big deal with the RS Pro-51?? So many people on some of the message boards want to trade off newer equipment for one of these. The mods are not all that big of deal according to some web sites as they only give "test" mods...any input??

Hello,

I have a Yaesu FT-470 dual band H/T, (original owner), in very good mechanical and cosmetic condition. The radio will be shipped with the following:
- original owners manual
- W&W 7.2v 1200mAH battery
- Yaesu NC-29 Quick Charger w/ trickle charge mod.

I am looking to trade this setup for either a Grundig Satellit 700, a high-end VHF/UHF scanner or I will sell for $300.00.

Please e-mail me direct if interested and thank you for taking the time to read this post.

John Schneider, KB2COP

Source record: 63227

Actually, the PRO-92 is a hand-held. Radio Shack (GRE) also has a mobile version of the PRO-92, it's the PRO-2067, which may use as a base. Radio Shack will have a newer version of the PRO-92, and an actual base version of the PRO-2067, out very soon!

1514. Scanner sensitivity variations

Newsgroup: rec.radio.scanner
Date: 2001-07-08 18:17:52 UTC
From: "V.A.S" <valair@btinternet.com>
Message-ID: <9ia83o$ql8$1@uranium.btinternet.com>
Source record: 63230

Hi
On the subject of Scanner sensitivity it has prompted me to write in and state my case.
I recently purchased a brand new Yupi MVT-7100 and was really looking forward to receiving it in the post. I read so many wonderful reviews on this radio I must of read a dozen or so send-ups on this mvt7100.
Anyway, it finally arrived, My initial response was, "what a cheap looking load of junk this looks" I was not impressed by the plasticky look and feel of this radio at all. Still I thought the proof of the pudding etc etc and gave it a try.
I was right the first time WHAT A LOAD OF CRAP It has got to be the worst radio I have ever had the misfortune to own. I have never in all my 22 years as a radio enthusiast come across anything as pathetic as this pile of crap.
I took it back to the shop but all they would say that it was fine and there was nothing wrong with it. I even e-mailed Yupi in Japan and complained but to no avail.
How the hell people can give this *pathetic toy* a good review is ridiculous. All I can say is, if you think this mvt-7100 is a good scanner, then you obviously don't know very much about the things or you have never had a decent radio to compare it against. I suppose its not band for aeroplanes, but then again so is a steepletone that costs about £25.00p
I sold mine on, sod-it, glad to see the back of the junk.
regards
V

From: "Peter O. Brackett" <ab4bc@ix.netcom.com>
Message-ID: <9iafnf$929$1@slb2.atl.mindspring.net>
Source record: 63235
Cross-posted to: alt.radio.scanner,rec.radio.amateur.antenna,rec.radio.scanner

In support of Reg's wise and lucid comments...

The typical ham radio (V)SWR meter is a simple voltage reading instrument that indicates on its' meter a null voltage (zero value) when it's internal impedance measurement bridge circuitry has been presented with an impedance (load) that exactly matches it's internal reference impedance (50 Ohms resistive).

Nothing more nothing less.

In most typical ham applications such meters have little or no relationship to so-called "standing waves".

It is entirely misleading by the ham radio accessory industry to "label" the meters as "SWR Meters". However misleading this terminology might be, this is what has come to be the accepted label for such an istrument. This is the point that Reg is making.

That naming convention ("SWR Meter") has been around, and misused, for so long that many take it to be fact. i.e. many think that such meters are measuring "standing waves". They are not! Some or most of these instruments are also labeled as "Power Meters" although they are not power meters. In actuality they measure a voltage which is indicative of samples of line voltage and current as modified by their internal bridge circuitry.

All this being said however, "SWR Meters" are still useful little instrument (Although more expensive than need e! Perhaps that's the reason for the fancy names, a rationale for a higher price!) since they indicate when a variable load (Say an antenna "tuned" by a "tuner".) has been adjusted to present a value of 50 Ohms to the transmitter. This null reading on the "SWR Meter" does not mean that the antenna impedance or the impedance at the end of the antenna feedline is 50 Ohms. It does not indicate if standing waves are present or not. The "null" reading on the meter only means that the impedance as seen looking towards the antenna, through the tuner inputs which is at the output port of the "SWR Meter", has been adjusted to be 50 Ohms by the tuner's variable controls.

Listen carefully to Reg and explore his WWW site, especially the program on SWR meters, Reg "tells it like it is"!

Folks,

I am an apartment dweller, and am looking for a dependable,
sensitive, transmit/receive antenna that will function on 70cm, 1.25m,
2m, and 6m - that I can fit either in my spare bedroom, or on my
second-floor porch (10' x 5' x 8' high).

Any suggestions?

Thanks,

gee, you see people always wantinga800 Mhz scanner. If someone wants the old 800 Mhz analog system to listen to. it is easier just to get a canadian/eur/aus model.or damnwhynot just get a cell phone. throw it in test mode and receive all the analog signals anyways. simple and most ofus have those old phones too.

1523. Re: 1350 to 1400 Mhz

most scanners that receive thathigh, yaesu, icom sometimes pickup the 800 Mhz cells or the 900 Mhz cordlesses. it usually is just a image. get a second radio and see if you hear it on that radio. if you don't it IS a image of the 800/900 Mhz area. do some math on the IF and see if it matches to the 800 Mhz area. if it does. then it IS a image.

Uniden 60, 220, 9000, 940,045
Standard 220
Sony 7600, Air 7
Yaesu 1901, 7700
Yupiteru 8000,7100

Quality varies enormously!!!

As far as reception with the same antenna is concerned - they are all the same! Please prove me wrong and I will replace the lot.
Anyone who claims their unit their unit receives "better than brand xxx" is talking !#&%^^.
The same argument applies to fuel, TV reception etc. If it was possible to improve anything, then a manufacturer would take advantage and make a killing.

That depends on the boundary conditions. If the ham application consists
of 50 ohm coax feeding a dipole, then the 50 ohm SWR meter is indeed related
to the actual "standing waves". I can furnish the math if necessary.

I am certain that Reg can field this one with no help from me.

But, consider what you are saying and apply it to this situation:

I use a non-resonant flat-top wire antenna fed with ladderline. On some bands, the SWR in the line is 10:1 or even more. Yet, considering the overall loss in the line, probably 90% or more of the power entering the line is being delivered to and radiated by the antenna. How can this be happening if a high SWR means that little power is reaching the antenna?

What doesn't sound right here?

To confound the issue further, I can adjust my "antenna tuner" for a correct setting without using an SWR meter at all!

I just connect my AEA/Tempo Complex Impedance Analyzer/High-Frequency unit (CIA/HF) to the coax input to the tuner that would be connected to the transmitter.

With the CIA/HF adjusted to display in tabular form the resistance and reactance of the impedance it sees looking "into" the input terminal of the tuner (from the transmitter's viewpoint!), I simply adjust the tuner controls until I get the best possible set of values for 50 ohms resistance and 0 ohms reactance. Works every time.

Now, it so happens, that the neat tabular display on the CIA/HF also shows the SWR, the return loss, and a lot of other information. I can even press a couple of buttons and plot the SWR or Z or R or X or angle, etc. vs frequency to see how things look at frequencies other than what I have already chosen to use.

But, the key point is that I can satisfy the load requirements of the transmitter (50 ohms resistive) without ever thinking about SWR or using an SWR meter.

Besides, this way I don't have to bother my head about "reflected power." Some people get all excited over that, you know! And don't even mention "standing waves" . . .

By the way, as I used to tell the class back when I was teaching radar to Texas Instruments' engineers, folks tend to use "VSWR" since it is "cooler" to say "Vizwar" than to use ISWR which would have to be spoken as "Izwar."

Peter, you can appreciate the BAF aspects of this important distinction, can't you?

I've got a set like that. I just took out the 300 Ohm twin lead and
soldered coax directly to each leg. Makes a great travel scanner
antenna since the ears are telescopic. Really only good for indoor
use though.

Or connect the twinlead from the rabbit ears to a 300 ohm to coax converter, and get a BNC to Type-F (coax) converter, and plug them together and then into the scanner. Both parts available at Radio Shack.

Thanks! I'm going to forward that to my friend. That way I can
abandon the program I started. :-)

BTW - they want $20 for a downloaded version, $25 for a CD. Having
written software for two models of scanner (2 1/2 counting what I did
for the SC200), that's a good deal. Assuming it works. :-)

30Khz steps were not enabled on the UK/non US version however as with
the US cellular coverage they were enabled/disabled via one Diode so the
configuration of the diodes was set for each market area.

30kHz steps though when enabled were still not a selectable step size
across the frequency coverage. They are only available by default when
entering US cellular frequencies.

==========

Cecil,

On the subject of SWR meters, SWR's, forward power, backward power, reflections, etc., your conclusions all depend on strings of 'if's' and 'then's'.

If this, if that, if the other!

Each 'if' statement attempts to draw inferences from its predecessors. But 'If's' inevitably lead us into a world of alternatives, uncertainty, imagination, and eventually into the dark occult realms of 'conjugate matches' and 'virtual short circuits'.

Stick to the simple fact - the purpose of the so-called SWR meter in its location next to the transmitter is to indicate whether the transmitter load is R, or it is not R. No more, no less. R can be whatever value your transmitter fancies.

The same indication can be obtained with the brightness of a pea-lamp. Or for blind people the loudness of a tone.

Now how do you relate pea lamps to standing waves without using an 'if''? ;o)

Reg.

Works even better if you mount it on a wall or door and use it as a vertical
dipole. Just adjust the "ears" to length for the desired band.

Good question. The keyboard trick is of limited usefullness vs full cellular
capability of earlier models. Not a particularily fast or high-capacity
scanner. Yet, I see these going on eBay for $150. Go figure.

That's the way I use it. You can wrap a rubber band around one leg
and hang it on a tack on the wall.

Hello!

I am looking for asignment table for frequencies used in UHF Sea radios,
e.g. channel 16 is 156.800 MHz but which frequencies are the other ones.

Peter

Almost all conclusions depend on strings of 'if's', Reg. If you
use an analog Simpson to measure screen grid voltage, then the
measurement will be in error. Knowing when the SWR meter is
reading the actual SWR is useful for calculating coax losses.

Try the following Link:

http://www.flash.net/~av8tor/radios/marine.htm

Well explained there.

Yes, PB Scanner has it posted to; but we are not allowed to post Links to
Expage on our own... go figure. We will make updates to our Pages on CompuServe
to show these ASAP.

1560. NYC DOITT frequencies

Newsgroup: rec.radio.scanner
Date: 2001-07-09 22:38:51 UTC
From: TheF16Falcon <thef16falcon@si.rr.com>
Message-ID: <%nq27.5991$SS5.706377@typhoon.nyc.rr.com>
Source record: 63175

Hi. Anyone out there a NYC scannist? If so, I need accurate frequencies for the NYC DOITT system. I've tried the ones supplied in the Trucktracker booklet supplied with the BC245XLT, only to get mixed results. Then I tried ones from Trucktracker.com and Police Call, only to find out that I got new IDs, but not the old ones I was receiving using the frequencies in the Trunktracker booklet. Any help would be appreciated thanks.

look also at Radio Shack operation of the pro 2020 scanner, for a little more info. Most similar old scanners have the same operation. It is pretty simple.
The AM is not selectable, you have to go with what they set it up for. Most of the time that will not be a problem.

If you need to change the AM and FM, you can get a scanner that will, such as the pro 2006, for about $200 used.

Happy scanning!

You can use 50 Ohm cable like RG58 if you want, but your scanner won't know the difference between 50 & 75 Ohms.

Thanks JC, you are the expert on these things as you can sell all kinds of european scanners, and the step is critical to me.
Some guys never get it, and think their scanner is still blocked because it only gets 30 khz increments! Ha!
And many buy unblocked scanners that cannot do 30 khz, they do 12.5 steps, and you get in between the real steps, so you have not only bad reception, but you also have to keep going up and down to see if the other "off" step frequency is any better!

Best thing to do is read and learn, then buy about 20 scanners and find out for yourself.

Happy Scanning!

1569. Desktop hand held scanner holder??

Newsgroup: rec.radio.scanner
Date: 2001-07-10 02:56:56 UTC
From: HornSmoke <omega@powerlink.net>
Message-ID: <3B4A6EF7.9142FDDD@powerlink.net>
Source record: 63186
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Radio Shack (over 5 years ago) sold a desktop holder for hand held scanners, replete with BNC connector. I crafted a functional one out of a metal book end by wire wrapping a small external speaker to it, and bent the brace at the appropriate angle for the scanner to "sit" on. Still, I would like to procure a "professional" one.

Best to all,

Loren Fields, N1UMF

I recall the Whamo was manufactured by Regency somewhere back in the mid seventies. Your correct frequencies were programmed with some sort of miniature comb but I'm really unsure how it was done. Regency did offer a digital VFO as an accessory to the Whamo scanner, a horrendous looking six digit mechanical device that would allow you to enter in a single freq. I believe coverage was VHF Lo/Hi and UHF.

Not sure if it's much of a collectors item, I occasionally see them at swap meets fetching $10-$15.

let me fix this. damn space bar is broke.

gee, you see people always wanting a 800 Mhz scanner. If someone wants the old
800 Mhz analog system to listen to. It is easier just to get a
canadian/eur/aus model.or damn why not just get a cell phone. throw it in test
mode and receive all the analog signals anyways. simple and most of us have
those old phones too.

Source record: 63190

huh drop 50 ohm coax for a 75 ohm. I am lost here. you get a better match for your scanner if you have 1) 50 ohm antenna and 1) 50 ohm scanner.why waist money on 72 ohm rg 6. I would say if you want to match and gonna buy rg 6. buy beldens rg 8. not radio shack rg 8 like most do. if you want hardline. go get some rg-213 or double sheilded rg-214 army stuff. 69 cents canadian and all 50 ohms.

1576. Off Topic:William/Bill/Zachary Guinn - help needed

Newsgroup: rec.radio.scanner
Date: 2001-07-10 09:39:14 UTC
From: Douglas Coull <dougcoul@freenetname.co.uk>
Message-ID: <n3ilktgmeoqd83jnk4sgsosj84oevhruve@4ax.com>
Source record: 63192

Hi Folks,

Sorry to be off topic but I'm hoping someone can put my mind at ease.

I arranged a second hand purchase with "william" <bill.guinn@mindspring.com> and sent off a cheque/money order over two weeks ago. As I'm in the UK - Scotland - I appreciate there is a risk factor here.

However, I scanned the cheque and certificate of posting, stamped and signed by my local Post Office, and e-mailed these to "William" so that he at least knew I had completed my end of the bargain in good faith.

He advised he wouldn't ship the item until he had the cash - fair enough.

I checked with the Post Office here in the UK, and they advised 5-7 day delivery for the USA but two weeks have elapsed since posting. I go on vacation in a few days and if there is a problem I want to take steps to have any lost mail investigated before I go. To be honest I wanted the item to take on vacation with me.

I now have had no response from "William" to my last three e-mails to him on 5th, 6th, and 8th so am getting more than a little concerned.

As the cheque was made out to a 'Zachary' Guinn and to a box number, this also makes me nervous, albeit they're is probably a good reason for this.

So I'm hoping that someone on the group has dealt with "William" before and can allay my worst fears.

I must stress that this request in no way calls him in to any disrepute, and there may be genuine reasons for not getting any responses, but I'm sure you will appreciate my concerns.

I'd be pleased to accept any replies direct if anyone would care to get in touch.

Many thanks, and again apologies that this request is off topic.

Regards,

Dougie

This now looks like a regular scam, so hopefully this information will save others in the group the pain. I'll also advise other 'radio' related groups as well.

Could I please ask anyone who has fallen foul of this individual to contact me direct with details of their situation, and also any action they have taken. Any information will be in strictest confidence.

I'll be pleased to co-ordinate so we bring this guy to justice once and for all.

Many thanks for your time.

I modified a plastic brochure holder I got from an office supply store.
Cut the front out for the keys it stands nice on a table and has a slot
for hanging on the wall so it
hangs right here by the computer.

In article <9ie04k01v71@enews2.newsguy.com>, "Dev" <.> says...
> huh drop 50 ohm coax for a 75 ohm.

Yes, just like Channel Master the antenna mfg does. Also recommended by many in the scanning field who know.

> I am lost here. you get a better match
> for your scanner if you have 1) 50 ohm antenna and 1) 50 ohm scanner.why
> waist money on 72 ohm rg 6.

First, NO antenna will give you a 50 Ohm match. It might on a few frequencies it is cut to but that is it. Even a discone when viewed with an antenna analyzer has a impedance that goes up and down like a rollercoaster and only passes 50 ohms on occasion.

All this "must be 50 ohms" comes from transmitters which have to see that 50 or they puke! Receivers are not near as sensitive or you would be tuning a radio with mostly dead bands.

> I would say if you want to match and gonna buy
> rg 6. buy beldens rg 8. not radio shack rg 8 like most do.

Have you ever looked at a coaxial loss chart? If you did you would realize RG-8 made by anyone SUCKS for VHF/UHF on anything but short runs. RG-6 double or triple shield is one of the best bargains and coax for the scanner listener. Do the research!

> if you want
> hardline. go get some rg-213 or double sheilded rg-214 army stuff. 69 cents
> canadian and all 50 ohms.

And waste your money! RG-213 is barely better than RG-8 and certainly isn't even close to hardline characteristics. Not even close and certainly a real POOR choice for VHF/uhf. Even RG-6 has better loss characteristics than rg-213! LMR-400 is much better than both. Do some research! Here I'll help you get started.

http://www.radio-ware.com/products/techinfo/coaxapps.htm
Read the Scanners (VHF/UHF) at the bottom.

http://www.radio-ware.com/products/techinfo/coaxloss.htm

Hope this clears things up..........

For receive only it doesn't much matter about the impedence.
I believe Glenn suggested what he did by looking at charts of loss per
100 foot
at different frequencies. RG-58 is horrible (remembering that I had
last looked
at the charts 15 years ago). RG-8 wasn't much better. You want stuff
that works
at UHF frequencies and still has shielding. Maybe visit www.belden.com?
I have bought RG-59 and used it successfully. I've used antenna-mounted
broadband
preamplifiers, but haven't found much useful gain in a metro
environment.

http://bwcecom.belden.com/college/Techpprs/tpvutp85.htm talks about
broadband
analog video towards the bottom. That's pretty much in the same
frequency ballpark
as most of your scanning.

I am selling my GPS.
I have a Garmin GPS III Plus in EXCELLENT condition.

I am including the following accessories that I purchased with the
GPS:

PC Data Cable (I think this came in the Box)
Cigarette Lighter plug power cable.
Remote mount antenna.
Mapsource US Roads & Recreation.
Garmin carrying case.

I paid $600 for all of the above and I need to sell ASAP!

$200 .

I recently purchased a Pro-46 on ebay for $70. It has the exact same "Test Mods" as the Pro-51. Using the "test" function, I was able to program in all 50, or so Cell freqs that are active in my town. No screwdriver, no soldering iron!
I'm assuming that people are buying the Pro-51 to be able to listen to cell.

I must add, at this point, that I live in Canada, & it IS NOT ILLEGAL to listen to those freqs here (so far!).

KC8BQR <hgtsrecycling@peoplepc.com> wrote in message news:3b487884@flexnet239.uunt.net...

Tip leads to arrest in Farmington theft

By BETTY JESPERSEN, Staff Writer

Copyright ï¿½ 2001 Blethen Maine Newspapers Inc.
E-mail this story to a friend

FARMINGTON ï¿½ A robbery suspect who police said took money from a cash register at Mr. Paperback on Wilton Road on Monday and then fled was arrested after being spotted by a vigilant West Farmington resident listening to her scanner.

Arrested on a charge of robbery, a Class B felony, was Shawn Griffen, 32, of Jay. The charge is a felony, because Griffen reportedly used force
to push his way past the clerk as he ran from the store, said Farmington

police Officer Christopher Chase.

Griffen is being held in the Franklin County jail with bail set at $25,000
cash or $50,000 worth of property. He is expected to be arraigned in Farmington District Court Tuesday.

Chase, who had been on patrol in the area, arrived at the bookstore in less
than a minute of the noontime call. When he realized the man had fled on

foot into the woods behind nearby Fyfe Road, he called for assistance.

A total of seven officers from Farmington and the Franklin County Sheriff's Department assisted in tracking the suspect.

Chase said he did not know the amount of money taken.

The cash was stolen after the sales clerk stepped away from the counter to help a male customer, later identified as a friend of Griffen's.

The clerk told police she saw a man at the cash box and rushed back, only
to have him run past her. She reportedly yelled and tried to block his way
with her arms, but he pushed her aside, Chase said.

The clerk followed him for a way on foot, and saw him rip off his shirt that

had a distinctive design on it and run into the woods.

About 45 minutes later, a West Farmington resident whose home is on Temple Road, north of Wilton Road, called police with a tip.

"Someone who was listening to the scanner saw a man meeting the description walking through the backyard and heading toward Maxwell's Market," the officer said.

Maxwell's is at the intersection of Temple Road, also known as Route 43,

and Town Farm Road.

Deputy John Black picked Griffen up. According to Chase, Griffen's friend was also stopped and questioned as he walked east on the Wilton Road towards downtown Farmington.

CNN NETWORKS:

Calling all ham radio operators

July 10, 2001 Posted: 11:30 a.m. EDT (1530 GMT)

By Dan Verton

(IDG) -- The System Administration
Networking and Security (SANS)
Institute is recruiting amateur radio
operators to take part in an
emergency communications network
that it said could be used by disaster
relief personnel in the event of a
catastrophic failure of
telecommunications systems,
including the Internet.

In its weekly newsletter this week,
Bethesda, Md.-based SANS asked all
interested ham and packet radio
operators "to take a leadership role to
help establish and maintain" such an
emergency backup communications
network. Interested parties can contact
SANS, a research organization for
systems administrators and security managers,
via e-mail at info@sans.org.

There are approximately 600,000 amateur
radio operators in the U.S. and 2.5
million around the world. Ham radio operators,
as amateur radio operators are
popularly known, must obtain a license from the
U.S. Federal Communications
Commission and are encouraged to provide
emergency communications during
natural disasters and national emergencies.

Jim Haynie, president of the American Radio
Relay League (ARRL), a Newington, Conn.-based
organization that supports the interests of ham radio
operators in dealings with the government, said the

SANS proposal is a good one and in many ways similar to what amateur radio operators have been doing since the first licenses were issued in 1912.

"There is a network that can be marshaled if needed," said Haynie, referring to the potential of a terrorist attack or natural disaster to cripple large portions of the Internet and the telecommunications grid. "If the Internet went down today, it wouldn't change my life one bit," he added. "It's nothing for me to go in my ham shack and flip one switch and talk to New York or Bulgaria or Ukraine."

The ARRL estimates that there are about 275,000 "hardcore operators" who could swing into action if needed, Haynie said. "But to back up the entire infrastructure is a pretty tall order," he cautioned, noting that the use of ham radio operators in this fashion wouldn't mean the instant restoration of Web browsing capabilities or Internet e-mail capabilities.

Instead, Haynie said, the ham radio network would be strictly used for passing emergency voice and data communications between government officials at the local, state and federal levels and the public.

The ARRL is a signatory to several memorandums of understanding with various federal and private relief agencies, including the Federal Emergency Management Agency and the Red Cross. In fact, many of the ARRL's 175,000 members have actively supported federal emergency response operations during many of the most recent disasters and crises.

During the flooding that ravaged parts of Texas last month, for example, the FCC set aside a band of frequencies for use by ham radio operators to support federal relief efforts, Haynie said. Likewise, the radio operators were called into action after the 1995 blast that destroyed the Alfred P. Murrah Federal Building in Oklahoma City led to an overload of the cell phone network.

Alan Fedeli, director of emergency response services at Atlanta-based security software vendor Internet Security Systems Inc. (ISS),

applauded the approach suggested by SANS
and said any attempt to establish alternate
communications channels should be supported.

David Curry, manager of business strategies at ISS,
pointed to outbreaks of Internet and e-mail worms
as prime examples of the need for such an alternate
network. Many companies simply pull their systems
off the Internet when that happens in order to prevent
the worms from reaching them, according to Curry.

"People's reaction was to unplug the network," he
said, referring to several such incidents. "The
problem is that the people disconnected themselves from the
source of information about the problem."

Give us a break!
Ham radio is a hobby for children to play with radios.
It has nothing to do with emergencies.

They don't call you guys hams for nothing.
Stay out of things you know nothing about.

I'm putting a mobile scanner (trunk tracking) in my auto (it's legal in St. Louis.) and need recommendations for a good working mobile antenna for the 800 mhz band - direct or mag mount is okay.

Please reply here in the group

Thanks!

PG

1619. ICOM IC-R8500 - TV-R7100

Too many radios! Purchased earlier this year-
opened box, checked receiver out, back in box.
TV-R7100 never used.

All as new:
ICOM IC-R8500 receiver*
(*full coverage 100 kHz to 1999.99 MHz)
TV-R7100 TV/FM adapter
RS-R8500 Remote control software
SP-21 speaker
All boxed w/ manuals

$1,500 with TV-R7100 or $1,275 without.
TV-R7100 seperate- $225
Buyer pays shipping CONUS

Hi Folks,

I've just received an e-mail from Mr Guinn advising that he is sending
back my check.

On RECEIPT of the check I'll post to let everyone know.

Many thanks to all who offered support and also passed me details of
their own circumstances.

Cheers.

Regards,

Dougie

Obviously you know nothing of what your talking about.
How about if you read back your last line to yourself and practice
what you preach. While your at it, try doing some research on
the subject matter. You just might learn something.

I have one incredibly clean IC-R7000. This radio covers 25mhz to
999.99mhz and 1025mhz to 2000mhz.
It is unblocked because it was made before blocking the 800mhz band was a
law.
It has many scanning perameters that you can set up, 100 memories.
It does not come with any of the options such as voice synth, remote or
Television adaptor.

I would like $550 for this unit. I will ship anywhere in the 48 states.
Picture available on request.

Does anyone know if there are any scanners or computer software
that can decode transmissions between GSM mobile phones
into voice audio.
Last year a scanner "UBIK 2000" was for sale in Sweden,it
was bought in Asia,and the seller of this scanner said that
he could listen to GSM conversation with it,the price was
around 2500 US dollars.Has anyone heard of this scanner?
Or any other scanner on the market?

Not true, HAM radio is a serious form of communication around long before the internet and unlike the internet, it works
without the need for routers and hubs which fail and knock huge portions of the internet out, which we've all experienced.
Also, HAM radio is commercialism free, not dependent on cell phone outages etc.
On the other hand, I agree, HAM radio operators are usually overgrown toddlers who like to play "official" and play "important"
when they are mostly a bunch of pathetic mentally or defective freaks, but indeed they do serve a major important role when it
comes to emergencies which might be the only reason these pathetic people were sent to the earth in the first place, to be small
time heroes if only for a few days on their radios.

I just received notification from my ISP that I "spammed" this newsgroup by posting a For Sale message recently. Is this against the rules for this newsgroup?? When did this group become moderated and who is the moderator? If this group IS moderated why haven't the rules been posted recently? ANd can the rules now be posted?
I am quite concerned over this as I can lose access to my ISP for something like this.

Thanks, Denis

Source record: 63047

I love a cable fight...

Most RG8 is lower loss than most RG6 at all frequencies and for most manufacturers and models.

Belden 9913 and Times Microwave LMR-400 are comparable to each other, both are better than RG8. LMR-400 is slightly less lossy than 9913. Belden 9913 is rather stiff and hard to work with, LMR400 less so. LMR-400 can be bent around a tighter corner than 9913. 9913 has a semi-hollow insulation. As a result, connections must be carefully sealed to avoid water infiltration.

RG6 is often suggested because it's considerably cheaper than RG8. The longer the cable run and the higher the frequency, the better quality cable you should use. If you do much 800/900 Mhz listening and your cable run is over 20 feet I'd urge you to consider good quality RG8 or better. RG6, the "quad shield" variety, can be used in a pinch. RG58 / RG59 have fairly high losses at 200 Mhz and up and should be avoided when possible. If you are shopping for RG8 look for foam insulation, 100 percent combined foil and braid shielding and a solid copper center conductor.

The impedance (Ohms) of the cable is not a factor for receive only work. A "U" designator means the cable jacket is designed for underground burial.

I've found that radio shack cables tend not to hold up as well in direct exposure to sunlight as compared to Belden cable. All RG8 is not the same, the best Belden RG8 has uhf/800 loss factors which are lower than radio shack cables. Use as few adaptors as possible at all connection points, they also create signal loss. Use good quality "N" connectors whenever possible. If you can't use "N", use "BNC". If you can't use "BNC", use "F" video connectors. If you can't use "F" video connectors, use PL-259 ("coaxial) connectors. PL-259's aren't terrible, but they were only designed to work well up to 500 Mhz. At 800/900 Mhz they also become "lossy".

>Have you ever looked at a coaxial loss chart? If you did you would
>realize RG-8 made by anyone SUCKS for VHF/UHF on anything but short runs.
>RG-6 double or triple shield is one of the best bargains and coax for the
>scanner listener. Do the research! (Glen Hansen)

-This is totally wrong. RG6, on average, has slightly HIGHER loss rates than RG8. RG6 isn't terrible, and as he points out, it is cheaper, but it is NOT better cable to use. Glen's chart compares RG8X, which is a half-diameter cable, it isn't RG8 or RG8U. In truth, you might not notice the difference between RG6 and RG8, but to say that RG8 "sucks" in comparison to RG6 is wild mis-information, it's actually slightly better.

www.belden.com

Belden 8215 = RG6 Video Cable has 9.8 Db's loss at 1000 MHz per 100 Ft
Belden 1152a = RG6 Quad shield has 7.1 Db's loss at 1000 Mhz per 100 Ft
(this stuff isnt cheap, either)
Belden 8214 = RG8 Foam Low Loss has 7.0 Db's loss at 1000 Mhz per 100 Ft
Belden 9913 cable has 4.5 Db's loss at 1000 Mhz per 100 Ft
Times LMR400 cable has 3.9 Db's loss at 900 Mhz per 100 Ft

Times microwave shows military cable M17/2, RG6 equivalent, as having 9.4 Db loss at 1000 Mhz per 100 feet as "typical".

Even when we go to "pro" cables like Andrews 1/2 inch foam FSJ4-50B, 1000 Mhz at 100 feet shows 3.6 Db loss, and this stuff isnt easy to work with or string.

It's not fair to toss out charts when the manufacturers are not the same. Not all manufacturer's products are comparable. And even within one manufacturer different product lines will exhibit different loss rates. I would find suspect someone who tells you their RG6 cable has a loss rate of 6.1 Db's at 1000 Mhz per 100 feet, unless it's highly specialized RG6. And then it's going to cost about the same as RG8, so no real saving. I checked a half dozen quad shield rg6 manufacturers pages on the web, the average loss for RG6 at 1000 Mhz I found was about 7.5 Db's for 100 feet.

Happy scanning! - Ted Moran / CARMA

Hi Folks,

In view of my recent disappointment, if anyone has one for sale at a
reasonable price, I'd be pleased to hear from them.

Many thanks.

Cheers.

Regards,

Dougie

I can tell you know nothing about hams and how they enjoy their
hobbie. There are way more 'mentally defective freaks' that use this
newsgroup that won't have a clue to what's going on when the shit does hit
the fan.

[...]

The last sentence is the crux of the matter. For example, One of the antenna toys I get to play with is a 60 foot parabolic antenna on a government site. As is usually the case with govt sites, the area is strewn with discarded equipment, including some old RG-8. I needed some braid for a ground strap so I grabbed a length and found multiple layer braid shields over dielectric that had survived pretty harsh sunlight.

Clearly this was NOT your Radio Shack RG-8. I bet when it was new it could beat out today's Belden 9913/flex as well in terms of lossiness. (The Belden has better shielding, though.)

With the general lack of traffic in this group it's amazing that anyone
would complain about one for-sale message, but someone did.
Obviously someone in serious need of better things to do.

Don't worry about the notice though, especially from @home.
When they receive a complaint their system automatically spits out
a warning. There's no way you will lose your account unless you're
doing mass mailings of spam.

Ham operators have been dealing with communications in emergencies at least since the '50s in America.

The police often use them when the phone system is down since police radios are of a local nature.

Either you are a troll or you are displaying your ignorance.

I prefer to think you are a troll. You may come to your own conclusion.

Actually, it was my interest in Amateur Radio that started my
electronics service technician Career.

At which I worked for 30 years, making a decent living and providing
much needed services to communities all over (in electronics, not
radio).

Amateur Radio, for some, is much more technical than throwing a switch
and yapping into a microphone.

So maybe I stared -out- as a kid interested in gizmos and knobs and
dials, but my involvement with HAM actually lead to something useful
and productive, as, I am sure, is the case with many ARO's.

Then again, I agree that some people shouldn't be allowed on the
Amateur Bands, as I observe, some people shouldn't be allowed on
Usenet.

All real RG cables are "U"

It designates them as conforming to the Universal system of numbering cables. Even tiny little cables intended only for interconnection inside equipment carry the "U" suffix - for example RG-174/U.

All approved Co-ax Connectors also have a "U" attached for the same reason. Ie. UG-296/U (SO-239) and UG-295/U (PL-259) which most assuredly were not intended for Underground burial.

Some cables carry the label "RG-XX type" which means they are something like a real RG-XX but do not necessarily meet the real RG spec. A good example is some of the "RG-8 type" stuff around. The RG-8 specification was replaced with RG-213 something like a quarter of a century ago.

If you want underground cable check the manufacturers catalog for those which are designed for burial. Remember there are all sorts of variations on a theme - for example RG-58/U comes in A, B, C, etc. versions depending on the type of conductor, shield, insulation and jacket.

Got to a ham radio show and look at all the freaks.
Man, you've got wheelchairs running all around, people with half
their heads and faces missin, arms blown off, legs up their butts
and if you take a good smell, apparently allot of them have a problem
shittin on themselves. You cannot tell me that hams are a freakshow, or
maybe the HAM shows I've attented for the last 10 years was just for freaks?
The reason HAM's become HAM's is that they usually need something to do with
their lives as a form of social contact. If you are missing half your face, or you crap
your
pants, chances are you are not going to be very social, thus you become a HAM.
Oh but now, look at us, we are doing the same things HAM's are doing. I wonder if ur
a freak! I know I am! :)

Hi,
Try consulting your local library,and look for copies
of the ARRL's"The Radio Amateur's Handbook".An antenna for
440 MHz Amateur Radio band is almost exactly what you are looking
for.But these can be made in a lot of different ways.As simple as a
vertical dipole,or a ground-plane(both omni-directional). Or a multi
element beam, quad,yagi,etc.for directional use,with maybe a rotator.
The equation for the length of a dipole, is length(in feet) =468/MHz.
So for a 450 MHz Vertical dipole.Take a 1.04 ft long piece of
wire,snip it in the middle,attach your feed line there.Tape or tack it
to the wall verticaly,try to keep the feedline/coax at a right angle
to the antenna,and you have a 450 MHz vertical
dipole(omni-directional),ready to go.Almost free.
Of course,for distance,you will need height,as much as possible.

Anyone know if there are any mods that can be done to the pro-2050 trunking scanner? I was told that it can be made to receive signals under the 30 mhz floor.

Am I trolling? I thought I was just being honest as I really don't care to get a reaction. I just enjoy speaking freely
as I sure the hell can't get away with it in real life. Free speech on the internet is a godsend. Instead of holding all my feelings
inside I can blow them out, no matter how nasty. Better to speak freely than to run around shooting people freely in my frustration
of life in general. I think the internet is very therapeutic.

This is a very fine, very sophisticated high end radio receiver. It is as close to a professional grade portable as we will get for the price range.

It is very complicated to operate and NOT for the beginner.

>Would anyone reccommend this scanner for it's general performance hooked up to a good base antenna in high intermod urban settings<

While I don't have a external antenna, I am almost downtown Tulsa Ok (a bigger city than most think) and the 895 does as well as my 2004 and 2006. I have no problems with any of them. Several other scanners including a Pro-34 were worthless in my location.

Hello,
For what it's worth, SANS is a very low key US Government sanctioned organization that educates companies on how to defend against "information warfare". Their courses on how to "catch" hackers are given by some of the best analysts in the US military. One SANS course I attended had 250 people from all over the world including government agencies from other countries. Bill Clinton called in SANS when he wanted advice on how to prevent denial of service attacks like those that crippled e-bay and Amazon.

If SANS wants ham radio operators for emergency ops, you can bet that they are extremely serious about setting something up. They have a web site at http://www.sans.org .

The city where I live in Central California has a population of
about 26,000. I think it has 2 paid fire fighters. All the rest
are volunteers. They seem to do a pretty good job, too. In fact,
being a volunteer fire fighter is very prestigious here.

Yup... a very few did. Primarily women in fact. Which the media covered
to death. So... do you have a problem with a few bad actors, women, or
reservists in general?

This was down the road from my wife's childhood home! Goes to show you the good things that happen when scanners are present, and DES isn't. This makes a strong case for extreme limited usage of encryption.

We drove up by there just this past Sunday to visit her parents. Yes, I do monitor Franklin SO and Farmington PD when in the area! Never know what might happen.

Thanks for the post!

for sale:

99 channels
ctcss codes,
dcs codes,
dtmf codes,
scan function
alpha tags
3 programmable power outputs 1,3,5 watts
these are highend units that can be programmed with the keypad or software
(included)
easily cloned to eachother with optional cloning cable (opc-444)

comes with good battery pack
software for programming
programming manual
leather holsters
new rubberduck antennas
new belt clips

presently programmed with 6 frequencies and they can talk to each other.

225.00US includes shipping via USPS insured

Price is each I have 2 units for sale

thanks

: Got to a ham radio show and look at all the freaks.
: Man, you've got wheelchairs running all around, people with half
: their heads and faces missin, arms blown off, legs up their butts
: and if you take a good smell, apparently allot of them have a problem
: shittin on themselves. You cannot tell me that hams are a freakshow, or
: maybe the HAM shows I've attented for the last 10 years was just for
freaks?
: The reason HAM's become HAM's is that they usually need something to do
with
: their lives as a form of social contact. If you are missing half your
face, or you crap your
: pants, chances are you are not going to be very social, thus you become a
HAM.
: Oh but now, look at us, we are doing the same things HAM's are doing. I
wonder if ur
: a freak! I know I am! :)

You would love my local club, Tippecanoe Amateur Radio Assoc. (TARA).
Lets see, we have a Electrical Engineering professor from Purdue who is one
the leading experts in DSP and consults with NSA. We have two software
engineers, two retire state police radio techs, a retired Army Signal
Warrant
who spend most of his career assigned to 5th Special Forces, plus a number
of other professionals. Yes, we do have many working class folks as well.
But this is a hobby that crosses class lines.

And many members of the club are heavily involved in volunteering with
either
Red Cross or the emergency management (TEMA). My county would not
have a strong volunteer base without the hams.

: Fat toothless and unable to get a real fireman's job so has to volunteer!
:
: > What a troll. I suppose you feel the same about volunteer firefighters
: > and Red Cross workers too?

I feel that it should be mandatory that every police and fire
department have a reserve force, much like the military has.
For one thing it would provide a means to screen applicants.
And, since most police officers do not stay beyond 5 years,
it would be a way to allow experienced and trained officers
to continue serving even if they chose other career opportunities.

Marion County Sheriff's department and the Indianapolis Police
department both have strong reserve programs. Both of these
agencies have over 2000 sworn officers plus nearly that many
trained reservists. The reserves go thru the same training as the
full timers. In fact the full time officers brag on how good the
reservists are. They like the fact that there are officers who can
patrol with them or even cover shifts if needed. And the reserve
force is paid.

The same goes for the USAR and National Guard. The active
components usually can not tell the difference when serving along
side a reservist. And the reserves are doing more and more active
duty missions (look at all the folks just serving in Bosnia who are
reservists).

The day of full time professionals doing everything is over. We are
going to be dependant on volunteers and reservists. Congress is
even looking at returning to the draft, mandating that every male (if
fit to serve) in the National Guard with service in the other reserve
forces, active components, police, fire or prison services being optional
avenues.

So get off you elitist high horse.

That sounds like an excellent idea. Also pass it on to the Reserve
Police officers who donate time, money and equipment, the volunteer EMTs
(hope Barry doesnt have a bad heart..or power tools...)

Pass it on to the volunteers at the hospitals the next of kin might drag
Barry to as well.

1687. Todays Shuttle Launch

Newsgroup: rec.radio.scanner
Date: 2001-07-12 14:37:38 UTC
From: av8tor@licensed4fun.com
Message-ID: <9ikcnh$41ec$1@newssvr06-en0.news.prodigy.com>
Source record: 62951

Today I made the trip to Titusville to view my first night launch of the Shuttle. I've seen day launches, but this is my first night launch.

On 6/29 Allan Stern posted a list of "Basic Shuttle Freqs" which included 3 2 meter repeater which would rebroadcast the Shuttle launch. This morning NON of theses were active (145.13, 146.94, and 147.15). Now at 10:30 EDT Shuttle comms are being rebroadcast on 147.27 (I don't know which repeater this is) but the three previously frequencies are still dead. You might want to update your lists.

Are Shuttle comms rebroadcast during early morning launchs such as today?

Also, I thought 148.485 would have the countdown status, I heard very few comms on this freq. I wouldn't have know where the countdown was at if it wasn't for the controller on 126.65 letting the pilot of th STA-Aircraft know.

If anyone has a more current list I would love to see one.

Barry,
Admttedly I am only the Disaster Preparedness Coordinator for our
community but we definitely plan to use "Hams" to augment our
emergency/disaster communications. In fact cities world-wide do the same
thing. I am not sure where you have been but it hasn't been working in
disaster management.
Russ

Nor was he in Oklahoma City after the bombing. I still have a
recording of some of the emergency comms from that incident.

> Specifications are typical; individual units might vary. Specifications
> are subject to change without notice.
>
> (IR-03/07/96)
==========

The key to this is in the last couple of lines "Specifications are
subject to change"
RG indicates a precise specification so the specification cannot be
changed. Therefore the stuff referred to above is an RG-6 "type"

RG-6 specifies:
a 21 AWG Copperweld conductor
Solid Polyethylene insulator
Non-contaminating Grey PVC jacket
Silver covered copper inner shield
Copper outer shield.
Nominal Impedance 76 Ohms
Capacitance 20pf/ft
Attenuation at 100MHz 2.8dB/100 ft.
Attenuation at 1000MHz 11dN/100 ft.

Doesn't sound a lot like the stuff specified above does it?

The Radio Shack spec is very similar to Belden "6/U type" but it is not real RG-6. For most of us it probably doesn't matter too much but a great deal of thought and effort went into the original specifications and now people just stamp RG-6 on something which is vaguely similar.

It could make a REAL difference if you were using it in applications like stub filters and matching sections where the variation from the RG specfication could significantly change the performance.

Dave

This issue has gone back and forth for some time and pops up fairly often,

IMO: if you post it they may buy it, not everyone uses Ebay or visits them
every day, so this is a venue to put out a note.

There is a Newsgroup:
alt.radio.swap , but not everyone uses that one either.

Spam was a lunch meat before the WWW, now its grounds to kick you off a free
Host Site as was the case with PB Scanner and XPage.

Single posts should not be a problem, those who make an issue are.

The only complaining I heard from reservists in '90 and '91 was from
people worrying about how their families were going to make it on
greatly reduced pay. Sounded like a valid concern to me.

I appreciate to those who replied. But I still want to know who has taken it upon themselves to complain to my ISP?
I have been in and out of this news group for about 7 years. This newsgroup has ALWAYS had For Sale/For Trade traffic. If someone out these objects SO much they are complaining to ISP's, then let them come forward to state their case. I WANT person-to-person trade here. But I also do not approve of this becoming an advertisement board for business and spammers.

Note: For @home users, I contacted the AUP staff. The technician was fairly supportive and acknowledged that this is not considered spam. Unfortunately to get details on each complaint, there is gonna be abit of a wait on hold to talk to these people. And there number is not toll-free.

Thanks, Denis

The group is not moderated. All groups expect you to stick to the intended purpose, but it is often quite hard to find out whether "for sale" messages are permitted in a particular group. You might reply to your ISP by pointing out that "for sale" messages appear fairly regularly here.

People will complain to ISPs whenever they see anything that they think is inappropriate. A responsible ISP will investigate before acting on the complaint, since opinions often differ.

I'm assuming your "for sale" message was about scanner radio equipment. If you posted something irrelevant, or if you cross-posted the same advertisement to numerous unrelated newsgroups, then you were indeed "spamming."

Actually, spamming originated with a rather disreputable law firm that managed to post the same ad on all 8,500 newsgroups back in 1994, right after the newsgroup system was opened up to the general public.

Anyone used any of the Rat Shack Mobile CB uniuts?
Are they any good?
Compare to Uniden or Cobra
Anyplace to look for reviews?
Thanks

Go right ahead and try. The next time a natural disaster strikes your
area, it's likely that amateurs will be involved. Sue away. Of
course, I doubt that you have the money to even have a lawyer tell you
you have no cause for action. God, I hate trolls but sometimes I
can't help myself. Sorry Gunner, I was tempeted past my ability to
withstand.

1725. NYC Surface Transit Trunked System: Fleet Map or Not?

Newsgroup: rec.radio.scanner
Date: 2001-07-13 02:45:16 UTC
From: TheF16Falcon <thef16falcon@si.rr.com>
Message-ID: <0ht37.3700$I5.716678@typhoon.nyc.rr.com>
Source record: 62986

Is the NYC Surface Transit Trunked System a II system or IIi hybrid? If so, does anyone have the correct fleet map?

For those interested in guidelines about posting For Sale and For Auction item in Usenet Newsgroups should read ftp://ftp.faqs.org/faqs/usenet/advertising/how-to/part1. Since this group does NOT have any written guidelines, then this is the procedure you should follow when making posts of this nature.

Almost everyone was complaining (wailing) about something. If it wasn't about bad food, it was the heat, the living conditions, the locals, or something else. Of course, that is nothing out of the ordinary - soldiers and sailors have been complaining probably since the creation of the first army and navy. So, why would you hold reservists to a higher standard?

In my opinion, criticism of reservists by full time personnel is nothing more than an attempt to make themselves feel important by putting somebody else down. Whatever the case, that attitude is very counterproductive in a military that is dependent on it's part time personnel.

The stock 245 pack is 800 mah, the replacement is 1600. Try twice as long,
as it's twice the size. Instead of 14-16 hours, try 28-32 hours.

In short, the legal departments of many ISPs require them to send
such "warning" Emails. They a really pulling to old "washing their
hands" routine (i.e. "We didn't have anything to do with his selling
that scanner").

But, there is no way the ISP wants to give up the 20 plus bucks a
month you are probably shelling out for their services, so I would
simply ignore it.

Yes, he is talking to you. And he is right. Many hams are disabled from various wars, and other 'accidents'. Ham radio is a good way to spend a lot of extra time. 'Me', you are an insensitive fool. I just hope you have a problem down the line. Give you a feel for how it is.

It came to me suddenly last night. This guy can't pass the test.
That's where all of the bitterness and anger come from. He went to
hamfests when he was still a hopeful candidate! Eight-year-olds can
pass the test. My fourteen-year-old can pass th test but this guy
can't. Bwahahaha!

Yes they are. CHP's Blue, at least here in Southern California, is
often a very interesting frequency to monitor, as pursuits are often
handled on it, as well as any Sig Alert notices.

Speaking of which, many, MANY years ago the Georgia State Patrol was on 42.02 MHz. Does anybody know if they are still using that frequency for anything? My impression is that they are mostly in the 155-MHz band now but I'm just wondering. I still have the Hallicrafters receiver that my father (a Treasury agent) bought in 1965 in order to monitor the state troopers.

Sorry about the lateness of this post, but when I saw mention of Volunteer Firefighters and had to respond to the original poster!

I am a Volunteer Firefighter and also a Amateur Radio Operator, and I got into the fire service in a volunteer manner because I believe in the township I live in and wish to serve it in some manner or another. I am definitely not a fat toothless and unable to get a real fireman's job. I have a normal full-time job and could get a full-time firefighter's job if I wanted it. Most all V.F.F's get involved because they wish to serve their community, nothing more, nothing less. If our township had a better tax base I would be a full-timer with my department!

Sorry.... I know the original guy was just "trolling" but this one I had to comment about.

> and stuff?

They're on low band, yes. Not necessarily at 42 megs. There are beginning
to be repeaters up, at least in some areas, instead of the old base/mobile
duplex setup.

San Diego County, for instance, uses: (all repeater outputs)

39.400 'Orange' San Diego (87 units)
39.600 'Gold' El Cajon (109 units)
39.800 'Tan' Oceanside (92 units and 115 units)
39.140 'Blue' channel - Backup and special ops.

Inputs are still on the old mobile channels

This may be overly obvious, but you can watch NASA TV (and of course this includes listening to their audio) via the Internet. There tends to be more video than audio. When I watch NASA TV, usually I would have BBC-WS audio playing at the same time since there may be little or no audio for 15 minutes at a time on NASA TV.

http://www.nasa.gov/ntv/ntvweb.html
http://www.broadcast.com/learning_and_education/science/space/nasa/nasa_television/

Even the 56kbps version isn't that bad, although it would certainly plug up any further browsing if you're on dial-up. If you have DSL or Cable, then you can go for the higher bandwidth and still browse.

Enjoy.

I've a Pro 2004 scanner from Radio Shack and it's broken. I need desperately the electronic chart to find the problem and to fix it to.It's the old model like 1989-1990.
The problem is when i listening the scanner, something happen like a powerfailure and it takes few minuts to restart.
Where can i find the electronic chart?

Many thank's from Quebec,

girardyves@videotron.ca

GSP is still licensed on that frequency, they just don't use it. The
operate on:

F1 - 154.6800 base 154.8000 mobile
F2 - 154.6800 mobile 154.6800 mobile
F3 - 154.9350 base/mobile
F4 - 154.9050 base/mobile

In the Metro Atlanta area, they operate on 155.9100 (repeater).

1770. BC895XLT VS. BC780XLT

Newsgroup: rec.radio.scanner
Date: 2001-07-13 21:33:23 UTC
From: Chris Emerson <emmy412@earthlink.net>
Message-ID: <DOJ37.1452$23.174051@newsread2.prod.itd.earthlink.net>
Source record: 63035

Is the amount of channels the only difference between the BC895XLT and the BC780XLT?

Also, can anyone explain what a "trunked system" is. Apparently you can only listen to a "truncked frequency" or a conventional frequency at one time. You can't listen to both at the same time...

PS: thanks for the earlier replies about finding a good scanner...

Thanks

Chris

Yes, there are for sure but it will cost you a little fortune.
You could try CCS but I believe they only sell customized testing
equipment at inflated prices. I was told they resell German-made
equipment "as-is".
www.gcomtech.com

If you want the real thing Rhode & Schwarz (www.rsd.de) and Agilent
(www.agilent.com), a subsidiary of HP have the engineering capabilites
but might not sell to individuals. And if they do it will come at a
price.

I have also heard (unconfirmed) reports that these companies will also
manufacture such equipment
www.sdsinc.ca
www.spytec.com

This kind of activity usually involves heavy stuff (not quite the pocket
scanner...) and has been restricted to law enforcement, mainly for cost
reasons.

>
>I said they were worrying, not refusing to serve.

To be accurate, you said they were complaining- and worrying. But
if they had paid attention when they signed up, they would have
known they had no basis for complaining. They weren't drafted.
As for how their families would get by on reduced pay- didn't they
consider that possibility when they joined? Or did they join and
agree to be available for something like the Gulf War, but assumed
that it would never really happen? As my dear departed father
told me- never trust the Federal Government. Don't trust it to do
what you hope it will do, or what it should do.

Are you referring to Raleigh, NC ?

If so, and you don't get a response here, try reposting on the Carolinascanner list on Yahoogroups.com.

There are many hobbyists in the Wake County area, including a hobby group that meets once-a-month.

An inquiry on Carolinascanner will get some responses.

Fantastic response Ryan. I also have been in emergency services, I started in 1961. I have worked in police, state and federal fire fighting and ambulance services. I held position from Fire Chief to Ambulance Commander, etc.. I was appointed hard of the EMA in my community by our Governor in 1986 and continue too hold that position today. Along with our local and county radios in my command post I also have amateur radios. The hams in our county have come to our assistance on more than one occasion and we truly appreciate them.

By the way, I have had my ham ticket since 1974.

You should be thanking military reservists for your freedom. If it weren't
for reservists like myself & others, you would not have the freedom to
make a fool of yourself like you do here on the internet.

The only time any reservists may have "wailed" was at losing probably 1/2 of
their
income when they were called to activive duty, yet still having to cover a
full
house payment & support their family. So the thanks you give reservists is
to put your mouth in overdrive.

Remember, the regular US military has NEVER won (or even fought) a major
battle or war without calling in the "Pros" (reserves). They simply can't
do it without the "pros" (reserves)!!!

The only time any reservists may have "wailed" was at losing probably 1/2 of their income when they were called to activive duty, yet still having to cover a
full house payment & support their family. The reservists still went & did their
duty!! So the thanks you give reservists is to put your mouth in overdrive.

Remember, the regular US military has NEVER won (or even fought) a major battle or war without calling in the "Pros" (reserves). They simply can't do it without the "pros", they need the reserves to show them how it is done.

Radio Shack "sells" the battery, BUT, it's not a stock item. They have to order it via RSU. You can get a NiMH replacement pack from Primecell for $24.95. It's rated at 1650 mah compared to 800 mah for the stock unit. Here's the link to their site: www.primecell.com

This is correct. In So.Cal, CHP has taken over old LASO frequencies on 39MHz, with repeaters, so that you can hear both sides of the traffic. Check the latest issue of Police Call for frequencies.

Regards,

Doug Gavilanes
Garden Grove, CA.

Please read this carefully: I didn't ask them to be in the
reserves. I didn't order them to the gulf. While in the gulf,
they weren't defending the United States. They were enforcing the
Pax Americana- a different kettle of fish entirely. I do not owe
them any thanks for doing something I oppose. When the Iraqis
land on Monterey Bay and the reservists and NGs throw them back
into the sea, I'll be very grateful. If me "putting my mouth in
overdrive" by reminding them of what they agreed to bothers you,
TFB.

I'll sure take your word on that. It has nothing to do with
reservists and NGs complaining about the government holding them
to their terms of enlistment. Lesson- read before you sign.

Has North Net switched frequencies, IDs, or have they gone digital? I haven't heard anything out of any of the North MetroNet stations (Anaheim, Garden Grove, etc.) in days, but the OCFA system and Central Net / Santa Ana is coming in fine. Any help appreciated.

Regards,

Doug Gavilanes
Garden Grove, CA.

Hello - I've a serious problem!
First , I 'll introduce myself,I am a Amateur from the Netherlands .
So, maybe you can help me out?
I am looking for a specific type of manual, as the original
manual for the Yeasu FT530. What I really want is a copy of the
manual , it may allso in some sort of digital format, preferably Adobe
Acrobat PDF format or just in microsoft-word.

If you do has these resource, access to someone who does, or can
otherwise assist, I'd be interested in exchanging some email-
P.S. sorry for my verry bad englisch language!

There was a fire in dallas that caused a half a million dollars in damage. Click below to go the the site. 10 Pics of the house on fire! Then 16 pics of the inside of the house after the fire. Look at the 6 inches of water in the living room. It is a mess. Sign or send e-mail and let me know what you think. Thanks Jason
